A bit over 600,000 according to the latest figures.

>I'm vaguely upset that for administrative reasons they chose to charge
>the ten years in advance. I can imagine a young ham having some
>difficulty scraping up that money, but if you are like me, or most of
>my ham buddies, kicking in the $70 for a new ham's license would make
>a great "welcome to ham radio" gift. Go without a new doodad for a
>few more weeks.

But the charge is ONLY if you want a "vanity call." There's still no
charge for the regular ham license and a call assigned from the
regular pool. So NOBODY has to come up with $70 for a ham license.

: Tsk, tsk, such is the price of cliquish exclusivity.

The price of cliquish exclusivity? We got some Com-spec tone encoders for
$26 a piece. They can be programmed for 42hz to 125hz, all non standard
tones.
The repeater itself will be open with a standard 103.5 pl, but all
control, autopatch & crossbanding will only be accessable thru a non
standard pl below 67.0. If they can hack it then maybe they're worthy
of permission to use. There are so many plug 'n play hams out there that
i think as badly as they would want to get it, I dont think they'd trust
themselves opening their $600 radio to install something they know
nothing about. Besides, were calling it "DPL" anyways. Hopefully
they're as dumb as we think.
And what about 900Mhz? However, that would be pricy. But the
rif-raff up there would be history.. No more resetting.

This is frightening. Five years ago my my Ship Radio License for my sailboat
was free. A recent renewal notice says I owe the FCC $35. And next year
those renewing will pay over $100.

A new VHF marine radio, with all channels, can be bought for as little as
$135 (through West Marine Supply). The license is worth almost as much as
the radio.

>or government agency that operates their own network on similar
>frequencies.

Jim's statement above should bring to an end the `440 in SoCal'
thread. Those are incredibly huge chunks of spectrum that need to be
put to use. When you consider the amount of unused spectrum we have
it really makes the 440 debate moot.

Can't readily *buy* a radio to play with up on those UHF freqs? Put your
amateur skills to use and *build* something for up there. [Roger: I'll
send you my soldering iron if you don't already have one.]

The 3-Hr Ap Indices for 10 JUN 94 are: 8 14 11 46 14 21 13 15
Greater than 2 MeV Electron Fluence for 10 JUN is: 2.5E+08

SYNOPSIS OF ACTIVITY

Solar activity continued at a very low level. Slow decay
was observed in most regions and the east limb is quiet as seen
in Yohkoh soft x-ray imagery. A small region emerged near
N13E04 and was numbered as new Region 7734.

Solar activity forecast: solar activity should continue
at a very low level. An isolated C-class flare is a slight
possibility.

The geomagnetic field was mostly unsettled. The period between approximately 0900-1200Z was at active to minor storm levels with some high latitude sites reporting major storming during that interval. Energetic electron fluxes at geosynchronous altitude were at mostly moderate levels.

Geophysical activity forecast: the geomagnetic field should be unsettled to slightly active. The most disturbed periods should occur near local nighttime. Isolated storm conditions are expected at high latitudes.

Event probabilities 12 jun-14 jun

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 12 jun-14 jun

A. Middle Latitudes
Active 35/30/25
Minor Storm 20/15/10
Major-Severe Storm 10/05/01

B. High Latitudes
Active 40/35/30
Minor Storm 20/20/15
Major-Severe Storm 15/15/05

HF propagation conditions were near-normal over all regions. No significant degradation was reported. The strength of the anticipated coronal-hole disturbance has thus far been weaker than expected. Conditions should remain near-normal over all regions throughout the next 72 hours. Sporadic minor signal degradation can be expected on transauroral night-crossing circuits.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,

Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

I have no problems using the speaker out jack and using a "line level to
recorder level" attenuator to record with my boom box.

To avoid the problems of switching between speaker and recorder, I have
put the two together so I can record and listen on my speaker at the
same time (or record and turn off my speaker with a switch)

>responsive to us, then it's a good thing.

Ha! Fat chance. Remember that these fees go into the Federal general fund, just like any other *TAX*. And remember that the Federal Income Tax was a pittance when it was enacted too, as was the Social Security Tax. If the funds were actually to go directly to the FCC *in addition to their normal appropriation*, then we might see some improved services. But that isn't going to happen. Even if Congress were to earmark the funds for the FCC, unconstitutional, they'd just reduce the general fund appropriation by a like amount (and spend those funds elsewhere) while the FCC would be no better funded than it is now. This is just a *TAX*, nothing more.

>Remember: The amateur service is a big sink to the FCC ... we provide
>nothing of significant value any more, and we're sitting on hundreds
>of megahertz of valuable bandwidth.

We're *not* a big sink to the FCC. They spend on average 8 manhours a week on the amateur service. It's the cheapest to administer service that they regulate. The spectrum we occupy doesn't belong to the FCC, nor does it belong to the Federal Government. It is public spectrum that belongs to the public, not the government. The government's role

is merely to regulate it's use as a resource held in common. In the
case of the amateur service, the active regulation is minimal.

>How many licensed hams are there in the US now? 200,000 maybe? At $7
>per ham per year, we're paying merely $1,400,000 p.a. rent on a LOT of
>real estate...

More like 600,000 (and growing!). If we pass the 1,000,000 mark, we'll
begin to be a political force to be reckoned with, but $7 million a
year would still be chicken feed to a $3 trillion dollar Federal budget.
The Feds spend that much every 48 minutes.

>I'm vaguely upset that for administrative reasons they chose to charge

That's admirable, and a much better use of your money than pouring
it into the bottomless Federal coffers.

Last time i was in france, you'd actually need to apply for a french
amateur radio license to be able to operate there. Their bureaucracy
is absoulutely overwhelming. I've also found European government officials
to be incredibly inflexible and unforgiving. You're worried about confiscation,
I'd be worried about ending up in the slammer--e.g., albeit, Franco was
in power at the time, but when a Spanish bank-teller accidently
converted my travelers checks from Fr. Francs to Pesos at the dollar
rate instead of the Franc rate, I found myself being picked up by
3 plain clothes policemen, two of who were toting submachine guns, in the
next town. It is a different world over their, even in "civilized" Paris.
Take chances at your own risk, they don't invoke canings, and the
guillotine is also not used any more.

: Jeff NH6IL

That's very kind of you Jeff. My address is in the callbook. I won't hold my breath though. I realize that you are just running off at the mouth in your usual discourteous way.

Say, Jeff, if you are such a technical stud and CW whiz, why don't you upgrade to Extra Class? It's nice at the bottom of the fone and CW bands. Nice bunch of ops there. Just had a wonderful rag chew on 14.158 with a nice fellow in Alaska. He'd been a no-code tech right here in Southern California before upgrading to Extra and moving to Anchorage.

Have fun with your soldering iron, old chap.

Yep, that's basically what I do. I just wish they had provided
a line out.

>To avoid the problems of switching between speaker and recorder, I have
>put the two together so I can record and listen on my speaker at the

I find it annoying to use the speaker out line for recording
because I do not like the volume control on the radio to affect the
recorded level. Usually line out levels are fixed to allow recording
to be unaffected by volume control changes.

3834. Beware of RADIOKIT kits (IMHO)

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-12 17:28:46 UTC
From: white@ccsua.ctstateu.edu
Message-ID: <1994Jun12.122846.1@ccsua.ctstateu.edu>
Source record: 265243
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc

I purchased 2 kits from RADIOKIT (New Hampshire) recently (the QRP-20
by K1BQT and the 7MHz Optimized by W7EL).
First, the 7MHz kit was missing SEVEN parts (5 caps, 1 pot, 1 resistor). After
2 attempts to get these components replaced over 2 weeks, I received
ONLY the pot. No explanation as to where the rest of the parts are.
Now for the UGLY one..... the QRP-20 kit is a mess.....missing parts,
wrong-sized standoffs for critical transistor heat sink installation,
directions furnished are for the QRP 15 (!) with several "mod sheets",
undrilled PCB connections, PCB layout errors, gross assumptions in
directions, changes in kit that were not forwarded to customers, etc.
and etc. And gee, all this fun for $100. "Easy to build ....comes with
detailed manual and parts diagram [for a different RIG]..... easy to
wind coils with _full_pictorials_ [NOT] ...." etc. etc.
This is reckless merchandising at best. I'm no rocket scientist,
but this is NOT what it was portrayed to be.

Right on, Jeff! (oops - showing my age again!)

Where better to further the radio art than on an unexplored band and/or mode? Equipment for 5.8, 10 and 24 GHz is readily available on the surplus market. Remember all those microwave towers that Sprint blew up a few years back? The stuff is out there.

What can you practically do up at 24 GHz, you ask? ATV, packet backbone/LAN (full ethernet speed), "secure" repeater control, remote HF station control, etc., come to mind at the moment. You could even bring the entire 1.8-30 MHz "chunk" down to your house and use your HF receiver there to listen to it!

Buying something off the shelf, plugging it in, and being satisfied with simply talking, is ordinary. I'd rather get the enjoyment out of doing something extra-ordinary, and get some satisfaction that I may be doing a little bit to keep the hobby vital.

In article <441@bjohns.win.net> bret@bjohns.win.net (Bret A. Johnson) writes:
>I am looking for opions on the Radio Shack HTX 202 HT.

Pros:

Fairly easy to use.
Good intermod performance, well suited to urban/suburban areas.
Good sensitivity.
Uses easy to obtain accessories (same as a popular older ICOM model)
Inexpensive, RS was selling them for $188, I've seen them for $150
at hamfests recently. May be the best buy in a handheld today.
Durable. Not a fragile unit.
Radio Shack will sell extended warranty, if you wish.
(I prefer to use my Gold Mastercard's extended warranty program, BTW)
Well liked for packet operation in non-fringe areas.

Cons:

RS name is disliked by some (but unit _is_ well constructed)
Does not have advanced features some prefer.
Cannot operate out of band as other units can.
Larger and heavier than many current models by others.
Not a large number of memories.

In summary, a nice basic or entry level hand held 2m unit.
If you want small, highly featured or prestige, look elsewhere.
For basic, durable and straightforward, these are hard to beat.

I'm looking for one of these used for my son to use at Ohio State
this fall, for all the reasons above. I hesitated and missed one
for $150 w/spkrmike at the hamfest today. (Seems as though these
always sell quickly at hamfests, when priced below $188)

>
>We are having some debate in the club about the best base station verticals
>for 2m/440.

We've used several types for the couple local clubs I'm involved with.
What always seems to work best is the Diamond X-500 or X-500RH.
Yes, they wave around a bit in the wind, but they work very well.
(We've tried others, but keep coming back to the Diamond X-500)

Diamonds will not withstand direct lightning strikes. Some commercial
antennas seem to do better with lightning, but offer lesser performance.

Since we can buy a X-500RH (heavy duty version) for around $220, we've
decided to bear with replacing them when they are destroyed by lightning.
Around here, thats about every two years for an tower mounted unit.

Note: for some reason we have not tried the similiar Comet. I hear
other clubs have, and like it. Also, its a good idea to seal up these
fiberglass antennas with silcone seal when you assemble them. Every
once in a while, a leak around a joint will develop, probably from
the flexing in the wind.

3839. Re: "73's"

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-12 21:35:39 UTC
From: jerry@hnrc.tufts.edu
Message-ID: <1994Jun12.163539.2464@hnrc.tufts.edu>
Source record: 265245

By the way,
in addition to the question of whether one uses s or 's to indicate the
plural of a figure, and
in addition to the issue that 73 is a plural to begin with,
there is *another* issue (for me, anyway) that causes 73s (or 73's)
to have the same grating effect on my ears as other forms of
poor grammar: 73 was originally introduced
as a shorthand. Adding an s (with or without the apostrophe)
flies in the face of the economy that prompted its invention in the first
place.

Just my $0.02, but I'll take 73s (or 73's) wherever, whenever, and in whatever
form I find them.

Hey! I managed to use the plural even though it's a plural to begin with!

SB DX @ ALLBBS $OPDX.162
Ohio/Penn DX Bulletin No. 162

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 162
BID: $OPDX.162
June 13, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DF4RD, DL7VEE & DXNL, PA3EZL, SM0CNS, SP6TPM, AD1C, NA2M, KA3DBN, WB4LFM and AA4NC for the following DX information.

A3, TONGA. This will be the last week to work Paul, KK6H/A35RK, because he will be going QTH June 18th. He can usually be found on 20 meters (14175-14226 kHz) SSB between 0330 and 0500z. Also, check the low end (CW band) on 40 meters around 1330z. He also likes RTTY; check around 14086 kHz around the same time as above. QSL via KK6H.

C5, THE GAMBIA. Uli, DK2OC, and Brendan, G0UCT, now active from here signing C56/ their homecall will be going QRT June 17th. They have been active on all bands, but with an emphasis on the WARC bands. The modes being used are CW, SSB and RTTY. QSL C56/DK2OC to DK2OC and C56/G0UCT to G1GMZ.

D2, ANGOLA. The Red Cross will be sending Peter, ON6TT, to D2-land June 16th through July 16th. His callsign is undetermined yet, but he plans lowbands and WARC activity. Due to the circumstance Peter will be using commercial equipment, therefore he will not have the capability to work split. QSL via ON5NT. After Angola, Peter will be active from 7Q-land July 16th to August 1st.

D4, REPUBLIC OF CAPE VERDE. Angelo, D44BC, has been heard on 17 meters and RS-12 this month. Check 18128 kHz around 1130z or on RS-12 check between 29430 and 29445 from 1200 to 1430z.

FT5, KERGUELEN ISLAND. Pierre, FT5XJ, was heard active this past weekend on a DX net on 14226 kHz around 0530z. He will be leaving in July and will return three months later. QSL via F5NLL (F1NLL in the CB).

KG4, GUANTANAMO BAY (Cancelled). The planned operation by Bill, KQ4GC in Guantanamo Bay for June 10-17 has been cancelled.

HB0, LIECHTENSTEIN. Eight members from the Eindhoven Students Radio Amateur Club (ESRAC club calls - PI4TUE and PI5EHV) will be active between 1800z July 6th to 1200z July 11th. Activity will be on all bands (including 6m, 2m and 70cm), CW, SSB, RTTY and Packet. Their main emphasis will be taking part in the IARU HF Championship CW/SSB and the CQ WW WPX VHF/UHF Contests. The group has requested the callsign HB0TUE for the entire operation. If they cannot get the requested callsign, operators will sign HB0/ and their personal callsigns. All QSLs go to PI4TUE.

R1, MALYJ VYSOTSKIJ ISLAND. The "DX-LOGGEN" reports an operation will take place July 30-31st. There is not much information available at this time other than the callsign will be R1MVI.

RA1Z, LUMBOVSKIY ISLAND, RUSSIA. Dick, RW1ZZ, will be active from this Russian Island starting June 15th for about two weeks. He will be active as RW1ZZ/1 on CW/SSB. The IOTA of this one is EU-161 (or for the RRA award, RR-03-01). QSL to RA1ZA.

SP2PIT/1, WOLIN ISLAND, POLAND. Several members of SP-IOTA-Club will be active from EU-132 (SPIA SZ-02), June 25-30th. Activity will be on 80-10 meters, CW, SSB and RTTY. They will also try to activate Usedom Island (IOTA EU-132, SPIA SZ-01) and some other islands for the Polish Islands Award (SPIA) if the weather conditions are good.

TL, CENTRAL AFRICAN REPUBLIC. Gene, TL8NG, has been active on CW the past month on the WARC bands. Check 12, 17 and 30 meters between 1330 to 1600z and again after 0430z. There was also a report that he shows up on the 21335 DX net sometimes (check around 1400z). QSL via WA1ECA.

TY, BENIN. A couple of stations have been active this month from TY-land. A German operator (DJ4IJ) is currently active as TY1IJ until sometime in July. This station will be active mainly on SSB and the WARC bands. Check 14275 kHz around 2200z. QSL via DJ5IO. TY1PS was active over the past weekend in the RTTY contest. QSL via TY1PS via Peter Schulze, B.P. 06-2535, Cotonou, Benin.

VP2E BEACON OFF THE AIR!. Dave, VP2EHF, reports that the Auguilla 6 meter beacon is enroute to the U.S. for repair. However, Dave advises that anyone hearing the Caribbean on 6 meters and needs VP2E to call him or his wife (Dorothea, VP2EE) at 1-809-497-2150 (or FAX: 1809-497-3557). They will be glad to work you.

VP5, TURKS AND CAICOS ISLANDS. Will, AA4NC, will be active as VP5NC in the IARU HF Championship in July on SSB and CW. There will be activity before and after the contest on the WARC bands. QSL via CBA.

XU, KAMPUCHEA. This is a hard one to work for the guys in the mid and east coast states, especially with the poor propagation. Sanyi, HA7VK, continues to be active from here as XU7VK until February 1995. Look for him on 20 meters SSB between 1245 and 1400z.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 12/2330Z JUNE 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 12 JUNE AND FORECAST UP TO 15 JUNE

IPS Warning 16 was issued on 08 June and is current
for interval June 11-13.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 086/029

1B. SOLAR FORECAST
13 June 14 June 15 June
Activity Low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 086/029

1C. SOLAR COMMENT
A solar filament near the centre of the solar disk has dissappeared.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 11 June
Learmonth 21 3344 4433
Fredericksburg 21 15
Planetary 22 16

Observed Kp for 11 June: 3345 3223

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
13 Jun 20 Active.
14 Jun 16 Unsettled.
15 Jun 16 Unsettled to active.

2C. MAGNETIC COMMENT
Active levels expected June 13 due to coronal hole. Active periods
may be observed during June 16-17 due to dissappearing solar
filament.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
12 Jun normal fair fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
13 Jun normal fair poor
14 Jun normal fair poor
15 Jun normal fair poor
3C. GLOBAL HF PROPAGATION COMMENT
Degraded HF comms conditions expected today for mid and high lats.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were about 15% above predicted monthly values

Observed T index for 12 June: 53

Predicted Monthly T Index for June is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
13 Jun 40 About 10% above predicted monthly values.
14 Jun 40 About 10% above predicted monthly values.
15 Jun 40 About 10% above predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Degraded HF comms possible today.

That is unfortunate. Radiokit has been around for quite a few years;
surely they wouldn't have lasted that long if that kind of performance
were the norm.

SB SAT @ AMSAT $ANS-162.01
DOVE VOICE TESTING STATUS

HR AMSAT NEWS SERVICE BULLETIN 162.01 FROM AMSAT HQ
SILVER SPRING, MD JUNE 11, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-162.01

DOVE-OSCAR-17 (DOVE) Voice Synthesizer Testing Continues

At about 11-JUNE-94 05:30 UTC the DOVE Ground Command Team completed a reload of the DOVE software and activated another voice test. The pronunciation of the word "Hi" is a bit different and the overall amplitude of the voice is higher. The text message is a greeting to those attending the ARRL Convention and Education Forum.

The DOVE Ground Command Team expects to continue the hardware testing process while simultaneously proceeding with software development. It is expected that this effort will probably last several days to a few weeks before all the testing and software developement is completed. There may be times when the voice message will not be heard due to uploading of new software.

It would be appreciate if reports on how well the voice can be heard with simple receiving equipment (a H/T with a rubber duck antenna) could be sent to any of the following individuals who have mail address on INTERNET:

WJ9F@amsat.org
PY2BJO@amsat.org
WD0E@amsat.org
VK7ZBX@amsat.org
N5AHD@amsat.org

Telemetry is not needed at this time.

[The AMSAT News Service would like to thank Jim White (WD0E) for this bulletin item.]

Hi Brian. By now you've taken that test. How did you do?

These coordinating bodies form. Their power basically is in acceptance
by the amateur community. The FCC's only sanction of them are some warm
words in Part 97. How disputes are resolved, and the rules about how
stations are coordinated, are up to these bodies.

In practice, it's a tough thankless job.

Karl,

The Subject: line of this message is still 440 in Southern California.
This is not Texas or Ohio.

If Roger wanted to put up a 440 repeater in Southern California, all indications are this widely popular service would be co-channeled with other open repeaters on about a half-dozen frequencies. I don't have my repeater guide with me, but I think six is pretty close to the actual number of pairs -- out of all the 440 band -- where open repeaters are coordinated.

Every other pair has a single or multiple closed-channel repeaters on them -- if the repeaters exist at all (and many don't).

Now the "Scrubba" dudes can't be all bad -- this took some thought to accomplish. I don't think when this bandplan was formulated that they figured that in the 1990's, 440 was going to be a popular band.

Times changed. The method has become their madness. We need to triple the available "open" pairs and create a few for extremely high-level wide-area signalling, a few for regional use, and a few for community use on a shared CTCSS-controlled inputs. And that would leave plenty of room for the private repeaters.

Coordination has to be more assertive. First come, first served may work great at the bakery. But in a city with borders, planning and negotiating go hand-in-hand. So XYZARC can't put their private repeater on Mount Horizon at 500 watts Omni, they'll have to decide between Lookout Hill at 50 watts or Polaroid Point at 100 watts with a Southern directional. Sorry fellas. What's that? You want Lookout Hill at 150 watts Omni? Well lets make it 100 watts and you can increase to 150 watts during your weekly net and during emergencies. Fair enough? Deal!

See? Easy!

Michael,

I too have been offended by some of the finger-pointing going on. The idea that all repeaters must be open repeaters is not communistic -- in that all of the spectrum is public property and this condition is a not totally unreasonable condition in exchange for permission to reserve a part of it for someone's repeater.

However, it isn't necessary to go that far. I would be happy for a "Scrubba" policy that would increase the availability of open repeaters in the future. I'd be really happy if they figured out a way to do that in some way other than attrition.

Roger is an extra class ham who has earned his wings. But more than that, he's human being and an American who is simply fed up about an unfortunate condition. He doesn't deserve to be called names for anything he has said here.

My HTX-202 warms up a bit too on low power. I don't have the heat sink (belt clip) installed... it mungs up my belt.

I have had some trouble with recieve PL... I set my HT to use PL squelch (open up when PL is recieved)... and even though the local repeaters transmit their own PL, my HT sometimes kicks in and out. Anyone else have that problem? Is this normal, or a defective unit, or an adjustment that can be made?

Jose

I guess all I can suggest is get the extended warranty. In the last 5
months I killed two of them. One just decided to start flashing error
codes at me one day when I turned it on. The other was exposed to a VERY
minor amount of moisture, it was drizzling, and it quit totally.
My recommendation it to buy "Name Brand". The base models of ICOM,
Kenwood, and Yaesu are not that much more expensive.

This "Scrubba Policy" has been subverted by all the clever groups who operate "closed" repeaters. Closed not Private. Check it out ... most of the new closed repeaters are really open systems for any ones enjoyment. The amateur community will quietly re-write the policy through this vary action. What does this word closed mean when you can have an open 2meter repeater be re-coordinated as closed, to try to maintain some semblence of order. That group says the repeater is really open. Being closed really is a far cry from having a Private repeater with no activity taking up spectrum in southern california.

I have been run off several private socal repeaters when I have been travelling in the area, but I have been welcomed on most. So what! The good 440 amateurs in socal still far outnumber the jerks on 440.

Bob from the Bay Area no where near socal ;)

What has English got to do with 73? It is not an English word, it is a radio code. It means things like "Best Wishes" and the equivalent in other languages, "Bon Chance" or whatever. It is already plural, so 73's is like saying "Best Wishes's".

You might use 73's only if you are speaking to more than one person, i.e. Broadcasting but who would say "Best Wishes's to everyone" and consider it good grammar?

Mike

3860. Nickel Hydride Cells

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-13 08:36:36 UTC
From: M.Willis@ee.surrey.ac.uk
Message-ID: <1994Jun13.083636.5538@ee.surrey.ac.uk>
Source record: 265270

I have just bought 6 Nickel Hydryde AA cells for use with my Icom handheld. I wonder if anyone has any experience with such cells they are able to share? The cells are matked as 1.2V 1200mA hours. They weigh about the same as Nicads but claim to be "Green". I gather they must not be fast charged. This is not a problem as I do not have a fast charger. However the standard ICOM rate is 70mA and they need 120mA. Rather than wait longer than necessary, I suppose I should fast charge them, but at what rate? Would 240mA for 7 hours be OK? How about 360mA for 5 hours?

I hope they will last longer than Nicads, they ought to with 1.2 AH Vs 0.7 AH but one never knows how the capacity relates to discharge characteristics. A handheld takes about 2A for TX and only 40mA on standby, quite a difference.

Any help is appreciated.

Mike

I have noticed this with the HTX-404 that I own also. I believe it is either multipath, poor signal strength causing the PL to not be "heard" by the HTX-404, or a mix of inbound and outbound PL at the repeater site that nulls or drastically reduced the level of the outbound PL.

If you hear of any way to make these radios less PL sensitive, let me know. It's a little annoying, but not unworkable. (i.e. I'm not using mine to get rid of any other interferance, just to listen for certain PL's from the repeater that are for emergencies, etc... so if I hear ANYTHING from the radio, I can just turn the receive PL off and listen without interruption.)

Radio Shack will sell extended warranty, if you wish.
(I prefer to use my Gold Mastercard's extended warranty program, BTW)
<more stuff deleted>

The terms of the Gold Mastercard warrenty extension limit coverage to defects in materials and workmanship. If you drop it and crack the case open you're out of luck. The Tandy service plan, however, is not limited to defects in materials and workmanship. For ~$40 you get five years coverage. I wish I had one when I dropped my two week old $500 icom W2A 3 feet and broke the battery off. Icom's response was that the damage was caused by abuse and not covered by the warranty. Their solution was for me to buy a new battery ("$65 please").

(In all fairness, after some amount of arm twisting, letter writing and waiting, icom replaced the battery "just this once".)

larrygood@delphi.com wrote:

: Is there an extended recieve code anywhere out there for this radio?

NO! Whatever else you may read, there is NOT a way to modify the HTX-202
or HTX-404 to go out of band. Tandy has put out a bulletin about
numerous HTX series radios coming into their factory that have been
damaged beyond repair by someone trying to follow the instructions of a
"out-of-band mod" sheet for the HTX radios. (202 expecially)

There is, however, a code to open up the HTX-404 to cover the entire 440
mhz ham band, and that can be found in the HTX-404 manual. I assume this
is for folks experimenting with Amateur satellites and the like, I've never
needed to do it to use local repeaters or 446.000 simplex.

Hope this helps.

According to Radio Shack, there is *no* way to give this radio extended receive. It was contradictory to the goal of making it extremely intermod-resistant (and according to both QST and 73 it's the best unit on the market as far as resisting intermod). As RadShack's product manager said in an article he wrote about it, "An HT with extended receive can't do anything that a scanner can do better, so if you want a scanner, go out and buy one." Or something like that.

From: bobw@col.hp.com
Message-ID: <2thudq$3n0@hp-col.col.hp.com>
Source record: 265133

COLORADO 14ER RADIO EVENT ANNOUNCEMENT

The 1994 Colorado 14er Radio Event will be held Sunday, August 28th. During the event, a group of amateur radio operators will operate portable from the summits of various Colorado 14000 foot mountains. The operating times will be generally from 9 AM to 12 Noon local time. During last year's 14er Event, over 20 summits were on the air and between 150 and 200 different stations were heard that day.

Radio amateurs are encouraged to work as many of the mountaintop stations as possible. However, this is NOT A CONTEST, no points are awarded, no scores recorded. A special event QSL card can be obtained by QSLing to the mountaintop station's home QTH (please include a Self-Addressed Stamped Envelope). To reduce QRM, PLEASE DO NOT USE HIGH POWER (more than 30 Watts) and DO NOT CALL FOR 14er STATIONS UNLESS YOU HEAR THEM.

Radio operators with high altitude hiking experience who wish to participate should contact Bob, KB0CY at (719) 488-0859 or 18070 Sunburst Drive, Monument CO 80132. To avoid having multiple stations on the same peak, radio amateurs that want to participate must coordinate with KB0CY.

Frequencies used during the event:

146.43 MHz Longs Peak
146.46 San Juan Range (Handies, Redcloud, ...)
146.49 Bierstadt, Grays and Torreys
146.55 Coordinating Frequency
(Net Control, Pikes Peak)
146.58 Mt. Evans
147.42 Sangre de Cristo Range (Humboldt, ...)
147.45 Misquito Range (Quandary, Lincoln, ...)
147.48 Elk Range and Sawatch Range
147.51 Pikes Peak (QSOs)
147.54 Reserved for Mountaintop Stations Only

223.5 Primary 222 MHz frequency

446.000 Primary 70 cm frequency
446.025 Alternate 70 cm frequency
446.050 Alternate 70 cm frequency

Other bands/modes: standard calling frequencies

If you don't have the belt clip installed, I guess you don't hang it on
your belt anymore. Why not install the clip/heat sink and still just not
hang it on your belt?

->
-> I have had some trouble with recieve PL... I set my HT to use PL
-> squelch (open up when PL is recieved)... and even though the local
-> repeaters transmit their own PL, my HT sometimes kicks in and out.
-> Anyone else have that problem? Is this normal, or a defective unit,
-> or an adjustment that can be made?
->
-> Jose
->

Are you sure it is the PL that is the problem? Do you have the "power save"
option turned on? If so, turn it off, and your problem will probably go
away. This is a common problem with the HTX-202 power saver. With the power
save turned on, it is like a hybernating bear - it will sleep through almost
anything :-)

Remember that fees collected by the FCC go into the "Great Big Government Kitty", not into FCC coffers. Our paying an extra tax (which is the effect of a fee) doesn't help the FCC, so it doesn't make them more responsive to us. It just costs us money. I'm glad you want to help out the US Government in its financial plight brought about by years of irresponsibility, but I'd prefer you did it by contributing your _own_ money rather than that of all the hams!

I hope you folks will soon resolve the problem of how to pronounce, spell, and punctuate that "best regards" problem, so that we all are using the term correctly to your satisfaction. The bandwidth is suffering.

When you finish with that, could you please correct everyone in the southern US, so that they pronounce the word "YOU" without "all" attached at the end? That is equally important for y'all to address, and can be solved at least as easily as the above.

Sorry, but I calls 'em as I sees 'em. You want to force repeater owners to allow anyone and everyone to use their repeaters, contributing or not, good operator or not, harmoniously with the trustee and existing users or not. You want to let anyone use a repeater even if they won't lift a finger to do anything but push the PTT. Just because someone can put up a repeater, you think it should be a public utility. "From each according to his ability, to each according to his needs"...words straight out of the Communist Manifesto. Repeater users of the world, unite! You have nothing to lose but your chains! Right. You, sir, are a repeater communist, and I do not say that carelessly, but with a great deal of deliberation.

>Now, Jay, this just shows that you haven't bothered reading much of this
>thread. You haven't done your homework. Firstly, if you'd get off of your
>high-horse and stop using phrases like "he and his buddies could get a

>have published on this thread earlier, I belong to three clubs, I pay over
>$200 per year to contribute to the upkeep of various repeaters. OPEN
>Repeaters. How you doing, chum?

I've been involved in ham radio, including several repeater groups, for over 20 years. I've put more into repeaters and repeater clubs and frequency coordination than you've put into radios. I've served the hams of Texas in various capacities for almost 10 years...how long have you been in ham radio?

If you want to put up and support open repeaters, great. I've been there before. I think there's a need for open repeaters...but where we differ is that I think there's a place for closed machines, too.

The only folks who want to outlaw closed repeaters - for that's essentially what you're calling for - are those who want someone else to make their radios useful. If you think that that places me on a high horse, all I can say is come up here and enjoy the view.

>Please answer concisely. These 5 or 6 page answers you've been posting
>have given my "kill" function enhanced utility.

You are, of course, entitled to read what you'd like. This issue, however, is not one that lennds itself to concise answers; it's a knotty, complex,

political one that's been going on for longer than you've even known about ham radio. I've been writing as concisely as I can while still addressing the issues. It's just not as black-and-white as you'd like to believe.

3880. Morse Code trainers

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-13 17:39:00 UTC
From: lieser@iccgcc.cs.hh.ab.com
Message-ID: <1994Jun13.123900.1@iccgcc.cs.hh.ab.com>
Source record: 265136

I recently purchased the Pocket Morse Code Trainer from Computer Aided Technology, Inc. in Dallas, Texas (advertised in May '94 CQ) for $29 plus shipping. Here's a short and incomplete review, and then a mention of yet another pocket trainer that I've run across since:

On the front panel are two pushbuttons, an on-off switch, and an earphone plug. The box itself is a plastic Rat Shack 270-293 Transmitter Case (a little bit bigger than a deck of cards and about twice as thick, but it fits nicely in a shirt pocket.) A volume control is recessed in the top (or bottom, if you prefer) of the unit, and is adjustable with a small flat-head screwdriver. Good idea, since it's not a knob on the unit which could accidentally turn on *FULL BLAST!* I use it with in-the-ear Sony headphones, and was able to turn the volume to its lowest point and hear the beeps very comfortably. Probably extends the life of the 9-volt battery somewhat, too.

It uses 3 modes: 1) simple random mode, 2) interactive mode, and 3) a preprogrammed set of random codes. The modes are selected by which of the buttons on the front panel are pressed when powering the unit on. Pressing no buttons puts it into Mode 1. You then push button 1 a number of times which determines the code rate -- 0 times for 3 wpm, 1 time for 5 wpm, etc. up to 23 wpm. Press button 2 to indicate selection complete, then press button 1 again to select the character group. Not pressing it at all means use all codes, and pressing it anywhere up to 7 times changes the character set used (All Codes; A-Z,0-9; A-Z; A-I; J-Q; R-Z; 0-9; Punctuation and other). Pressing button 2 again to indicate selection complete and it begins transmitting.

Mode 2 is selected by pressing and holding button 2 while turning on the power. This mode requires you to press button 2 after each character to allow you decide when you're ready for the next. Pressing button 1 after a character replays the same character again.

Mode 3 is selected by pressing and holding button 1 while turning on the power. In this case, you again select the code speed and then select a pre-programmed test of around 80 characters. There are 6 tests to choose from, and they are printed on the last sheet of the instructions. I would think that one would use this only occasionally, so that you don't memorize the character strings.

Lastly, holding both buttons down while powering on will put the unit into Mode 1, but will send the characters at 18 wpm with appropriate spacing (Farnsworth method.) This is what I've been using at 5 wpm (I may as well mention that the rates are 3-5-7-9-11-13-15-17-19-21-23). The documentation lists the top speed at 23 wpm, but the salesman on the phone had told me that it will now go to 31 wpm. I tried this and it seems to be correct.

I originally (recently) learned the code with the ARRL Introduction tapes, and the sound quality, tone, and pitch sound pretty much like those tapes. I'm fairly impressed, and I think I'll get a good bit of use out of it as I attempt to ramp up the the 13 wpm level. Oh, the one I purchased is a stereo unit -- mono is available also.

Compare this to the new MFJ Personal Morse Code Tutor at $79.95. This is also a pocket-sized unit, but your pockets need to be a little bigger -- 3x1-1/8x5-1/2 inches. This unit's speed is selectable from 5 to 60 wpm, and the tone is adjustable from 300 to 3300 Hz. It's a metal box with a built-in speaker (or use headphones) and takes a 9-volt battery also. Farnsworth is supported, as well as "realistic" QSOs and complete words to allow you to learn to recognize entire words instead of just individual letters. I messed with one of these at the local Amateur Electronic Supply a bit -- seemed like a nice little unit, too.

Well...maybe the CB service is cheaper to regulate...or *not* regulate,
but one could argue the FCC spends less time on it than on the amateur
service....when was the last time you saw an NPRM for the CB service?

I recently acquired a Kenwood TS-50 for mobile HF and installed it in my
1992 Ford Explorer. With the key in the Accessory position (all electronics
fired up but engine not running), the noise on HF is S9 or better across
all bands, but most accute on 17 and 20m. Anyone out there in netland
solved this problem already???

>it really makes the 440 debate moot.

Not exactly. The microwave bands may be useful for point-point
linking, etc., but aren't commonly used, even by the business or
government agencies, for mobile communications as we know it.

>Can't readily *buy* a radio to play with up on those UHF freqs? Put your
>amateur skills to use and *build* something for up there. [Roger: I'll
>send you my soldering iron if you don't already have one.]

Procuring parts and building working gear for microwave bands is
considerably more difficult than building 80m transmitters out
of junk televisions. I agree amateurs should indeed get involved
on these bands, but these bands are not necessarily valid replacement
spectrum for the functions filled by 2m, 70cm, 33cm and 23cm.

SB NEWS @ AMSAT $SPC0613
* SpaceNews 13-Jun-94 *

BID: $SPC0613

=========
SpaceNews
=========

MONDAY JUNE 13, 1994

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited distribution.

* DOVE STATUS *
===============
Jim White, WD0E, reports that DOVE's voice synthesizer is undergoing tests. The satellite is now speaking the phrase "HI, this is DOVE in space" for one minute of every four minutes. "HI" has been traditionally sent from Amateur satellites since OSCAR 1, so it seemed appropriate for this re-activation of the voice synthesizer in DO-17. The team will continue to work on improvements, including possibly raising the amplitude of the voice, which is presently about half that of the telemetry.

Software was completely reloaded last week. The S-band beacon has been turned off. Transmitter power will be optimized while maintaining a positive power budget. Reception reports are welcome (to PY2BJO). Telemetry is not needed.

Jim White
WD0E for the team: WJ9F, VK7ZBX, N5AHD, NK6K
With support from WB6LLO and K0RZ

* LUSAT STATUS *
================
LUSAT-OSCAR-19 is still not available for general use, and the BBS is not expected to be operational for the next few weeks. Raw telemetry should be sent by packet radio to LU8DYF@LU8DYF.BA.ARG.SOAM or LU8DYF@ANY-ACTIVE-SATELLITE, or via the Internet to: lu8dyf@asarin.org.ar. Certificates are available for those who forward telemetry reports.

The LUSAT-1 recovery team wants to thank all stations who sent LUSAT-1 telemetry data in RAW format, including:

JN2LHU, OZ6BL, OZ7SAT, EA1BCU, EA2CLS, WH6I, W9ODI, SM5BVF, ZS6BMN, JJ1WTK, LU1FYZ, LU2FCY, LU2JCI, LU1JBR, LU8ENU, LU6DYD and LU1DBC.

[Info via Eduardo Sweet, LU7AKC (LUSAT-1 recovery team)]

* ITAMSAT (IO-26) BACK ON *
==========

After a couple of weeks of stand-by mode, ITAMSAT under ground command was switched back ON. A new MBL code was successfully loaded to test the modified s/c configuration (secondary TX on). Telemetry shows all the vital parameters in nominal status. Further tests will be carried out in the next few days. Also due to the very limited time budget of the command stations, please expect a few weeks before normal operations.

[Info via Alberto, I2KBD, of the ITAMSAT Command Team]

* APT STATUS *
==========

Observed at 50.7 NLat, 7.1 ELon (Germany) on 28-May-94:

NOAA-9: APT 137.62 MHz On
NOAA-10: APT 137.50 MHz *OFF*
NOAA-11: APT 137.62 MHz On
NOAA-12: APT 137.50 MHz On
Meteor 2-21: APT 137.85 MHz On
Meteor 3-5: APT 137.85 MHz *OFF*

The VHF-conflict between NOAA-10 and NOAA-12 continues with NOAA-10's APT turned off. Meteor 3-5 APT is off too. The APT-frequency of Meteor 2-21 changed from 137.40 MHz to 137.85 MHz, but the signal is weak as always. As Meteor 3-5 is off, old NOAA-9 now is the best source for good vis-images.

[Info via Peter Henne]

* FO-20 NEWS *
==========

On 19-May-94, the FO-20 command station announced that a problem exists in FO-20's onboard computer system. The satellite's transponder will remain in the analog mode (JA) until further notice.

[Info via Kazu Sakamoto, JJ1WTK]

* DISTRIBUTION INFORMATION *
==========

Recent FCC rule changes have made both the originator of packet radio bulletins as well as the control operator of the originating BBS legally responsible for the content of packet radio bulletins. As a result, many bulletins entering the Amateur Packet Radio Network (AMPR) must be held for review by the BBS sysop before forwarding can begin. The adoption of this new procedure will lead to delays in the distribution of SpaceNews and other bulletins within the Amateur Packet Radio Network.

In addition, recent routing changes have lead to local Internet mail problems. This is expected to produce distribution delays within the packet network since the Internet is used as a SpaceNews distribution backbone.

* THANKS! *

3885. "73's"

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-13 18:26:07 UTC
From: Cecil_A_Moore@ccm.CH.INTel.COM
Message-ID: <940613102607_101@ccm.hf.intel.com>
Source record: 265143

Text item: Text_1

>What has English got to do with 73? It is not an English word, it
>is a radio code. It is already plural... Mike

Hey Mike, you need to get out of the shack more often. Before there was such a thing as ham radio, 73 was (and is) an English figure and should follow the rules of the English language, e.g. I can't believe the number of 73's that I have seen lately on info-hams. Try composing the preceeding sentence without pluralizing 73. :-)

Message-ID: <bgloverCrCnHv.30L@netcom.com>
Source record: 265148

Am looking for information from users of the TS50. I am thinking of getting a mobile rig and would like to know what users think of this rig. I checked one out in a store and was favorably impressed. Not really a full featured unit, bit seemed good for the impressive size.

Anyone have any mobile use experience and would care to comment?

3887. Poor Man's UHF Transmitter Combiner?

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-13 19:02:19 UTC
From: jra@lawdept.daytonOH.ncr.com
Message-ID: <jra.180.000E0A4D@lawdept.daytonOH.ncr.com>
Source record: 265194
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I'm looking for a cheap way to combine two UHF repeaters onto a single duplexer and antenna system. We can't afford to buy a hybrid combiner/isolator system, so this is going to be homebrew city.

Assuming that we can put the new repeater on a channel close enough to be within the duplexer's passband, we need to come up with a way to inexpensively combine two 35 watt UHF transmitters.

I think we can come up with several isolators, since UHF Micors have ferrite isolators in the T/R switch and there are lots of dead ones floating around. Our current thinking is along the lines of using two isolators in series on each transmitter, which should give, what, 40 or 50 dB of isolation? And the Micor isolators have a 50 watt or so dummy load on the reverse port, so I hope they can handle the power.

Then, a Wilkinson combiner made out of quarter wave sections and a 100 ohm noninductive resistor would provide some additional isolation and provide an impedance match into the duplexer.

The transmitters will be 35 watt Mitreks, and we can afford to lose 3dB in the resistors if we have to. The important things are a) not to fry the transmitters, and b) not to generate intermod.

Does this seem like a sensible approach? Is there any other way to do this? Our budget could handle a couple of hundred bucks, but unless we can find a very cheap used combiner, it doesn't look like the commercial solutions are possible for us.

Thanks for any thoughts on this...

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I am getting a Chevrolet Lumina (1993) and intend to install my dual-band mobile rig. This car has alot of computer controlled systems and I don't want to interfere with them. Also, although I haven't really spent a whole lot of time looking, I don't seem to be able to find anyway of running the power cables through the firewall. Will I have to drill a hole and put in my own grommet?

I plan to put the antenna on the trunk. Any suggestions on the best path to run the feedline through?

I am hoping that I may be able to benefit from the experiences of other Lumina owners. Any information regarding this installation in this vehicle will be greatly appreciated. Please e-mail responses to save bandwidth on the net.

Thanks
Mark

I have been trying to give this away for some time now. Perhaps
someone will take it off my hands this time.

I have the following INSTRUCTION/OPERATORS MANUAL up for grabs:

HY-GAIN THUNDERBIRD (TH3Mk30 THREE ELEMENT HAM ANTENNA.

This INSTRUCTION/OPERATORS MANUAL is in good condition.

The intent is to give this INSTRUCTION/OPERATOR MANUAL to an
individual or entity who ACTUALLY has the equipment.

The first person to send me e-mail and follow up with a large manila
SASE with postage for 3 ounces gets the prise.

If you are the lucky one, you will be asked to send a SASE (large
manila or other envelope) with the appropriate amount of U.S. postage
to me c/o the address in my .sig file.

Also, as a courtesy, a photocopy of the manual will be sent to anyone
else who sends me a SASE.

Good luck to one and all.

73,

~jack_

Source record: 264653

[[EXAMNT6.14 : 4163 in EXAMNT6.14]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and
10 weeks after the test session. The FCC considers their
processing time to be 90 days--from the date they receive the
application. The FCC usually receives the application one
to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will not receive a new license from the FCC.
The existing Technician license plus the CSCE conveying the Morse
code test credit is the only documentation issued for use of
the additional HF privileges.

****

The following test session information is provided by the
ARRL/VEC for the upcoming six to eight week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact
the ARRL Educational Activities Department (EAD) at 203-666-
1541 x219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541

>sentence without pluralizing 73. :-)

I don't believe it, but there have been many more than one 73 on the
net lately. Try's composing's the's preceeding's [sic's] sentences
without's pluralizing's seventy's threeses's.

0) I have "edited" you original article to rearrange lines > 75 chars.

1) Sounds like you have the Gold Peak GP120AAH cells.
You can fast charge them -- in fact, they are designed to be fast
charged, but charge control is critical if you decide to fast charge them.

2) Charging them at 70 mA is OK; it will just take a long time. The cells
will take 100 hours of overcharge at 120 mA, so 70 mA is a very safe rate.

3) Anything greater than 360 mA is considered fast charge, which requires
some method of detecting fully charged cells. At 240 mA, it is probably
safe to just charge them for 7 hours, the overcharge not being that severe.
At 360 mA, I wouldn't leave them for 5 hours unattended, as if the cells
are not that discharged, you will have quite a lot of overcharge. You
should monitor cell temperature or use the delta V technique, though it
is much more difficult to do with NiMH cells than NiCd. Only at 1.2A
charge do you see any sort of voltage drop -- you need to look for
zero derivative of terminal voltage to do things right.

4) NiMH cells can withstand 3C discharge rates or 3.6 A. However, the
cell temperature can rise and the heat can damage the batteries. But
in an HT application, I don't think it is a problem.

5) NiMH cells have a very poor shelf life, especially at higher than
room temperature. In 2 weeks at 40C, they are totally discharged.

Good luck.

-Ken

Why not? I know some work in that area has been done by the North Texas
Microwave Society...

>Procuring parts and building working gear for microwave bands is
>considerably more difficult than building 80m transmitters out
>of junk televisions.

Building 80m transmitters was, once upon a time, difficult and expensive, too.
Hams changed that.

> I agree amateurs should indeed get involved
>on these bands, but these bands are not necessarily valid replacement
>spectrum for the functions filled by 2m, 70cm, 33cm and 23cm.

Why not? Those who claim that the purpose of ham radio is solely or primarily
technological advancement have a golden opportunity to prove that hams can
still contribute.

Hey, keep your ideology straight. Us liberal weenies are "tax and spend" guys, remember? We'll be in favor of it because it means more money in the hands of the benevolent government and less money in the hands of dangerous gun and radio nuts, who would probably just spend it on remote control assault weapons.

>What's PRB-1?

Pick up this months CQ magazine (June) for a good explanation of PRB-1 and
its effects on antenna legality.

Overall, PRB-1 was a letter from the FCC that explained their policy
that local communities really "should" help hams by "reasonably"
accomodating towers and stuff. It had no teeth, and not surprisingly,
has not fared well under the Federal Courts where it has been tested.

I guess that makes 5.8GHz mobile a viable replacement for 70cm.

>>Procuring parts and building working gear for microwave bands is
>>considerably more difficult than building 80m transmitters out
>>of junk televisions.
>
>Building 80m transmitters was, once upon a time, difficult and expensive, too.
>Hams changed that.

Agreed. I guess this makes 5.8GHz mobile a viable replacement for 70cm.

>> I agree amateurs should indeed get involved
>>on these bands, but these bands are not necessarily valid replacement
>>spectrum for the functions filled by 2m, 70cm, 33cm and 23cm.
>
>Why not? Those who claim that the purpose of ham radio is solely or primarily
>technological advancement have a golden opportunity to prove that hams can
>still contribute.

Well, either Jay just wants to carry in "splut-like" fashion :-), or he
didn't read what I wrote.

I said "The microwave bands are not necessarily valid replacement spectrum
for functions filled by 2m, 70cm, 33cm and 23cm". Jay counters with a little
bit of Mom and Apple Pie. Let's be serious; the microwave bands are not yet
valid replacement spectrum for the popular 2m and 70cm bands. Offering them
as such ignores reality. Let's have a constructive discussion rather than
Mom and Apple Pie, OK?

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I had the "beyonds MARS" (remove D3 and cut W1) done to my TH-78A and everything works pretty well except for a few peculiarities... When I set both sides (VFOs) to VHF the right one acts strangely. The rx is far more sensitive then the left side because the squelch will open often times on the right side and the meter will go up while I'm not receiving anything on the left side. But... even though the right side has better rx I cannot hear any of it because it comes out as barely understandable static. (When I am close enough I can get perfect rx on the left side.)

There is no difference around the 440MHz band. I haven't been able to check whther these "peculiarities" also occur around the 2m ham bands since I'm not close to any repeaters right now -- but it definitely holds true for the aircraft and commercial bands.

One other small thing. About half the time, the tx doesn't always open up immediately on the commercial band. The red light will flash on and the meter will jump up but then drop down after a split second. After fiddling (switching channels or turning the radio on-off) then it will tx properly. Never any problems tx on the ham bands.

Anybody else noticed the same peculiarities or have any advice for me?

Thanks very much,

Marc Wollemborg

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 13/2330Z JUNE 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 13 JUNE AND FORECAST UP TO 16 JUNE

No warning is current.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 085/027

1B. SOLAR FORECAST
14 June 15 June 16 June
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 085/027

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 12 June
Learmonth -- 3333 23--
Fredericksburg 12 26
Planetary 12 21

Observed Kp for 12 June: 3445 3443

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
14 Jun 12 Quiet to unsettled.
15 Jun 12 Unsettled.
16 Jun 16 Unsettled to active.

2C. MAGNETIC COMMENT
Active periods may be observed during June 16-17 due to
dissappearing solar filament.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
13 Jun normal normal-fair fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND

None of this has much to do with ham radio; it's more a matter of
money and control. The Peoples Republic of Kanada wants to increase
taxes on its already overburdened citizens just as much as Slick Willie
Klinton and Company. Taxes and fees on boating are there to keep
the cost of leisure time high. You can't have people enjoying
themselves, now can you?

Ham radio is another good thing to tax. Again it's a leisure time
activity. And worse, it gives people a means to communicate outside
the approved media.

>On the other hand, once you have a qualification you have it for life,

Hi
I am looking for some info on what software and hardware do I need to
be able do download weather maps that show ocean water temps off the eastern
coast of NJ. I have heard of SW that goes to a com port but have also heard
recently that you can also imput through a SB16 card, and this actually gives
a better image.
please I'm new to this and would appreciate any and all help.

I currently have have a 486 DX2 -66 with a 500meg drive, 14.4 fax modem,
ink jet printer,SB16, double speed CDROM, SVGA monitor if that helps.

Thanks
Ron

: Not exactly. The microwave bands may be useful for point-point
: linking, etc., but aren't commonly used, even by the business or
: government agencies, for mobile communications as we know it.

How about the entire GPS system? How about the INMARSAT system? How about all the satellite links on shipboard? How about all that military stuff they don't want you to know about?

Some enterprising amateurs have indeed operated mobile above 1300MHz. I personally operated mobile-in-motion full-color ATV on 5.8 GHz. Remember, it wasn't too long ago that the common belief was that mobile operation above 500 MHz wasn't feasible. If that barrier hadn't been broken, there would be no cellular service! As an alternative (and less innovative), one could always take the point-to-point stuff out of the current mobile-friendly bands. This would make more room for the current mobile technology and put point-to-point stuff on frequencies which are more suited to it.

: I agree amateurs should indeed get involved
: on these bands, but these bands are not necessarily valid replacement
: spectrum for the functions filled by 2m, 70cm, 33cm and 23cm.

You mean the _mobile_ functions, I hope. There are many functions that are perfectly suited for microwave. Two that come to mind are all packet backbones and links between repeaters. Large chunks of 2m and 70cm are tied up with this non-mobile activity. Just think if all BBS forwarding was done on other bands. The end users would have more access to their BBS because forwarding could be done "in the background". If all links were out of 420-440, and we could use it for non-auxiliary stuff, another 80 FM channels would be available for the traditional mobile user.

My point was that 80m was, at one time, not valid replacement spectrum for
stuff below 200 meters, too. We've been handed lemons in the past and made
lemonade out of them. What would you have said back when hams were given 200
meters and down because nobody else wanted it?

The microwave bands - or even 2400 MHz - are not "valid replacement spectrum"
only because hams would rather bitch than switch, as Jim Reese puts it. To
complain that you can't put up yet another yak box on 440, and so it's time to
change the rules in midstream and destroy someone's thousands of dollars worth
of repeater investment, is to capitulate rather than pioneer. Call it Mom and
Apple Pie if you want to...but who's arguing about ham radio as a technical
service now?

Sure, some folks have operated mobile above 1300 MHz. I think it would be the
cat's meow if amateurs could actually go develop some new mobile services that
work well in the upper microwave bands.

I'm in complete agreement that point-point linking ought to move up to the
more suitable frequencies.

Uh, yeah. Read my first paragraph again. My emphasis was indeed on
mobile activity. Wasn't that clear?

3914. ATV transmitts on every UHF channel - why ?

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-14 04:36:47 UTC
From: mike@io.org
Message-ID: <2tjc50$7dj@ionews.io.org>
Source record: 265171
Cross-posted to: rec.radio.amateur.misc,sci.electronics

I recently breadboarded a simple (no crystal) ATV transmitter, and being a novice experimenter, was amazed to see it actually transmitting my VCR / Camcorder signals to my portable tv !

The transmitter works with either an air coil of about .5" or .125" diameter (both 3 or 4 turns #22). It's a Colpitts oscillator.

I *thought* that the large coil would be have a resonant frequency of about 100 Mhz, and the smaller one would be about 470 Mhz.

I am wondering why my portable tv is receiving the transmitter on every UHF channel.

Would the transmitter be generating strong enough harmonics that the signal is being sent on every UHF channel ?

Mike

>I'm still waiting. Been 25 weeks so far; resubmitted my application
>after 15 weeks, still no response on that either. Took my test 12/18/93,
>W5YI was VEC, checked with them, sure 'nuf they submitted to the FCC
>12/27/93. FCC still shows "no record of application" when I call.
>Gonna resubmit again soon, I guess.

I think this is where it gets to be the appropriate time to write your congresscritter. If that doesn't work you can always go to the Gettysburgh Address personally and ask for a receipt.

good luck,
dan

3918. Washington State Field Day??????

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-14 05:51:26 UTC
From: ddtodd@ucdavis.edu
Message-ID: <ddtodd.141.0015DC1E@ucdavis.edu>
Source record: 265174

Hello,
I posted a few days ago asking if there was anyone active who would be running Field Day in the Raymond, Aberdeen or Westport area of Washington State. I still haven't heard back and the local emergency coordinator would really like to see what WE do. She's going on vacation or I'd invite her to our FD. So, anyone in the south-west corner of the state please speak up.

Thanks,
Dan

Jeffrey Herman <jherman@uhunix.uhcc.Hawaii.Edu> writes:

>Wow! No need to whine about 440 when we've got all THIS available.

Are FM transceivers for those bands as readily available as those for 440?

Is "homebrewing" as practical on those bands as on 440 -- referring to special construction techniques as well as availability of components that can operate at those higher frequencies?

Are propagation characteristics on those bands such that they are as suitable for FM voice communication as is 440?

No. I disagree. It is a code. Its plural is 73. Here is another word, SHEEP. Have yos seen many sheeps recently? Back to the point, 73 is not English. You would not use it in general conversation with non-amateurs. You could quite happily use it in Spanish, French or Russian. Next we will have QRX's when called by more than one station on cw .

Mike

Jim Sohn (sohn@ccnet.com) wrote:

> How about the entire GPS system? How about the INMARSAT system? How
> about all the satellite links on shipboard?

These are (more or less) line-of-sight paths in the upper UHF range
(L- and S-band) with a predictable path loss.

However, if you operate well below line-of-sight you had to allow for a
huge fade margin to fill out the shadows, since diffraction doesn't
bend the signal around corners and roofs very much and you have to rely
on reflections from buildings on the opposite side of the street.
Even the free space path loss increases rapidly with frequency (or
actually the capture area for an omindirectional antenna is proportional
to the square of the wavelength), so you have a bad initial situation
before you even start to concider difraction or reflection losses.

If you want similar omnidirectional (horisontal) coverage as with
repeaters in lower bands, you need much more ERP. The radation pattern
at the repeater site can be flattened to a few degrees, the mobile radiation
pattern to maybe 10-30 degrees and the portable to 40-90 degrees to get some
antenna gain. Beyond this, you have to use adaptive phased arrays and
have to forget about round table operation.

> Remember,
> it wasn't too long ago that the common belief was that mobile operation
> above 500 MHz wasn't feasible. If that barrier hadn't been broken, there
> would be no cellular service!

Yes, but the cell size is much smaller than in amateur repeaters.

The cell size in cellular phone systems (NMT-900 and GSM (900 MHz))
in urban areas are usually a few hundred meters. Outside urban areas
there are short towers every few kilometers along main roads with highly
directional antennas aimed along the road. This way you will get
high ERP on the road but no coverage one kilometer off the road.

To use smaller "cell" sizes in amateur systems, you need

- a high amateur density to (financially) support a large number
of repeaters
- to a number of repeater sites

- large number of _cooperative_ amateurs to build repeater networks
for any usable coverage.

The last requirement might be the hardest part :-)

> As an alternative (and less innovative),
> one could always take the point-to-point stuff out of the current
> mobile-friendly bands. This would make more room for the current mobile
> technology and put point-to-point stuff on frequencies which are more

Commercial Radio Operator License Examinations

Durham, NC -- 18 June 94 -- 9:30 am

SW Branch -- Durham Public Library: 3605 Shannon Road

Licenses attainable:

Marine Radio Operator Permit -- Element 1

General Radiotelephone Operator -- Elements 1 & 3

GMDSS Radio Maintainer -- Elements 1, 3 & 9

GMDSS Radio Operator -- Elements 1 & 7

For more info or to reserve an exam seat, contact:

Steve Modena (919)787-7618 or Terry Murphy (919)471-4018

~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~

Commercial Radio Operator License Examinations:

Durham , NC -- 18 June 94 -- 9:30 am

Who is offering it: W5YI-affiliated National Radio Examiners

Though walk-ins will be allowed, seating is limited.
To be assured a seat, contact:

Steve Modena (919)787-7618 or Terry Murphy (919)471-4018

What will be offered:
Examinations on elements 1, 3, 7 & 9

Time: 09:30 AM
Location: SW Branch of the Durham Public Library (next page)
What to bring: Cash for the fees, id, non-programable hand
calculators and good preparation

* * *Personal identification: Bring at least TWO forms of
positive identification * * *

WARNING: Anything that even resembles cheating or an attempt to
cheat will be reported *directly* to the FCC, as per regulations

How does it work: very similar to the Amateur Exams,
but with certain exceptions

1. Any or all of the currently offered elements available
may be taken
2. Elements may be taken in any order
3. Each element passed sucessfully will be recorded on a
Proof-of-Passing certificate
4. If you qualify for a license, you may prepare an FCC Form
756, or defer.
5. If you fail an element, there will no opportunity to retry
during the same session.
6. The amount of time allowed for the exams will be
reasonable, but not unlimited
7. We reserve the unequivocal right to limit seating: first
come, first served!
8. Fees charged follow this NRE rule:

"At this time, NRE requires a fixed $35 fee from each
candidate for the administration of any and all
examination elements required for each commercial license
per sitting. If any elements are failed, no license which
required the failed element would be issued and the
applicant would have to schedule another exam session and
pay another fee to obtain the desired license."

FEES MUST BE PAID IN CASH ONLY -- no checks, no exceptions.

We are absolutely obligated to be certain that you are who you say
you are: make sure that the identification that you present will
pass muster--otherwise you will not be allowed to take an exam.

~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~

Commercial Radio Operator License Examinations:
SW Branch Durham Public Library: 3605 Shannon Rd.
Durham , NC -- 28 May 94

Steve Modena AB4EL (919) 787-7618 or
Terry Murphy AB4VJ (919) 471-4018

How To Get There:

Talk-in: we will listen for this Durham repeater: 144.85/145.45

These instructions work if you approach South Square Mall via
15-501 BYPASS.

You are in the vicinity of South Square when you can see the lone
skyscraper with the "needle" tower.

Whether you are coming from I-40, headed north on 15-501
BYPASS... or coming from I-85, headed south on 15-501 BYPASS,
there will be a sign indicating "Keep Left for 15-501 BUSINESS --
South Square."

Exiting from either direction of 15-501 BYPASS leads to the same
spot.

Passing under an overpass, there is a traffic light at a cross road named "Westgate"... and the Lone Star restaurant is ahead at 2 o'clock.

Go straight ahead.

Midway to the next traffic light, there is a sign: "Next right to Auto Drive."

At the light, there is a big Circuit City store is on the left... and the only turn possible is to the right, onto Shannon Road.

Turn right at this light.

The first traffic light on Shannon Rd. is at Auto Drive and you are in the midst of South Square mall: continue straight ahead.

The next traffic light on Shannon Rd. is the 3900 block of University Drive: go straight ahead.

After passing the Shannon Manor apartment complex, the next intersection has a stop sign and is called "MLK Jr.": go straight ahead.

Heading up a small hill and reaching the crest just before the curve, you are looking straight at the Durham Library--Southwest Branch... a brick building set on the left side of and below the level of the road.

The exam site address is 3605 Shannon Road.

The exam room is visible through a very large window to the right of the building entrance.

3927. Re: "73's"

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-14 10:40:13 UTC
From: as041@FreeNet.Carleton.CA
Message-ID: <CrDuz1.EEx@freenet.carleton.ca>
Source record: 265189

In a previous article, Cecil_A_Moore@ccm.CH.INTel.COM (Cecil A Moore) says:

>Hey Mike, you need to get out of the shack more often. Before there
>was such a thing as ham radio, 73 was (and is) an English figure and
>should follow the rules of the English language, e.g. I can't believe
>the number of 73's that I have seen lately on info-hams. Try composing
>the preceeding sentence without pluralizing 73. :-)
^^^^^^^^^^^

Well, it is not too difficult...just pluralize it, do not apostrophize
it. In your context it is a plural, not a possessive.

If you want to say: <There were a lot of 73s being bandied around>, then
add the <s>. There is absolutely no reason for the apostrophe.
It is not possessive (singular or plural), and it is not a contraction.

|> cells had a lot of problems (especially Gold Peak).

I think they might be gold peak, never heard of them before but the GP is suspicious. However regarding your own cells and the ICOM charger, you need to charge them at C/10 for 14 hours. In your case this would be 100mA for 14 hours. However you probably charged them at 60mA for 16 hours. This is not enough, it is only to 70% capacity so they would be a little low. Also I haer they completely self discharge in a week, so I suppose it is best to keep them on float at low current, say 10mA until required. I charged mine at 60-70mA with the icom charger for 28 hours. I wonder if it is easy to modify the ICOM rigs to charge at a higher rate? I was not using the wall charger, I used a 12V PSU so the extra current would not be a problem. With the W2, charge current is controlled by the rig.

Mike

[[EXAMNT6.14W : 2052 in EXAMNT6.14W]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and
10 weeks after the test session. The FCC considers their
processing time to be 90 days--from the date they receive the
application. The FCC usually receives the application one
to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

Note: Beginning with applications submitted to the FCC as of March 1,
1994, Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will receive a license from the FCC that reads
"Tech Plus."

For Technician licensees who earned HF priviliges before March 1,
1994, the Technician license plus the CSCE conveying the Morse
code test credit is the only documentation issued for use of
the additional HF privileges.

****

The following test session information is provided by the
ARRL/VEC for the upcoming six to eight week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact

the ARRL Educational Activities Department (EAD) at 203-666-
1541 x219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1994 test fee is $5.75.

Hi ,tnx for all the mails u have sent me . I'm very glad to see
that they are many fellow ham-students...I think that it's time to create a
NET with the main goal of exchange ideas , ... a HF dx Net would be nice to start.The
problem rigth now are the exams ... but when they finnish we will post
again and make a sked for all ...
My best regards to all , and good luck on your exams (same to me !)
best 73's keep the dx'ing

[[EXAMNT6.14 : 2096 in EXAMNT6.14]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and
10 weeks after the test session. The FCC considers their
processing time to be 90 days--from the date they receive the
application. The FCC usually receives the application one
to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

Note: Beginning with applications submitted to the FCC as of March 1,
1994, Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will receive a license from the FCC that reads
"Tech Plus."

For Technician licensees who earned HF priviliges before March 1,
1994, the Technician license plus the CSCE conveying the Morse
code test credit is the only documentation issued for use of
the additional HF privileges.

****

The following test session information is provided by the
ARRL/VEC for the upcoming six to eight week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact

the ARRL Educational Activities Department (EAD) at 203-666-
1541 x219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1994 test fee is $5.75.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = Great Lakes ARC VEC Inc., 3040 Harrison St, Glenview, IL 60025;
708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315. Test fee for 1994 is $5.00.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999. Test fee for 1994 is $5.00.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;
919-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 615-688-7771.
The 1994 test fee is $5.75.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1994 test fee is $5.75.

Hey Ed, shouldn't that 2.45 actually be 2.54 for making the
conversion from CM to INCHES?

Just wondering.

: >honest folks communists.

Snip! Long windy, whiny paragraph removed for the good of all....

: I've been involved in ham radio, including several repeater groups, for over
: 20 years. I've put more into repeaters and repeater clubs and frequency
: coordination than you've put into radios. I've served the hams of Texas in
: various capacities for almost 10 years...how long have you been in ham radio?

28 years Jay. 28 years. You certainly seem to have a high opinion of
yourself, I'll grant you that. As far as whether you've put more into
serving amateur radio than I have, highly debatable and perhaps not the
subject of this thread.

For the record, your 10 years is a little over a third of the length of
the service to and membership in the hobby.

I've found that people who blow a lot of stack gas about how much they do
for the hobby, how long they've been in it (as though that somehow means
they are better ops than some of the FB newcomers to our hobby) usually
are mostly hot air. Your puffed up rhetoric is a prime example of this
sort of braggadacio. The rest of us are not impressed.

Mostly on this thread you've alternated between name calling, attacking
other people's dedication to the hobby, and then whining about all the
money you've put into the hobby, all the service, etc. Stop whining!
It's a hobby!

: If you want to put up and support open repeaters, great. I've been there
: before. I think there's a need for open repeaters...but where we differ is
: that I think there's a place for closed machines, too.

Well, that's your privilege. It's mine, along with a lot of other
people, to disagree with you.

We probably wouldn't disagree if the situation here weren't so out of
hand. I personally would entertain having a number of closed repeaters if
the reason could be justify and the number was limited so as not to crowd
out the possibility of large number of open repeaters. Operating a
repeater, like operating any other station, is a ***privilege**** not a

right. Do closed repeaters have a place? Perhaps. But not to the exclusion of all others as is presently the case here in Southern California. That was the topic of this thread, Jay. All of your whining about how this point of view would take away your repeater and how it fails to take into account your wonderful 10 years of service to the hobby, etc. etc. is simply off the topic.

: The only folks who want to outlaw closed repeaters - for that's essentially
: what you're calling for - are those who want someone else to make their radios
: useful. If you think that that places me on a high horse, all I can say is
: come up here and enjoy the view.

See, here's a good example of how you argue. No one except {insert name-calling or innuendo here} would disagree with Jay.

Jay, believe it or not, some of us like to conduct a discussion without name-calling and putting the other fellow down. Your approach of attacking your opponent rather than his argument belies your oft-repeated claim of how much service to the hobby you've put in. In radio clubs and in real life few people want to work with or be around people who behave in this fashion.

: >Please answer concisely. These 5 or 6 page answers you've been posting
: >have given my "kill" function enhanced utility.

: You are, of course, entitled to read what you'd like. This issue, however, is
: not one that lennds itself to concise answers; it's a knotty, complex,
: political one that's been going on for longer than you've even known about ham
: radio. I've been writing as concisely as I can while still addressing the
: issues. It's just not as black-and-white as you'd like to believe.
: --

Since we've established that I've been in amateur radio a heck of a lot longer than you, the first part of the above paragraph is exposed as being wrong (as well as snotty). As for your condescending, unpleasent diatribe about the complexity, well, thank you for the insight. But please, concision.

3937. Re: Morse Code trainers

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-14 14:28:13 UTC
From: faunt@netcom2.netcom.com
Message-ID: <FAUNT.94Jun14072813@netcom2.netcom.com>
Source record: 265202

I've been using a Morse Code trainer that I bought from Brian Jordan, G4EWJ. It has a 1 character display, so the characters can be replayed on the display for checking, as well as audibly. It's a kit, and is designed to be used without a package, so it's a bit inconvenient for carrying around. I built mine with the display board in the same plane as the main board, and carry it in a plastic box that holds the trainer and a small pair of earphones, also. It is oriented towards the UK license test, so it does auto delay up to 12WPM, although it'll go much faster, and you can get it to do Farnsworth code for 13 or even 20 WPM. It has very good tone and volume.
I also have an MFJ, and there seems to be clicks in the headphones. My Pocket Morse Code Trainer came with a single earphone, and set up for a mono earphone. The jack is a stereo jack, so I'm going to add the appropriate wire, and see how it sounds with better headphones.

Other training devices I know about are the Datong box, and "Uncle Albert's Unique Keyer" from the January 94 QST. AEA makes the MM3, I think that also seems to be useful for code practice and I'm sure there are others. The G4EWJ unit, and "Uncle Albert's" have provision for learning to send properly. Do any others?

>For the record, your 10 years is a little over a third of the length of
>the service to and membership in the hobby.

That's just the hams of Texas as a whole, with the Texas VHF-FM Society. That
doesn't include quite a bit of service locally with various repeater clubs.
Even so, I'll buy that you've been around the service, and serving ham radio
as a whole, for quite a while. Your uninformed arguments led me to believe
otherwise.

>I've found that people who blow a lot of stack gas about how much they do

I can't control that...but the fact remains that I speak about the
practicalities of coordination from personal experience. Do you?

>Mostly on this thread you've alternated between name calling, attacking
>other people's dedication to the hobby, and then whining about all the

I can throw that one right back at those who whine about not being able to
put up an open repeater on 440. Quit whining! Pick another band!

>Well, that's your privilege. It's mine, along with a lot of other
>people, to disagree with you.

I don't argue that. Everyone has the right to be wrong. :-)
When you start advocating that coordinators do patently stupid things that
will get them sued into oblivion, though, I have to stand up and yell, "HELL
NO!"

>We probably wouldn't disagree if the situation here weren't so out of

>the hobby, etc. etc. is simply off the topic.

No, it's right on topic. Operaring a repeater is a privilege that can only be
revoked by the FCC. As a coordinator, I can't tell you not to put up a
repeater.

There's simply no way to outlaw, or restrict, closed repeaters in a way that
won't get coordinators sued. There's certainly no way to _remove_ existing
closed repeaters.

My experience with the coordination process gives me the real-world experience
to back up my statements. As such, it's relevant.

>Jay, believe it or not, some of us like to conduct a discussion without

Fine. Let me know when you want to conduct a discussion in that fashion.
You're certainly not doing it now. In the meantime, I'll simply point out that
there are others in this group - and in this discussion - that can back up my
word.

>Since we've established that I've been in amateur radio a heck of a lot

I'll concede the issue of how long you've been in ham radio. That makes it all the more surprising that you still believe it's a black-and-white issue; the longer I'm involved with it, the more complex it gets. I'm being as concise as I can while still arguing the whole issue.

>

I know of no "on line" source for the commercial exam Q pool. As one of W5YI's commercial examiners I can also tell you the pool does not change next month. The only question pool that changes in July 1994 is the amateur general class exam.

What does happen next month is that the FCC is proposing adding an additional regulatory fee, last I heard it would add $105 to the cost of getting a GROL license.

To avoid the additional fee all of your paper work must reach the FCC before July. The MIT Radio Exam Team and several other National Radio Examiners groups will be offering a "last chance" exam on Saturday June 18th.

As far as study material for the MROP or the GROL, W5YI and Gordon West have just publisehd a real text book based on the current pool.
It is available from Radio Shack for about $12. I highly recommend it.

The Q pools are still the best availavble study material for the Global Maratime Distress and Saftey Systems licenses. Copies are available for sale from W5YI.

Dana Myers (myers@bigboy.West.Sun.COM) wrote:

: Procuring parts and building working gear for microwave bands is
: considerably more difficult than building 80m transmitters out
: of junk televisions. I agree amateurs should indeed get involved
: on these bands, but these bands are not necessarily valid replacement
: spectrum for the functions filled by 2m, 70cm, 33cm and 23cm.

I guess this is pretty obvious is you already *know* how to
build radios out of TVs. But, if you don't have this background,
I'm not sure how true this really is. I suspect a lot of
amateurs can no longer tell you what the specialty ICs are
used in various consumer electronics really do, much less rewire
them up in amateur applications.

On the other hand, surplus microwave stuff is often more straightforward
to deal with. You can often figure out what frequency the stuff operates
with a ruler (if it isn't marked on the case). Much of the circuitry is
still discretes, or at least nice understandable building blocks, often
with 50 ohm input and output connections. Thus, some modifications
consisist of merely tearing out all the junk you don't need, and hooking
up what you do need.

True, getting 10 watt transistors is still a challenge on most of the
microwave bands. But, low power microwave parts are relatively easy
to get and getting easier, as companies realize they have to actually
sell stuff to stay in business.

>combine two 35 watt UHF transmitters.

You could also pick a frequency that's over 1 MHz away from the opposing
transmitter and combine them with notch cavities and circulators. The method
you've described could be done easily. Wilkinson power dividers and isolators
(make sure you use two isolators per port) will do quite nicely. Measure
the heck out of it after you put it together to make sure there are no intermod
problems. This is essentially how the commercial guys do it.

I've successfully combined two duplex stations on a single antenna, but one
was 440 MHz and the other was 420 MHz. It was actually pretty simple. If
you're interested, I'll drop you a copy of the diagram on it.

Source record: 265204
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

DIGEST OF ARTICLES -- QST January, 1994

Following are digests of articles printed in the January, 1994 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. Subsequent issues will be posted one per week until they "catch up" to the current date in mid-1994, thereafter monthly.

It is hoped that other hams will volunteer to post similar digests of the other ham technical publications such as QEX, CQ, 73, COMMUNICATIONS QUARTERLY, RTTY JOURNAL, et al. Especially desirable would be digests of publications in other countries, such as the RSGB RADIO COMMUNICA-TIONS and ham magazines in Europe, Japan, Australia, and other countries around the world. We English speakers would especially enjoy them if they were translated into our language, but they would also be valuable additions to the world's knowledge if they were posted in the language of origin. Who knows? Some bi-lingual ham somewhere might translate them into English and re-post them.

Worldwide communications are getting better and better. The time has come to make the world's ham press available to all hams throughout the world!

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:An Inexpensive SSTV System
Author>Vester, Ben - K3BC
Source>QST Jan 94, pp. 27-29
Abstract>An SSTV receive/transmit system entirely in software. It requires only a PC, simple interface, and conventional transceiver.

Digest>In this article the author describes his development of a complete SSTV transmitting and receiving system done entirely in software! The only electronic apparatus required is an amateur transceiver, a personal computer, and a very simple interface using one integrated circuit (IC), plus a dozen passive components.

He has made the software available free, and it can be downloaded from the ARRL Bulletin Board at (203) 666-0578. The name of the file is "vester.zip".

The kernels of the program are written in assembler language for speed and efficiency, but additions and modifications can be made in Basic and "hooked" onto the kernel using "POKEs".

The computer requirements are a DOS machine using an 80286, or later, microprocessor, although a '386 or better at 16- or 33-MHz. clock rate will give definitely better results. It should have a VGA-compatible color monitor and a "Super VGA" (SVGA) video adapter card.

The transceiver can be any conventional SSB rig on HF, VHF, or UHF. If it is to be used with an AM or phasing-type SSB rig, or with FM transmitters, audio filtering will probably be required to assure sufficient spectral purity for good pictures.

The article shows a number of photographs of the author's CRT screen. The color and resolution are very impressive, indeed.

Title>TA2:The Nearly Perfect Amplifier
Author>Measures, Richard - AG6K
Source>QST Jan 94, pp. 30-34
Abstract>Auxiliary and protective circuitry that can be added to any tube-type amplifier, greatly enhancing reliability and operating life.

Digest>The title to this article might more properly be called "The Nearly Perfect Protective and Auxiliary Circuits for an Amplifier". The author makes a thorough and penetrating analysis of the auxiliary circuitry of a tube-type RF power amplifier, but does not discuss the RF aspects, at all! He does an excellent job of pointing out how relatively inexpensive additions and modifications can greatly improve the reliability and life, as well as the performance, of most modern commercially-built amplifiers.

He considers each aspect of the power tube and power supply, in turn. First, he addresses the extreme sensitivity of a power tube's operating life expectancy to tiny changes in filament voltage and strongly recommends a voltage-regulated power supply. Second, he makes a convincing case that EVERY power tube should have a time-delay circuit to apply reduced voltage to the filament for a warm-up period before raising it to full rated voltage.

Regarding the grid circuit, he observes that he has never seen an amplifier damaged by excessive HF grid current, but excessive grid current caused by VHF or UHF parasitics is a very common cause of tube destruction. Nevertheless, many commercial amplifiers are built with protective circuits to prevent excessive HF grid current but with totally inadequate parasitic suppression. He recommends a foolproof method of protecting the grid, which is insertion of a carbon-film resistor as a fuse.

Another very common cause of severe damage to amplifiers is from accidental shorts of the high-voltage to ground. They can be caused by insects, fine threads sucked into the blower, or a myriad of other causes. At the instant of a short, the full charge in the power-supply filter capacitors is delivered and a peak current of hundreds of amperes passes through the plate current meter and, probably, causes an arc at the point where the short occurred. He cites one case in which the meter exploded!.

At the instant of the capacitor discharge caused by a short, the negative high-voltage will surge to several kilovolts. The grid-current meter, normally connected from the negative high-voltage terminal to the chassis will thus also be subjected to a surge of hundreds of amps. Simultaneously, if the tube uses an indirectly-heated cathode, the negative high-voltage surge may cause an arc from the cathode to the filament, destroying the tube. All of this damage can be prevented by the liberal use of protective diodes that cost about 20-cents each!

Next, the author looks at power supplies. The common use of parallel resistors and capacitors across each rectifier diode in a high-voltage rectifier is shown to be self-defeating. Instead, he recommends metal-oxide varistors. The voltage across filter capacitors should be equalized with resistors across each series capacitor, but care must be used to choose the proper resistor. He recommends 3-watt, 100,000-ohm metal-oxide-film resistors for 450-volt capacitors.

The article concludes with several other recommendations regarding high-speed receive/transmit relays, VHF parasitic suppressors, and some other suggestions for specific cases. The author summarizes by pointing out that the total cost of everything that he recommends would likely not exceed $100, and might be considerably less. The end result would be a dramatic improvement in operation and safety of almost any amplifier on the market today.

Title>TA3:Computer-Controlled Electronic Test Equipment - Part 2
Author>Portugal, Ron
Source>QST Jan 94, pp. 35-41
Abstract>Construction of a "mother board" to hold instruments to be built as described in future installments. Also construction details for building an L-C meter covering ranges of 1-microhenry to 5-henrys and 1-picofarad to 10,000-microfarads.

Digest>In this installment, the author describes the construction of a "mother board" to hold all of the instruments to be built. Considering the total number of cables, leads, jumpers, and miscellaneous wires that would otherwise decorate the workbench, the use of a mother board that contains all the interconnecting wires on its etched surface can be seen to be a great advantage. The board is 12.5 x 7 inches (318 x 178 mm.) and contains 9 50-pin headers, each of which will accept a 5 x 6 inch (127 x 152 mm.) project board. In addition, there is a single 50-pin socket to expand the bus onto a second chassis, for future expansion.

The power supply, construction of which was described in Part 1, is the first module to be installed on the mother board. The rest of this article is devoted to the construction of an L-C meter. It provides an unusually wide measurement range of both variables. It measures inductance over a range of 5-million-to-1 (5-henrys to 1-microhenry). The capacitance range is even greater, 10-million-to-1 (10,000-microfarads to 1-picofarad). Readout is on a 4-digit counter. Accuracy is determined by the precision of the components used but, since the measurements are developed in the computer, any errors can be removed by calibration using any arbitrary number of standard capacitors and inductors to establish points on the curve.

Capacitance is measured by using the fact that if a capacitor is charged from a known voltage source through a known resistance, its charging rate is a measure of the capacitance. The meter measures the length of time the unknown capacitor requires to charge from one known voltage level to another.

Inductors are measured by pairing them with known capacitors to form oscillator tank circuits. The frequencies of the resulting oscillations are measured and the inductance calculated from the resonance equation: L=1/C*(2*pi*f)^2.

From the preceding description, it can be seen that the raw measurements of both capacitances and inductances are time durations expressed as numbers of cycles counted in the signal from an oscillator. The oscillator used in capacitance measurement is a high-precision square-wave generator; in the inductance measurement, the oscillator is controlled by the L-C tank circuit. In both cases, the cycles are counted and the result entered into registers in the computer for conversion to engineering units.

The author is offering partial kits of parts for both the mother board plus power supply, and the L-C meter modules. His price for the former, including shipping in the continental United States, is $100. For the

L-C meter, $81. The only parts not included are a mounting frame for the mother board and a power switch with LED indicator for the power supply.

Title>TA4:Uncle Albert's Unique Keyer
Author>Ulbing, Sam - N4UAU
Source>QST Jan 94, pp. 42-44
Abstract>Construction of a keyer that displays ASCII characters as they are formed, and the code speed, on an LCD display.

Digest>This article describes construction of a keyer combined with a code reader that displays the ASCII characters that are being sent on a ticker-tape-like LCD display. It also calculates the code speed and displays the words-per-minute on the same display.

The keyer can be actuated be either an iambic key or an external bug. It also includes a 47-character memory and a random-character code-practice generator that displays what it sends. It can be actuated at speeds ranging from 8- to 40-wpm.

The author's main goal in designing the code-reader and display was to improve the sender's "fist". The code reader does not lie. If the sender runs the letters together and, for example, makes "ti" into "d", the display shows it. If s/he forms an unintelligible character, the display shows an "&" (ampersand). Most CW operators would consider it a blessing if all other operators would use such a device!

A complete wiring diagram and parts list is included. The unit uses a microcontroller type 87C51, the LCD display module, and a mere handful of other parts: 3 transistors, 4 diodes, an oscillator crystal, and about a dozen resistors and capacitors.

The author offers a pre-drilled PC-board and a pre-programmed microcontroller with construction information and operating instructions for $38; a more complete parts kit including all electronic parts excepting only the enclosure and miscellaneous hardware for either $60 or $67, depending upon LCD size. He does not offer his software separately.

Title>TA5:III - Capacitors
Author>Bergeron, Bryan - NU1N
Source>QST Jan 94, pp. 45-48
Abstract>Elementary description of capacitors used in radio circuits.

Digest>This is the third article in a series describing and illustrating electronic parts. Types of capacitors are described, illustrated in photographs, and the symbols used in circuit diagrams. The electrical characteristics of the various types are discussed in detail.

The types of capacitors discussed at length are: electrolytics, film, air-variables, ceramics, mica, oil, and paper. Electrolytics are

sub-classified as aluminum or tantalum; film as polypropylene, polyester, polycarbonate, polystyrene, polysulfone, or metalized film.

Electrical characteristics described are capactitance, tolerance, rated voltage, equivalent series resistance, dissipation factor, dielectric loss-angle, frequency ratings, operating temperature limits, leakage current, temperature coefficient, power-handling capability, and expected operating life. The schemes used in labeling small capacitors is explained.

PRODUCT REVIEWS (PR)
Conductor: Mark Wilson - AA2Z
QST Editor

Title>PR1:The Yaesu FRG-100 General-Coverage Receiver
Author>Newkirk, David - WJ1Z
Source>QST Jan 94, pp. 73-75
Abstract>Review of Yaesu's FRG-100 receiver for the SWL market. Performance is good enough to rate as a respectable amateur station receiver.

Digest>The Yaesu FRG-100 is a receiver designed for the Short Wave Listener market but performs well enough to do a respectable job as an amateur station receiver. In fact, it offers one performance feature that most current amateur transceivers do not provide. In CW operation, one can select the sideband being received. This, combined with RIT and variable pitch control allows one to use zero-beat as the ultimate audio notch filter.

The circuit design is completely new; it is not just the receiver portion extracted from the design of one of the current Yaesu transceiver models. It comes with 52 programmable memories that store both frequency and mode, digital frequency counter with readout to the nearest 10 Hz., scanning of either the memory bank or the band, clock/timer, and switchable i.f. selectivity of 2.4-, 4-, and 6-KHz. as standard. Optional features available are: CW crystal filters - 250 and 500 Hz. width, FM reception, and a high-stability crystal synthesizer.

It does not include a preamplifier, but its sensitivity on SSB and CW for 10 dB. signal-to-noise ratio is better than 0.25 microvolts. With a 500 Hz. CW filter, the noise floor was measured as better than -138 dBm. on both 80- and 20-meters. The dynamic range measured better than 113 db. on the same two bands. The third-order intercept was 1.5 dBm. on the 20-meter band.

The receiver's first i.f. is at 47 MHz. and its image rejection is better than 60 dB. over the entire 1.8- to 30-MHz. HF range. The reviewer's final summary states: "...the compact FRG-100 packs a surprising performance wallop at a price that should make its competition worry." That price (list) is below $900, including one CW

filter and the FM receiving unit.

Title>PR2:The MFJ-8100 Shortwave Regenerative Receiver Kit
Author>Newkirk, David - WJ1Z
Source>QST Jan 94, p. 76
Abstract>Review of a kit for building a regenerative receiver, using modern components. The completed unit gives surprisingly good performance in a very small, lightweight, attractive package.

Digest>Many old-time hams have speculated about the result of someone using modern components and construction techniques to build a receiver, the design of which dates from pre-superheterodyne times. Now they can find out by building a kit available from MFJ. The result will be a receiver of surprisingly good performance built in a small, lightweight, and very attractive cabinet, powered by a single 9-volt battery.

The circuit would be a classic "TRF" (Tuned Radio Frequency) except that the r.f. amplifier stage is broadbanded, not tuned. It uses three JFETs and an integrated-circuit audio amplifier. One of the JFETs is an untuned, grounded-gate r.f. amplifier and the other two are used as a Butler-oscillator regenerative detector. The detector's tuned circuit is switched over five bands from 3.5- to 22-MHz. The tuning capacitor has a built-in 6:1 reduction drive which, the reviewer found, "tunes the receiver well".

The ARRL laboratory put the little receiver through performance tests similar to those given to the latest state-of-the-art superheterodyne receivers and found a quite-respectable sensitivity of -105 dBm. at 4- and 10-MHz. At 20-MHz., it was -90 dBm. Of course, with no tuned circuit ahead of the detector, the selectivity is not very good but nevertheless, its two-tone, third-order dynamic range measured 70 dB. with 100-KHz. tone spacing.

This receiver would seem to be a fitting partner with a QRP rig to test the limits of communications using minimum equipment. In addition, it would be a nostalgia trip for many old timers!

Title>PR3:Heil Pro-Set Headset
Author>Wilson, Mark J. - AA2Z
Source>QST Jan 94, p. 77
Abstract>A headset with integral microphone designed for professionals.

Digest>The Heil Pro-Set is a stereo headset/microphone combination assembly designed for professional use. The headband is thoroughly padded and adjustable with detents. The cushions on the ear pieces are replaceable and comfortable. The ear pieces are attached to the headband through a ball joint that allows considerable variation in angle in order to provide a comfortable fit for people with varying size and shape heads. The microphone is attached to the assembly by a swiveling boom that can also be adjusted in shape. It is easy to place

the mike at its most comfortable location or to swivel it up and out of the way when it is not in use.

The cabling from both ear pieces and the microphone pass through a common cable. At the plug end, the headphone plug is a conventional 1/4-inch (6-mm.) stereo phone plug. The microphone plug, however, is a 1/8-inch phone plug. In use, it is plugged into a mating socket on one end of a 12-inch (30-cm.) jumper, the other end of which terminates in a plug selected to fit the user's specific requirement. Transceivers differ in the microphone connector and Heil provides a selection of jumpers to fit. A purchaser of the headset is given a choice of jumpers included in the purchase price. Additional jumpers can be bought separately.

The reviewer found that the headphones "sound great", they are comfortable to wear for extended periods, and the microphone produces audio that is "clean, crisp, and punchy".

The list price, including one jumper, is $135; additional jumpers $13 each.

HINTS AND KINKS (HK)
Conductor: David Newkirk - WJ1Z
Sr. Asst. Technical Editor

Title>HK1:Ferrite Shield-Current Chokes Cure Stray RF on Vertical-Antenna Transmission Lines
Author>Palmer, Bruce R. - K0WM
Source>QST Jan 94, p. 78
Abstract>Construction of an antenna feedline choke using ferrite cores strung on a piece of coax.

Digest>The author had considerable difficulty resulting from r.f. feedback in his shack when using his Kenwood TS-940S and a kilowatt amplifier. He found that a ferrite-bead shield-current choke in the antenna feedline where it enters his shack solved the problem.

He built the choke using 50 Type FB73-2401 ferrite beads, 15-inches (38-cm.) of RG-303 coax, and two coax connectors. He used PL-259 plugs with inserts designed for RG-58 cable, which is larger in diameter than the RG-303. To make a good fit, he put a 1-inch (2.5-cm.) length of heat-shrink tubing over the cable at the point where the connector was to be attached.

To assemble the choke, he installed a connector on one end of the coax, threaded on the 50 beads, and put a length of heatshrink tubing over the entire string of beads to hold them in place. Then he finished the job by installing another PL-259 on the other end.

Title>HK2:Another Simple Interface for Transceivers with RS-232-C Ports
Author>Shelhamer, Mark - WA3YNO
Source>QST Jan 94, p. 78
Abstract>Interface converting RS-232-C voltage levels to TTL, and vice versa, using readily available components.

Digest>In Hints and Kinks, QST Jan 92, WB4ETY described a simple level converter for connecting TTL-level serial ports to RS-232-C ports. The level conversion is often required because TTL-level voltages are 0 and +5, whereas RS-232-C levels are bipolar. However, some computer RS-232-C interfaces will work with TTL level signals, and no level conversion is needed for signals going from the transceiver to the computer. However, the RS-232-C levels from the computer back to the transceiver must be clipped, or voltage-limited, to avoid damage.

For such cases, Mr. Shelhamer presents a circuit diagram using a single 74LS08 low-power Schottkey chip to make the interconnections. The circuit is not as simple as WB4ETY's, but it utilizes a chip that is much more readily available than the Maxim MAX232 that he used.

Title>HK3:Cutting Printed Circuit Boards
Author>Gibson, Roger - K4KLK
Source>QST Jan 94, p. 79
Abstract>An office-type paper cutter does an excellent job cutting PC board material, but the blade dulls rapidly and becomes useless for cutting paper.

Title>HK4:Adding Unsquelched Audio Output to the ICOM IC-228A Receiver
Author>McLellan, Scott W. - ND3P
Source>QST Jan 94, p. 79
Abstract>Adding a separate unsquelched audio output for packet so the operator can continue to listen to the squelched output.

Digest>The author uses his ICOM 2-meter rig for both packet and voice. Because of the time delay in opening squelch, he operates the rig with its squelch wide open. To avoid annoying noise when no signal is present, he added an extra audio output line that is not squelched for use on packet so that he can leave the normal squelch setting in use but still have instant packet operation.

To carry the unsquelched audio signal to the TNC, he disconnected the lead that previously used pin number 4 on the microphone jack. He obtained the unsquelched audio signal by tapping into the audio amplifier chain in the receiver portion at a point indicated in the schematic illustrated in the article.

The signal that was previously carried on pin 4, which he disconnected, was "T.SQL BUSY", which was never used in his modes of operation.

Title>HK5:Minimizing TVI From the Yaesu FT-757GX Transceiver
Author>Lee, Mitchell - KB6FPW

Source>QST Jan 94, p. 79
Abstract>Stopping leakage of r.f. out through the power cord.

Digest>Mr. Lee's transceiver generated TVI even when he was using a dummy antenna. He found that harmonics were leaking out of the rig through the 12-volt power cord. He lists 4 steps that may be used to stop the leakage: (1) Isolate the d.c. input line to the final amplifier. Current is carried by two Teflon-insulated wires from the power connector to the amplifier board. Slip as many ferrite and powdered-iron toroids and sleeves as possible over both. (2) While the wires are still disconnected, add by-pass capacitors at the Jones plug. (3) Check for TVI using the dummy antenna. If some is still occurring, go to step 4; otherwise the job is finished. (4) Shield the power cable using large diameter braid. Connect a banana plug to the braid at the transceiver end and plug it into the adjacent ground lug.

Title>HK6:Laundry-Detergent Boxes Store QST
Author>Steinhorst, Ted - KA2BIG/7
Source>QST Jan 94, p. 79
Abstract>Boxes the right size to hold one year's QSTs.

Digest>The author has discovered that a 9-pound, 13-ounce (4.45 kg.) size box of the detergent ALL will hold more than a year's worth of QSTs upright. To prepare the empty box for this use, he makes a diagonal cut across the front, whereupon it becomes a fine "poor man's" magazine holder.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel - N1FB
Associate Technical Editor

Title>TC1:Large Antenna Coils
Author>Johns, Bob - W3JIP
Source>QST Jan 94, p. 80
Abstract>Describes a method of building large, heavy antenna coils.

Digest>This letter describes, and illustrates with a drawing, a method of construction of very large and relatively heavy antenna coils. They are wound of copper tubing held in place by three spacers located around the periphery of the coil at 120-degree angular spacing.

The spacers are made of PVC pipe split longitudinally. The two halves of the pipe are squeezed on either side of the coil turns and drawn down tightly with 3 or more sets of nuts and bolts. A notch is cut in each half of the pipe at the point where the coil turns are clamped, thereby firmly holding them in place.

The drawing shows the assembled coil and the pieces of pipe that form the spreaders connected together using elbows, tees, and sections of pipe leading to a coupling that is screwed onto the end of the "metal element" of the antenna. The drawing is not dimensioned, but the use of

so many pipe fittings in the mechanical support implies that the antenna, coil, and all, are very large, indeed.

Title>TC2:More on Electrical Protection Devices
Author>Hart, Lee A. - N8DUA
Source>QST Jan 94, pp. 80-81
Abstract>Additional means of protecting against reversed-polarity power supply.

Digest>This letter adds suggestions for protection against reversed-polarity power supply, supplementing the ideas in Covington's article in QST Jul 93, pp. 40-41: "Reverse-Polarity Protection for Your Gear". The following suggestions are included in the letter:
(1) Schottkey diodes have only half the voltage drop of silicon diodes, but their PIV ratings are limited to 20- to 40-volts.
(2) Germanium diodes have even lower voltage drop and can have PIV as high as 200 volts.
(3) For high currents, use a PNP germanium power transistor as a diode. Tie the base to the collector to act as the cathode and use the emitter as the anode.
(4) Use a high-power bipolar transistor wired with the input voltage to the emitter, the output from the collector, and the base tied to ground through a resistor chosen to hold the base current to from 2 to 10 percent of the peak output current. If the input voltage will exceed plus/minus 6 volts, add a blocking diode in series with the base resistor. This circuit protects not only against reversed polarity, but also against a dead short on the output.
(5) Use a bridge rectifier between input and output. This not only protects against damage due to reversed polarity, but also corrects it.
(6) Use a relay: put a blocking diode in series with the relay coil so it will actuate only if the polarity is correct.

NEW HAM COMPANION (NHC)

The New Ham Companion is a regular monthly section in QST that concentrates on articles of primary interest to newcomers to ham radio.

Title>NHC1:Test Day
Author>Bowles, Chester S. - AA1EX
Source>QST Jan 94, pp. 62-63
Abstract>A description of what happens during a license exam session; describes the functions of the Volunteer Examiners; and lists what is required of the examinees.

Title>NHC2:The Doctor is IN
Author>Various

Source>QST Jan 94, p. 64
Abstract>Questions and answers, general.

Digest>In this monthly column, questions discussed this month are: the correlation, if any, between S-meter readings and RST reports; a method that sometimes works to enhance the printing on aged glass vacuum tubes to identify the tube number; the meaning of solar flux, A-index and K-index; the meaning of QSZ; the slight delay that most transceivers exhibit between the actuation of the push-to-talk button and when the rig actually begins to transmit; and the "World-Wide Packet Pals Directory".

Title>NHC3:A CHEAP Way to Hunt Transmitters
Author>Rickerd, Glen - KC6TNF
Source>QST Jan 94, pp. 65-66
Abstract>Direction finding with an HT and a foil-wrapped mailing tube.

Digest>This article outlines a very simple and surprisingly effective way that any hand-held VHF/UHF rig can be made into a radio direction finder. One needs only a mailing tube with sufficient diameter that the rig can be inserted into it. Wrap the tube with aluminum foil and secure it with tape. Hold it vertically and, while listening to a signal, lower the HT into the tube until the signal strength begins to drop. The HT should be suspended from a cord or carrying strap. Hold tube and all against your chest and tune in the signal being sought. Turn your body slowly around, noting the difference in signal strength. You will notice a deep null that will be quite sharp at some particular bearing. At that bearing, your back is directly facing the direction from which the signal is being received. That is all there is to it!

This method works because your body is acting as an attenuator of signals being propagated directly from your rear. Putting the HT into the tube reduces the signal level to the point that the apparent sensitivity of the null is enhanced.

Title>NHC4:Where's My Mail?
Author>Patterson, Dave - WB8ISZ
Source>QST Jan 94, p. 67-69
Abstract>Using the Amateur Packet Radio Network.

Digest>This article describes the Amateur Packet Radio Network, how it works, and how to use it. It is made up of dedicated hams who volunteer their efforts and their equipment to the task of transmitting messages for no compensation other than the satisfaction of getting the job done.

With very few exceptions, every ham in the "lower 48" states is always within easy reach of a packet bulletin board system (PBBS) which s/he can use to tap into the network and send or receive messages to and from other hams. All the sender/receiver needs is a 2-meter FM transceiver (even an H-T), a terminal-node controller (TNC), and a computer.

To send a message to another ham, it is only necessary to know the radio address of the PBBS where the intended recipient picks up his/her mail. The sender composes a message in the manner described in the article and sends it by packet to the local PBBS. The computer at the local PBBS scans the address, and "decides" from information stored in its memory, to which PBBS it should be sent to advance it toward its ultimate destination. This happens again and again until the message arrives at the destination PBBS, marked for the recipient to claim.

The author urges all hams to participate in this pleasurable aspect of amateur operating. For further information, he recommends obtaining a copy of YOUR PACKET COMPANION, by Steve Ford, WB8IMY, published by the ARRL.

Title>NHC5:Do You Need an Antenna Tuner?
Author>Ford, Steve - WB8IMY
Source>QST Jan 94, pp. 70-72
Abstract>Description of antenna tuners and their uses.

Digest>This is a brief explanation of what an antenna tuner is, what it does and, equally importantly, what it does not do. One should use an antenna tuner if:
(1) You want to use open-wire feedline to the antenna.
(2) If you want to operate the antenna on bands other than the one for which it was cut.
(3) The antenna has a narrow SWR bandwidth.

One should not bother with an antenna tuner if:
(1) The indicated SWR without a tuner is 1.5:1 or less. Making the SWR seen by the transmitter less than 1.5:1 will yield no additional benefits; it is good enough the way it is!
(2) At VHF/UHF. Use of an antenna tuner will reduce the SWR "seen" by the transmitter but will not affect the SWR on the feedline. High SWR on a feedline at VHF/UHF causes very high loss of power. The problem must be corrected at its source: the antenna.
(3) If you are suffering to TVI. Contrary to common opinion, use of an antenna tuner will probably have little effect on interference problems.

Various features to look for in antenna tuners are explained, such as roller- or tapped-inductors, built-in SWR meters, a built-in balun, and others. Also the author makes recommendations regarding power ratings and whether to buy or build a tuner.

RADIO TIPS (RT)

These are short items, scattered among the articles in the NEW HAM COMPANION section.

Title>RT1:Those Versatile Hand-Helds
Author>Kleinschmidt, Kirk - NT0Z

Source>QST Jan 94, p. 66
Abstract>General description of hand-held VHF/UHF transceivers (HTs).

Digest>The author makes a persuasive case for the fun of using a hand-held VHF/UHF FM transceiver. He describes using it to access a repeater, using it from an automobile, or while walking around a flea market to keep in touch with friends. He also suggests using it from the shack with an outdoor antenna, and with a TNC, in the packet mode.

Title>RT2:Packet Snooping
Author>Ford, Steve - WB8IMY
Source>QST Jan 94, p. 69
Abstract>Monitoring packet traffic to learn about local activity.

Digest>Newcomers to packet radio can find out what is going on in their area by using the command: MCOM ON, which causes the system to display every packet it hears on a particular frequency. Some TNCs use a variation of MONITOR, rather than MCOM, to do the same thing.

From watching this activity, one can learn the call signs of local PBBSs, personal mailboxes, nodes, and digipeaters. Then s/he can try connecting to some of these stations and will soon learn which are within reach and which are out of range.

Title>RT3:Log It or Lose It
Author>Kleinschmidt, Kirk - NT0Z
Source>QST Jan 94, p. 72
Abstract>Using a station log book.

Digest>All hams are encouraged to use a log, even though it is no longer required by FCC regulations. A record of QSOs is necessary for awards and contests; it is also a good place to record changes of equipment, maintenance procedures performed, or modifications made. Also for memory's sake, it is a lot of fun to review old logbooks and recall pleasant QSOs.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:Amateur Radio Postage Stamps
Author>Welsh, Bill - W6DDB
Source>QST Jan 94, pp. 22-26
Abstract>Summary of postage stamps that have been issued honoring ham radio.

Digest>Many countries in the world, including the USA, have issued stamps that honor ham radio, or for other reasons are of special interest to hams.

This article explains how stamps can be obtained, how they should be handled, stored, and/or exhibited as a collection, and the fact that some collectors prefer to collect blocks of stamps or "covers" bearing the stamps, rather than just the stamps, themselves. "Covers" are cards or envelopes to which the stamps are affixed and which, perhaps, have been sent throught the mail.

As a 2-page "side-bar" with the article, is a list of the stamps that have been issued by many countries specifically honoring ham radio. The author has assembled a larger list of stamps that are of special interest to hams, although they do not specifically honor ham radio, per se. That list may be obtained for an SASE sent to Technical Department Secretary, ARRL, 225 Main St., Newington, CT 06111; ask for the "Stamp List".

The article also includes a list of "Sources of Help", including the addresses of certain stamp dealers who specialize in amateur radio stamps.

Title>GI2:Mother Nature's Radio
Author>Schneider, David - AD4CC
Source>QST Jan 94, pp. 49-51
Abstract>VLF signals from natural causes.

Digest>Phenomena that occur in earth's atmosphere and in adjacent outer space cause a variety of radio signals at very low frequencies. In fact, most of them are at frequencies normally considered audio, i.e. under 20 KHz. But they are electromagnetic, not acoustic, so can only be detected by a radio receiver.

Modern hams may be surprised to learn that radio waves at audible frequencies can propagate for long distances. But the pioneers of early radio were very aware of it. Much traffic was handled at frequencies below 20 KHz in the 1920's and '30's.

Natural radio noise, or QRN, is caused primarily by lightning and by emanations from the sun. Thunderstorm static is well known to everyone, and is a very broad-band effect, but most of the radio energy is concentrated at frequencies below 5 KHz. for a very good reason. The wavelength of a 5 KHz. radio signal is about 60 km. (36 miles). This is the same order of magnitude as the height of the D-layer that defines the ionosphere, so the space between it and the ground acts as something like a waveguide. Using it, "ground wave" signals easily propagate around the world.

Compiler's Note: During World War 2, the USAAF Weather Service maintained a long-range storm tracking net (called "Sferics") that accurately plotted the positions of thunderstorms across thousands of miles of both the Atlantic and Pacific Oceans. The nets used simple radio direction finders operating at 10-KHz., with several stations based on islands hundreds of miles apart, to get precise triangulation on the positions of lightning strikes.

The same lightning-induced signals also propagate through distances even more vast using the earth's magnetosphere. In this way, very low frequency radio waves leave the earth and travel through a great loop of more than 100,000 miles (170,000 kms.) in a beam that is approximately aimed at a spot in the opposite hemisphere at about the same longitude and the opposite latitude (the "conjugate point") from where it originated.

During transit the magnetosphere, the lower frequency components of the static are delayed relative to the high frequencies. Consequently, when one listens to the raw signal, that is the acoustic signal that accurately reflects the frequencies of the radio signal, one first hears the high frequency; over a second or two, it rapidly drops to a low frequency. This is called a "Whistler". There is so little attenuation of the signal during its passage through the magnetospere that the same signal can bounce back and forth several times between the point of origin and the conjugate point. The more bounces that the signal takes, the greater is the time delay between the high- and low-frequency components. Accurate recordings of Whistlers give valuable information regarding the ionosphere and the magnetosphere.

Amateurs can help by recording Whistlers, in cooperation with studies now being conducted by NASA and by Northern Kentucky University with a NASA grant. The author requests that interested hams contact him at: Northern Kentucky University, Department of Physics and Geology, Highland Heights, Kentucky 41076.

Title>GI3:Before Spark
Author>McElroy, Gil - VE1PKD
Source>QST Jan 94, pp. 57-59
Abstract>Wireless communications before radio.

Digest>Most people believe that Marconi "invented" radio. To some extent, he deserves that credit because he made a practical communications system out of what was, before his work, an obscure laboratory phenomenon. But other experimenters had succeeded in transmitting intelligible electrical signals over appreciable distances decades earlier than Marconi's work. This article describes some of them.

Samuel F. B. Morse, after he perfected the telegraph, experimented with wireless telegraph using water to carry the electric current. In 1842, he succeeded in transmitting a telegraph signal across a river, a distance of nearly a mile.

The first person who succeeded in transmitting through air was apparently Dr. Mahlon Loomis, a dentist. At the close of the Civil War in 1865, he flew two kites, carrying wires, from mountain tops 14-miles (23-kms.) apart. The wire from one kite was attached to ground through a telegraph key; the other kite-wire was grounded through a galvanometer that could measure very small currents. When he operated the key, detectable changes of current occurred in the other kite wire. He was

granted a patent on his system in 1872, but no known attempt was made to make use of the phenomenon commercially. Interestingly, the experiment was duplicated 44 years later in London where, during a hailstorm, experimenters successfully communicated over a distance of 3-miles (5-km.)

In a parallel development, the idea of communicating by electrical induction occurred to numbers of people. In 1845, John Wilkins of Britain, proposed communicating across the English Channel by electro-magnetic induction. Not until 1891 was a successful demonstration of such communication made. That was done by an American, John Trowbridge. Using enormous wire coils mounted on a ship, he demonstrated that he could induce signals in a similar coil on the shore over a short distance, but even he admitted that he saw no practical value in the system.

A few years later, several individuals conducted experiments to create "wireless telphony". The most successful one was Nathan B. Stubblefield, who demonstrated two telephones communicating by an inductive link in Murray, Kentucky in 1902. His coils were not tuned, but he stated his intention to develop a method by which several, separate communications could be conducted using the same coils at the same time, implicitly anticipating some aspects of radio. His experiments convinced the Legislature of the State of Kentucky which, in 1944, resolved that Nathan B. Stubblefield was "the true inventor of radio".

Not going to mention any callsigns or names but RadioKit was founded by a
very nice couple who are well known in amateur circles in NE and all over.
They no longer own it and the present owner does not seem to be interested
in providing the level of service and quality that was originally there
under the earlier mangement. In fact the previous owners are disappointed
with how things are being presently handled. Thats all I will say except
this should be a wake-up call to the present owner.

>When you start advocating that coordinators do patently stupid things that
>will get them sued into oblivion, though, I have to stand up and yell, "HELL
>NO!"

Jay,
The one point that you keep bringing up that gets under my skin is this issue of coordinators getting sued. While I will grant you that it very likely could happen, and that defending yourself against any lawsuit can be expensive and time consuming, it doesn't wash as a legitimate reason for setting the coordination policy a certain way.
I would hope that at no time the coordinators said to the repeater trustee "We are going to coordinate your repeater exclusively on these frequencies for the rest of time." I see no basis for a lawsuit if they coordinate another repeater on the same frequency. (That's not to say it won't happen. People sue all the time for all sorts of reasons, valid or not.) There are all kinds of ways of insulating yourself from lawsuits, though. Find someone with no visible assets willing to be the coordinator and put up with all the legal flak.

Again, people will disagree and debate as to whether policies are "patently stupid" or brilliant and effective, but I would hope the policies are decided based on something other than who is threatening a lawsuit.

3952. Re: Microwave bands

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-14 18:52:58 UTC
From: phil@hansen.ncd.com
Message-ID: <2tkuaa$1u9$1@rosebud.ncd.com>
Source record: 265210

I have had two 1.2 GHz repeaters in operation for an number of years, one for over three years, the other for over 2 years.

When I first put them up, a lot of people were saying that it would not work.

Well 3+ years later, they do work. When compaired to 70cm (440MHz) repeaters at the same repeater site the 1.2 GHz repeaters work about the same. There are differences. Sometimes the 70cm repeater has better coverage, but also sometimes the 1.2 GHz repeater has better coverage!

The biggest problem with moving up to the microwave bands is that they require more care. Using crapy coax, bad connectors, etc just will not work. In checking out alot of the repeaters in the Bay Area, it is pretty clear that many of these folks would have no success with any of the microwave bands. They can barely keep the 2M/70cm repeaters working.

Some of the Hams in the Bay Area are starting to experiment with 2.4 GHz. Fun stuff!

Bottom line... If you have not tried it, try it! There is life above 1GHz! You will be surprised!

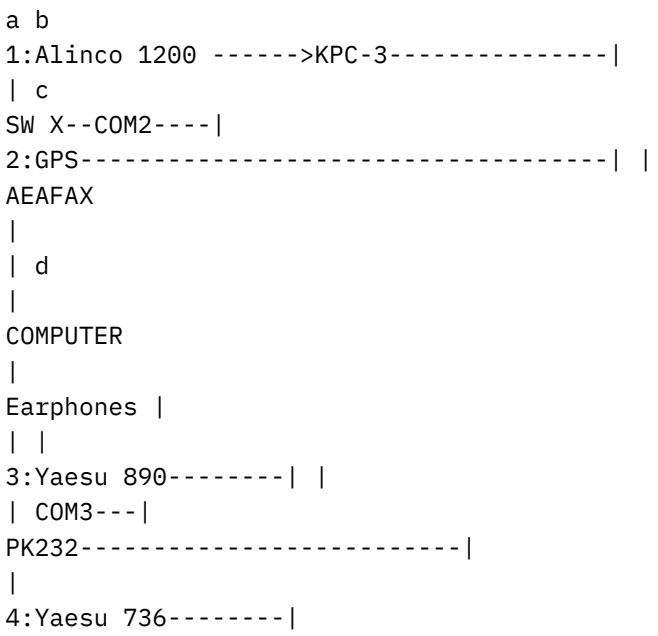
3953. Help!Packet everywhere!

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-14 19:08:44 UTC
From: wejones@cbda9.apgea.army.mil
Message-ID: <9406141508.aa01906@cbdcom.apgea.army.mil>
Source record: 265211

Sorry for attention grabbing title, but I'm confused. I have the following:



The Alinco / KPC3 is kept on 24 hrs/day, on the local packet freq. What I have noticed is that packets received on the Alinco can be heard clearly on the 890 earphones, show up on the COM3 terminal pgm monitoring the PK232; they can be heard clearly by others when I transmit on the 736, and they cause gibberish to sho up on the terminal program monitoring the GPS. They also cause interferrence on the AEAFAX reception.
I have tried disconnecting lines at "a", "b", "c", and "d". Disconnecting at "a" eliminates the problem, but I need that connected. Disconnecting at either "b", "c", or "d" reduces the interferrence by about 1/2, but does not eliminate it. Removing the AEAFAX does not help, nor does bypassing the switch and eliminating the line to the GPS, nor does removing the line to the 736, when monitoring the problem at the earphones or at the GPS. Disconnecting the line from the pk232 to the 890 Earphone "Y" eliminates the problem at the earphones, but not at the other problem areas.
The 890, 1200 and pk232 share a common power supply (grounded), but the KPC3 and the GPS use a floating battery eliminator type power supplys, and the 736 is AC line powered. I originally had the 1200 running on batteries with little difference. I have tried running case grounds between the 1200 and the KPC-3, and also between the KPC3 and the common power supply ground, with no effect. I have had previous problems with the power circuitry in the 1200 and with the rs232 line drivers in the pk232, but everything seems to be working OK other than this problem now.
I had thought that I had some sort of a ground loop problem, but I am beginning to beleive that it is more serious. Any ideas where to start

looking for the problem. Basically every one of these devices work fine if they are the only thing connected, but when hooked up together I have problems. Note: the interferring packets are packets being received, not packets being transmitted.

Thanks in advance for any help.

Not much of a description here Craig, but if you haven't tried running
the power cables directly to the battery and putting a ferrite core on
them I would do that first. Be careful of running the power cables over
any control modules in wire harnesses where it could pickup noise
from the control modules. Moving the rig if you discover it is near a control
module will be beneficial also.

Good Luck.

The one thing I find so amusing about this thread is that all of the people who are arguing that $7/yr is too much are forgetting one simple thing: IT'S ONLY IF YOU WANT A VANITY CALLSIGN!!! If you don't want to pay $7/yr, FINE! Keep the callsign the FCC issued you and shut up. $7/yr to pick your own call is still a very reasonable amount of money, and if you don't want to pay it, you don't have to.

DXAC Announces Vote Results

The ARRL DXAC (DX Advisory Committee) voted 15 to 1 against reinstatement of (deleted) Aldabra to the DXCC Countries List. The DXAC decided that Aldabra does not meet the criteria of the present rules.

In another ballot, the DXAC voted to approve call area calling guidelines. (There were 11 yes and 2 no votes with 3 abstains.) The DXAC guidelines call on DX stations to operate in a manner perceived to be fair and balanced to all areas, and to work portable stations in the specific call area they are listening for.

>service now?

Of course, I'm one to strongly remind other amateurs that one of our
purposes, as chartered by the FCC, is to advance the state of the radio art.
Certainly, loading more yak boxes onto 440, or any of the other popular
VHF/UHF bands, is not necessarily going to do anything positive for the
radio art.

The issue has been raised that point-point, fixed-location uses, such as
packet forwarding and auxiliary station links, ought to be moving into the
microwave spectrum. I completely agree with this. At the same time, I'd
be delighted if we could make the microwave spectrum of more general use.

Nonetheless, it is important to remember that not all spectrum is equivalent.
To suggest that 440Mhz shouldn't be crowded because there are hundreds of
MHz of amateur allocations on higher frequencies is to ignore reality. If
the FCC tomorrow declared that the 20m band was being re-allocated to non-amateur
use and we were getting 400KHz of replacement spectrum allocated as amateur-only
at 902MHz. Would this be fair replacement?

My original point was, and is, simply that not all spectrum is the same.

3965. IPS Daily Report - 14 June 94

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-14 23:09:33 UTC
From: rwc@flare.syd.ips.oz.au
Message-ID: <1994Jun14.230933.5026@ips.oz.au>
Source record: 265224
Cross-posted to: aus.radio,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 14/2330Z JUNE 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 14 JUNE AND FORECAST UP TO 17 JUNE

No warning is current.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 085/027

1B. SOLAR FORECAST
15 June 16 June 17 June
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 085/027

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled

Estimated Indices : A K Observed A Index 13 June
Learmonth 14 3333 3332
Fredericksburg 12 12
Planetary 15 11

Observed Kp for 13 June: 3223 2333

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
15 Jun 12 Unsettled.
16 Jun 16 Unsettled to active.
17 Jun 16 Unsettled to active.

2C. MAGNETIC COMMENT
Slight increase in activity is expected June 16-17 due to
dissappearing solar filament.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
14 Jun normal normal-fair fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
15 Jun normal normal-fair fair
16 Jun normal fair fair
17 Jun normal fair fair
3C. GLOBAL HF PROPAGATION COMMENT
Degraded HF comms conditions may be experienced June 16-17.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T index for 14 June: 44

Predicted Monthly T Index for June is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
15 Jun 40 Near predicted monthly values.
16 Jun 30 Near predicted monthly values.
17 Jun 30 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Spread F observed at times during local night. Degraded
conditions may be experienced during June 16-17.

Hi,

I am in the process of planning to take the "Ham Radio Exam" but I
am not sure which level I want to try. What I am looking for is to
find study materials, old exams, course materials, etc. on the internet.
Since I live in Canada, I need materials that apply to the jurisdiction of
Ontario and to this country. Can anyone suggest an online
source for the materials of which I listed above?

Thanks in advance and looking forward to your responses.

Language is dynamic, not static. 73's (the plural of 73, by many official accounts) means "Best Wishes". It didn't used to, but it does now.

Therefore, 73 means "best wish". So, if you say 73, you are only wishing the listener one wish. OK, it's your best one, but it's still only one. If you want to be more ebulliant, use 73's. (Or you can try 146, 219, or any of the other muliples of 73 to give a fixed number of wishes.)

Ed Ellers (edellers@delphi.com) wrote:
: Jeffrey Herman <jherman@uhunix.uhcc.Hawaii.Edu> writes:
:
: >Wow! No need to whine about 440 when we've got all THIS available.

All I hear on 440 is a little alternator whine ;)

: Are FM transceivers for those bands as readily available as those for 440?

Tranceivers are available for the 2.4 GHz band. For some unknown reason
they are not marketed in the usa. There are over a hundred 2.4 GHz
repeaters in Japan. Get your friend to bring one back from Japan.

I bet if dual-banders came with 2meters and 2.4 GHz there would be a lot
of 2.4 repeaters in southern california. The band does work quite well
for mobile applications. Within five years you will see a lot of 1.9 GHz
radios marketed to the public as portable phones and computer rf links to
the Internet. The commercial radio manufacturers would love to see us
fighting over ten Megs of 440 spectrum while they get ten times that from
us at 2.4 GHz....

: Is "homebrewing" as practical on those bands as on 440 -- referring to
: special construction techniques as well as availability of components that can
: operate at those higher frequencies?

RTFM :) there are many amateur construction articals and the ARRL as well
as the British microwave publications.

: Are propagation characteristics on those bands such that they are as suitable
: for FM voice communication as is 440?

Why limit your self to just fm voice ... try wide band video or high
speed digital lans all requiring the high bandwith that is not available
on the lower bands. Lots more opertunity to have fun doing something that
can't be done with a 2meter dual-bander.

3975. FM not working in car radio

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-15 02:54:35 UTC
From: ehle@leland.Stanford.EDU
Message-ID: <2tlqhb$dhv@nntp2.Stanford.EDU>
Source record: 265030
Cross-posted to: rec.autos.misc,rec.autos.tech,rec.radio.amateur.misc

I'm a complete non-radio, non-car person but have a frustrating problem with the radio in my '91 VW Jetta:

The FM stations fade out as the temperature cools off. First thing in the morning, I get no FM at all. AM's fine. After the car's been sitting in the sun all day, the FM comes back. If it's been a cool day, or the car's been in the shade, the signal is weak.

Can anyone tell me what's wrong and how much it's going to cost. I read none of the newsgroups I'm posting to, so I'd appreciate responses directly to my e-mail. Many thanks.

Hmm. If how much we pay an agency determines how responsive they are,
we each should have our very own little IRS agent as our personal slaves....

>Remember: The amateur service is a big sink to the FCC ... we provide
>nothing of significant value any more, and we're sitting on hundreds
>of megahertz of valuable bandwidth.

>How many licensed hams are there in the US now? 200,000 maybe? At $7
>per ham per year, we're paying merely $1,400,000 p.a. rent on a LOT of
>real estate...

Whoa, Batman. This presumes the FCC has some sort of title to the radio
spectrum to dole out to the highest bidder. Funny, I can't find any
constitutional authority for that. In the FCC's charter to regulate
the spectrum, it could make a case that the greatest good is for the
amateur frequencies to be used elsewhere but they certainly can't make
a case for selling the frequencies. That they now do so is a
testament to apathetic the population has become.

>P.S. This really kinda goes against my nature -- I'm usually a rabid
>libertarian.

Boy, you dropped it on this one.

Best guess based on what little you've told me.

You have a windsheild antenna. It has a break in it. As the windshied
warms up, the break is bridged and the signal magically appears. The
cost to repear this is either a simple reseating of the connection
point at the base (usually) of the windshield or could go as far as
having to replace the entire windshield assembly.

But it definately sounds like a temperature (i.e. expand/contract)
related problem.

Please let me know what you find out. I like to know when I guess correctly!

In article <hk1NH1l.edellers@delphi.com> Ed Ellers <edellers@delphi.com> writes:
>
>Are FM transceivers for those bands as readily available as those for 440?

No. But you know by now that I would always encourage someone to build
rather than buy. ``Keep the soldering iron hot and the fingers cool.''

>Is "homebrewing" as practical on those bands as on 440 -- referring to
>special construction techniques as well as availability of components that can
>operate at those higher frequencies?

I see lots of construction articles in the magazines and books; my '91 Hand-
book has a chapter devoted to `UHF and Microwave Equipment', and I believe
the ARRL has entire books devoted to these subjects. Possibly critical
componenets can be gotten from the surplus market. I read that construction
techniques are quite different `up there' than what we're used to on the
lower bands (i.e. 2M). I've heard that it helps to know voo-doo...

>Are propagation characteristics on those bands such that they are as suitable
>for FM voice communication as is 440?

Good question. I'm curious as to what 420-450 characteristics are lost at
the higher frequencies. Why wouldn't they be suitable replacements for
VHF? I imagine there's more shadows in high building density areas; less
refraction, more reflection. Radio waves start behaving more like light.
I'm hoping someone will point out the critical differences.

Jeff NH6IL
(when it comes to building, 10M is UHF to me...)

>
>How about the entire GPS system? How about the INMARSAT system? How
>about all the satellite links on shipboard? How about all that military
>stuff they don't want you to know about?

All direct line of sight paths, and the amateur satellites all use 70 cm
for up or down links so current satellites aren't of much help in releaving
70 cm of activity.

>Some enterprising amateurs have indeed operated mobile above 1300MHz. I
>personally operated mobile-in-motion full-color ATV on 5.8 GHz. Remember,
>it wasn't too long ago that the common belief was that mobile operation
>above 500 MHz wasn't feasible. If that barrier hadn't been broken, there
>would be no cellular service!

Cellular is also short range line of sight, or near line of sight
usage. Cellsites on average serve a 3 mile radius. At 800 MHz,
it's more high UHF than microwave in it's propagation characteristics
as well.

>As an alternative (and less innovative),
>one could always take the point-to-point stuff out of the current
>mobile-friendly bands. This would make more room for the current mobile
>technology and put point-to-point stuff on frequencies which are more
>suited to it.

This is a good idea. High gain directional antennas can compensate for
the greater path loss of microwaves in many cases, so beyond horizon
communications over point to point paths under normal propagation
conditions are still possible. Many links, especially packet backbones,
are over paths of 90 miles or more due to the sparse nature of the
network. That's tougher, except between mountaintops, at microwave.
Path lengths under 50 miles, however, only require modest towers of
100-200 feet to be workable. If the FCC acts favorably on the ARRL
petition for 219 MHz, most longer packet links can be moved there.
Getting ATV off of the 420-430 segment would also open up more room
for mobile FM voice activity. There's little reason microwaves can't
be used for most ATV activity, and besides, FM video works better than
AM.

However, building microwave equipment isn't that hard today. The
parts needed are available, and not very expensive. The building
techniques are different, but not difficult to master. The savior
is high gain directional antennas. They're relatively easy to build,
and make up to a large extent for the difficulty in obtaining high
RF power levels at microwave. Microwave is a valid substitute for
UHF over many point to point links. Video quality terrestrial links
are possible out to 50 miles with 1 watt signals in many cases.

Handhelds, or mobile in motion? That's the purpose served by VHF/UHF
repeaters, supporting handheld and mobile in motion stations. Microwave
almost demands high gain directional arrays. They're small enough in
many cases to be carried by vehicle, witness broadcast ENG vehicles,
but they aren't suitable for mobile in motion work. Unless the distance
is really short and true line of sight, omni-directional microwave
stations aren't very effective.

And indeed some amateurs *are* using the microwave bands, and more should,
but it isn't valid replacement spectrum for mobile in motion and handheld
use. Many fixed point to point links can be moved to microwave fairly
easily, and should be to free up spectrum better suited for mobile in
motion uses.

>>Wow! No need to whine about 440 when we've got all THIS available.
>
>Are FM transceivers for those bands as readily available as those for 440?

No, but then neither were they widely available for 2 meters or 70 cm
a few years ago. Open systems can, however, encourage enough interest
and activity to make it worthwhile for commercial manufacturers to
produce equipment. That's how 2 meters took off, activity reached a
critical mass to support a market. The same open systems approach
encouraged enough activity, except in Southern California and a few
other closed minded locations, to get dual band radios off the ground.

>Is "homebrewing" as practical on those bands as on 440 -- referring to
>special construction techniques as well as availability of components that can
>operate at those higher frequencies?

Yes homebrewing is practical. The techniques are *different* but not
harder. Parts are available, some as close as your microwave oven.

>Are propagation characteristics on those bands such that they are as suitable
>for FM voice communication as is 440?

Here's where it gets interesting. Because of the different path loss
characteristics of microwave, you need either direct line of sight
or high gain directional antennas to make paths usable in the absence
of unusual propagation conditions. At least through 2.3 GHz, cellular
techniques can be used to keep the paths required for omni handhelds
and mobiles in motion reasonable. Fixed path links can use large arrays
to make longer paths functional in the absence of severe terrain blockage.

Cellular should come to metro amateur operations. It's spectrally
efficient. However, it does require many more fixed sites than
conventional VHF/UHF repeaters, and quite a bit of fairly sophisticated
linking equipment. That's not beyond amateur means, but the increased
degree of cooperation required to install, maintain, and operate such
systems may be, as witness this thread on closed systems. The expense
of cellular systems dictates that there only be one or two per metro
area. Several closed systems wouldn't be supportable. To be viable,
the systems would have to be open to all amateurs, and to some degree
supported by all amateurs, if only by building a large enough market
for commercially produced equipment. Cellular is also not as suitable
in areas of sparse amateur population. There aren't enough resources
available in most rural areas to support the required number of sites.

Fixed point to point microwave links, however, can be used in many cases instead of VHF/UHF. Most 30 mile and less paths can be moved to microwave fairly easily. Only on extremely long paths is the VHF spectrum still better because of the need for fewer relay sites. Such is the case for spanning long rural paths between cities. For packet, spectrum at 219 MHz may be coming available for that purpose.

>$7/yr, FINE! Keep the callsign the FCC issued you and shut up. $7/yr to
>pick your own call is still a very reasonable amount of money, and if you
>don't want to pay it, you don't have to.

Today you don't have to pay it, but as witness the VHF Marine situation, this "reasonable" fee is only the foot in the door to higher taxes in the future. If people had known that the "reasonable" Federal Income Tax would grow to the income grabbing monster it's become back when the income tax was imposed, they would have screamed too. At it's beginning, the FIT was only 2% and only affected people with incomes over $10,000 a year, which was only well off people back then.

3990. Ham Radio Costs at FCC

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-15 10:54:25 UTC
From: rc@itchy.ncsl.NIst.GOV

Gary Coffman wrote:
> We're *not* a big sink to the FCC. They spend on average 8 manhours a
> week on the amateur service. It's the cheapest to administer service
> that they regulate.

Let's get a few things straight ! Entering the ham license info into
the computer at Gettysburg may only require 8 staff hours a week (probably
not a man). BUT......
1) Who buys the paper / pays the postage / etc. ? Who DONATED their
new computer ? Is there a supervisor ?
2) Do the FCC/Washington people like W3BE and secretary and maybe
an assistant DONATE their time? I thought they were paid. Someone
has to handle the rulemaking petitions and other harassment from
the hams at large. Or maybe you want this activity delegated to
the ARRL...who would doubtless do it for free (NOT!) ;-)
3) Do the government people who go to the international allocations
meetings and fend off a certain number of threats to the bands DONATE
their time?
4) Etc.
Thinking that amateur radio costs the taxpayer no more than the salary of
one nice lady who types in the license info one day a week is like thinking
that the only cost in a broadcasting station is the on-air people. You DO
work for free, don't you Gary ?

The following is a list of informational files for this newsgroup
available via anonymous FTP from ftp.cs.buffalo.edu or the Australia/
Asian-Pacific mirror at grivel.une.edu.au.

Questions to bowen@cs.buffalo.edu

1750m.band - misc info on the 1750m band
222xvtr.zip - PostScript code for KH6CP no-tune 222-MHz transverter
8085sys.zip - 8085 system software, from QEX 11/93 and 12/93
alinco_180t_mod - Alinco 180T modification for a TNC connection
ampr_coordinators - coordinators for packet IP addresses
antenna_refs - references for articles about antenna designs
antique_radio_info - misc info about antique radio collecting
arrl-logo.ps - ARRL logo in PostScript format
arrl_bib - bibliographies from ARRL literature (ASCII format)
arrl_digital_minutes - Minutes of the ARRL committee on digital comm.
arrl_fo_jobs - descriptions of some ARRL Field Organization jobs
arrl_info_service - announcement of the ARRLs trial information service
bbs_interface_specs - specifications for message passing protocol
cal_pd_freq - California police frequencies
callbook.tar.Z - sources for the Buffalo callsign server v1.3
canadian.Z - Canadian ham database in FCC format
carpet.loop.2 - Antenna for apartments and small spaces
clubcalls.Z - database of US ham clubs
comb6.zip - HF Propagation Predication program
docket_91-36 - information regarding the proposed scanner regs
dxcc-k2di - ARRL DXCC country list
dx_w2iol.dat - data for all country prefix, position, etc
dx_w2iol.doc - documentation for the above database
element_credit - rules about VE credit for earliers exams
elmers_admin - information about the elmers list (see below)
elmers_index - quick reference index of elmers
elmers_list - list of elmers on the network
exam_ops - info on exams and exam opportunities
faq_callsign - frequently asked questions about the callsign server
faq_ham_1 - frequently asked questions about ham radio (pts 1)
faq_ham_2 - frequently asked questions about ham radio (pts 2)
faq_ham_3 - frequently asked questions about ham radio (pts 3)
faq_packet - frequently asked questions about packet radio
faq_satellite - frequently asked questions about satellites
faq_shortwave - frequently asked questions about shortwave

Changes: new mailing lists, .packet rmgroup, and .policy updates

(Note: The following is reprinted with the permission of the author.)

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info,
and rec.radio.swap newsgroups. It is intended to serve as a guide for the new
reader on what to find where. Questions and comments may be directed to the
author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@oac.hsc.uth.tmc.edu. This message was last changed on 18 September
1993 to add the mailing lists for the new rec.radio.amateur newsgroups, to
note the rmgroup of rec.radio.amateur.packet, and to officially retire some
(in)famous threads of discussion on rec.radio.amateur.policy.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

As the net grew, and as packet radio came into vogue, packet discussion began
to dominate other topics in the group and on the list. This resulted in the
logical solution: a group was created to hold the packet discussion, and
another corresponding mailing list was created as well: net.ham-radio.packet
and PACKET-RADIO, respectively.

These two groups served for several years, and went through Usenet's Great
Renaming essentially unchanged, moving from net.ham-radio[.packet] to
rec.ham-radio[.packet]. Readership and volume grew with the rest of the
network.

The INFO-HAMS mailing list was originally run from a US Army computer at
White Sands Missile Range, SIMTEL20. There were few problems with this
arrangement, but one was that the system was not supposed to be used for
commercial purposes. Since one of hams' favorite pastimes is swapping
gear, it was natural for hams to post messages about equipment for sale
to INFO-HAMS/rec.ham-radio. This ran afoul of SIMTEL20's no-commercial-use
restriction, and after some argument, a group was created specifically
```

for messages like that: rec.ham-radio.swap. This group wasn't gatewayed to a mailing list, thus avoiding problems.

While all this was happening, other folks wanted to discuss other aspects of the world of radio than the personal communications services. Those folks created the rec.radio.shortwave and rec.radio.noncomm newsgroups, and established the precedent of the rec.radio.* hierarchy, which in turn reflected Usenet's overall trend toward a hierarchical name structure.

The debate between proponents of a no-code ham radio license and its opponents grew fierce and voluminous in late 1989 and 1990. Eventually, both sides grew weary of the debate, and those who had not been involved even more so. A proposal for a newsgroup dedicated to licensing issues failed. A later proposal was made for a group that would cover the many recurring legal issues discussions. During discussion of the latter proposal, it became clear that it would be desirable to fit the ham radio groups under the rec.radio.* hierarchy. A full-blown reorganization was passed by Usenet voters in January 1991, leading to the overall structure we now use.

After the reorganization, more and more regular information postings began to appear, and were spread out across the various groups in rec.radio.*. Taking the successful example of the news.answers group, where informational postings from across the net are sent, the group rec.radio.info was created in December, 1992, with Mark Salyzyn, VE6MGS, initially serving as moderator.

In January, 1993, many users started complaining about the volume in rec.radio.amateur.misc. This led to a discussion about a second reorganization, which sparked the creation of a mailing list by Ian Kluft, KD6EUI. This list, which was eventually joined by many of the most prolific posters to the ham radio groups, came up with a proposal to add 11 groups to the rec.radio.amateur hierarchy in April 1993. The subsequent vote, held in May and early June, approved the creation of five groups: rec.radio.amateur.digital.misc (to replace .packet), .equipment, .homebrew, .antenna, and .space.

The Current Groups

I can hear you asking, "OK, so this is all neat history, but what does it have to do with me now?" The answer is that the history of each group has a direct bearing on what the group is used for, and what's considered appropriate where.

The easy one is rec.radio.amateur.misc. It is what rec.ham-radio was renamed to during the reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize

this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, should be removed by September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is now rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there.

The first reorganization added two groups to the list, one of which is rec.radio.amateur.policy. This group was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The other added group is rec.radio.cb. This is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently Mark Salyzyn, VE6MGS. The email address for submissions to the group is rec-radio-info@ve6mgs.ampr.ab.ca. Inquires and other administrivia should be directed to rec-radio-request@ve6mgs.ampr.ab.ca. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas,

commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

A Few Words on Crossposting
===========================

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

In article <rogjdCr6MJJ.MEA@netcom.com> rogjd@netcom.com (Roger Buffington) writes:
>
>As you probably noted elsewhere on this thread, the ARRL has done quite a
>bit to bring about faster licensing.

So the wait period (someone noted 16 weeks) is acceptable, then? Sorry, but absurd is absurd is absurd. And 16 weeks is absurd. Especially when we note that the actual work the FCC does takes about 30 seconds. Tops.

No, the FCC proposed a solution, instant licensing, which would allow them to do their thing without impacting people waiting to get on the air, and that great representative of Amateurs everywhere, the ARRL, shot it down. I suspect that even the old 'we took a survey and found that the will of the amateur community...' excuse won't even be available to be dragged out here. I can't imagine a ham who would check the 'NO' box on a question of 'Would you like to see immediate licensing and issuance of call signs for aspiring hams who pass a VEC session?'

> The comparison between the DMV and
>the FCC is not a valid one, in my opinion. The DMV licenses people to do
>something that many of us **must** do in order to make a living: drive a
>car. Ham radio is just a hobby, and FCC has made it clear that we are
>far from its highest priority.

Or is ham radio an exercise of right of use of a public facility? It is the FCC's requirement that one get a license to do what one is otherwise capable of doing. The comparison is valid. Citizens pay for service, and cede a certain amount of restriction on their activities in return for an orderly society. In doing so, they have a right to expect to go about their business, including that of calling 'CQ' on 7.125Mhz if that be their wish and their qualification, as they will. A system where the paperwork sitting in a pile for 15 weeks is an undue infringment.

And while we're talking about 'priorities,' that great excuse for not finishing ones job, all of it, instant licensing makes prioritization far easier, as it lessens the impact on the licensee. There is no clear reason why the right of the amateur radio operator, as a spectrum user, should be eclipsed by a business or any other citizen user, in any case.

Finally, without all the pressures associated witht the back-log, and with a more efficient system, it might actually cost LESS to perform the licensing function. After all, someone has to schlep the piles of back-logged 610s from here to there, store all of them, keep them in order, and dig through them when someone's Congressman calls.

The FCC proposed a way out.

The ARRL got up to it's old back-up, 'Members Only' behavior, and stomped it down.

Oh, well. I guess that those newbies who get the ARRL hype about how 'We Represent You' in the midst of their long wait for licensing, and find out that the League was instrumental in keeping them waiting to get on the air will file the material with the rest of the junk mail.

Who could blame them?

'While you're in the interminable line, a message fromt the bureaucrat who keeps the lines long...'

Like a lead fucking baloon.

Greg

Surprised me too. I figured the league would support it.

|> I can't imagine a ham who would check the 'NO'
|> box on a question of 'Would you like to see immediate licensing and
|> issuance of call signs for aspiring hams who pass a VEC session?'

You haven't read this newsgroup all that much then. This issue was
hotly debated several months ago. Many hams are against this proposal
because of the abuse it can generate.

|> A system
|> where the paperwork sitting in a pile for 15 weeks is an undue infringment.

What next? Requiring a test is undue infringement?

|> The FCC proposed a way out.
|>
|> The ARRL got up to it's old back-up, 'Members Only' behavior, and
|> stomped it down.

Actually, the League proposed electronic filing, where the VECs would
submit applications electronically to the FCC, and all the FCC had to
do is print off the licenses.

|> Oh, well. I guess that those newbies who get the ARRL hype about
|> how 'We Represent You' in the midst of their long wait for licensing,
|> and find out that the League was instrumental in keeping them waiting

|>
|> Who could blame them?

Remember the basic tenent of the League: We do what is best for the League,
not necessarily what is best for amateur radio.

Sometimes those two ends do, however, coincide.

Jay Maynard (jmaynard@nyx10.cs.du.edu) wrote:

: That's just the hams of Texas as a whole, with the Texas VHF-FM Society. That
: doesn't include quite a bit of service locally with various repeater clubs.
: Even so, I'll buy that you've been around the service, and serving ham radio
: as a whole, for quite a while. Your uninformed arguments led me to believe
: otherwise.

Another snotty comment Jay. Your trademark, I see.

: >I've found that people who blow a lot of stack gas about how much they do
: >for the hobby, how long they've been in it (as though that somehow means
: >they are better ops than some of the FB newcomers to our hobby) usually
: >are mostly hot air. Your puffed up rhetoric is a prime example of this
: >sort of braggadacio. The rest of us are not impressed.

: I can't control that...but the fact remains that I speak about the
: practicalities of coordination from personal experience. Do you?

Yep. You just don't accept my arguments, which is your business. But it
would give your arguments more credibility if you stuck to proposing them
and refrained from personal attacks on your opponents.

: >Mostly on this thread you've alternated between name calling, attacking
: >other people's dedication to the hobby, and then whining about all the
: >money you've put into the hobby, all the service, etc. Stop whining!
: >It's a hobby!

: I can throw that one right back at those who whine about not being able to
: put up an open repeater on 440. Quit whining! Pick another band!

Well, Jay, once again, there you go. If your unspoken premise that
everyone who doesn't agree with you ought to get the heck off of 440
weren't so arrogant, it would be comic.

There's nothing comic about the name calling in which you engage, however.

: >Well, that's your privilege. It's mine, along with a lot of other
: >people, to disagree with you.

: I don't argue that. Everyone has the right to be wrong. :-)
: When you start advocating that coordinators do patently stupid things that
: will get them sued into oblivion, though, I have to stand up and yell, "HELL
: NO!"

Cites Jay. Cite the cases. I don't think you know jack about the law or
suing, etc. Another silly argument that you have advanced repeatedly in
this thread is essentially that anyone who changes coordination on an

existing repeater is going to be sued and run into the ground financially.
That's drivel. That's just not how the legal system works, and once
again, if your tone weren't so arrogant your argument would be comic.

: >We probably wouldn't disagree if the situation here weren't so out of
: >hand. I personally would entertain having a number of closed repeaters if
: >the reason could be justify and the number was limited so as not to crowd
: >out the possibility of large number of open repeaters. Operating a
: >repeater, like operating any other station, is a ***privilege**** not a
: >right. Do closed repeaters have a place? Perhaps. But not to the
: >exclusion of all others as is presently the case here in Southern
: >California. That was the topic of this thread, Jay. All of your whining
: >about how this point of view would take away your repeater and
: >how it fails to take into account your wonderful 10 years of service to
: >the hobby, etc. etc. is simply off the topic.

: No, it's right on topic. Operaring a repeater is a privilege that can only be
: revoked by the FCC. As a coordinator, I can't tell you not to put up a
: repeater.

See, now this remark is just intended to cloud the issue. Your muddy
thinking is funny. First you tell me that I shouldn't complain that no
one **Can** put up open repeaters on 440, then you say that no one can
stop anyone from doing it.

: There's simply no way to outlaw, or restrict, closed repeaters in a way that
: won't get coordinators sued. There's certainly no way to _remove_ existing
: closed repeaters.

Another irrelevancy! Who ever said that closed repeaters ought to be
removed*????? No one on this thread! What has been brought forth
as a suggestion is that coordinators have a responsibility to see that
their coordination policies serve not just a select group of existing
repeater owners, but rather the amateur community as a whole. An entire
band of private and closed repeaters, arguably, flunks this test.

The thread, btw, is about Southern California. Your comments illustrate
a gross level of ignorance of how things are out here.

: My experience with the coordination process gives me the real-world experience
: to back up my statements. As such, it's relevant.

: >Jay, believe it or not, some of us like to conduct a discussion without
: >name-calling and putting the other fellow down. Your approach of
: >attacking your opponent rather than his argument belies your oft-repeated
: >claim of how much service to the hobby you've put in. In radio clubs and
: >in real life few people want to work with or be around people who behave
: >in this fashion.

: Fine. Let me know when you want to conduct a discussion in that fashion.
: You're certainly not doing it now. In the meantime, I'll simply point out that
: there are others in this group - and in this discussion - that can back up my
: word.

: >Since we've established that I've been in amateur radio a heck of a lot
: >longer than you, the first part of the above paragraph is exposed as being
: >wrong (as well as snotty). As for your condescending, unpleasent diatribe
: >about the complexity, well, thank you for the insight. But please,
: >concision.

: I'll concede the issue of how long you've been in ham radio. That makes it all
: the more surprising that you still believe it's a black-and-white issue; the
: longer I'm involved with it, the more complex it gets. I'm being as concise as
: I can while still arguing the whole issue.

Sorry Jay, but you're way off base. You are the one who has consistently advanced red herring arguments and attributed various, non-existent arguments to others on this thread. Like the suing argument, which you have not backed up with any facts.

Since you've been in amateur radio so very long, Jay, let's have a list of those cases which you claim exist if repeater owners suing coordinating bodies. I'm betting its hot air. Cites please.

4005. IMMEDIATE LICENSING? Bad implementation. Good idea.

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-15 13:33:50 UTC
From: ham@wam.umd.edu
Message-ID: <2tmvvu$1ql@cville-srv.wam.umd.edu>
Source record: 265050

Immediate licensing was an EXCELLENT idea. I believe that nearly EVERY ham on the air would have agreed with this. The VE's giving the exam should have been allowed to call the FCC computer, use a modem, and enter the data directly into the FCC database, at which point a call-sign would have been spit out. Ideally, THIS is the way it should be.

The system that was proposed? People just passing their exams would be assigned a call that consisted of "WZ" plus the call district plus their first, middle, and last initials, plus a license class identifier. Find the problems here...

No records on file at the FCC. How do you track someone causing interference or operating illegally? YOU DON'T.

What's to keep a non-ham from "inventing" his own call for a while? Why would ANYONE get suspicious with WZ3SRR/T on the air? Not only would there be no problem for someone doing this, but there would also be no REASON to suspect the person. Why would the person stop xmitting, either? After a time, just change the callsign, and again, nobody would ever suspect a thing. No records, no control.

How about two people with the initials JTS, one for John T. Smith of Florida and one for James T. Sutter of Virginia. Say they both passed their exams for Technician class, and were awarded WZ4JTS/T. TWO people with the same callsign. Go and figure THAT one out.

A good idea, terrible implementation.

4009. K8EFS ????

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-15 14:05:36 UTC
From: besten@faculty.chem.ruu.nl
Message-ID: <besten.771689136@faculty.chem.ruu.nl>
Source record: 265062

Is there anyone out here who can give me some info on K8EFS.
Is he still alive? Is his computer with logs still 'broke'.

You get the meaning. I'm trying to get cards from him but
still nothing. I tried to phone him but he has a secret number (and I
can guess why (!)).

Is he still valid as QSL manager?

Perhaps anyone can tell me how to obtain a card from 9K2ZR (period june '92)
and V51E (july '90).

It concerns 50 MHz QSO's which must be confirmed for me to apply for my DXCC
on 50 MHz.....

Thanks,

Remco, PA3FYM

>So the wait period (someone noted 16 weeks) is acceptable, then? Sorry,
>but absurd is absurd is absurd. And 16 weeks is absurd. Especially when
>we note that the actual work the FCC does takes about 30 seconds. Tops.

Here: get a filled out 610 and sit at your terminal. Now, type all that
info in. Did it take you 30 seconds? If yes, then I suggest you apply
for the job at Gettysburg.

>No, the FCC proposed a solution, instant licensing, which would allow
>them to do their thing without impacting people waiting to get on the
>air, and that great representative of Amateurs everywhere, the ARRL,
>shot it down. I suspect that even the old 'we took a survey and found

No, no, no. The League shot down a proposal that would have allowed
anyone to purchase a 2m HT from the J.C. Whitney catalog and get on the
air immediately without any bothersome studying or exams.

In a still-somewhat-rural area like NW Arkansas the FCC's proposal would
work since everyone knows who the VEs are and vice versa. Pirates (with
legitimate-sounding calls) would be caught almost immediately. Can you
imagine how many NYC cabs would have 2m HTs if the FCC's plan were
implemented? Enforcement, what little there is, is tough enough.

The real problem with the proposal, IMHO, is that it parallels what
happened in the Citizen's Radio Service in the '70s and '80s. First the
fee went from ~$20 to ~$4 to $0 as the backlog got bigger. Then the FCC
allowed self-assigned calls (K + initials + ZIP code, I think) for use
during the interminable wait, then finally just let the whole thing go.
And another fine radio service bites the dust ...

Do we really want to allow the FCC to drop the Amateur Radio Service
"ball" like they dropped the CB "ball"?? I think not. Congrats to the
ARRL for not allowing that to happen and for having an alternate proposal
ready (electronic VE filing).

4011. Tone encoder on Icom IC-2SA

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-15 14:24:36 UTC
From: Wayne_Estes@csg.mot.COM
Message-ID: <9406150924.ZM1532@SALCIUS2>
Source record: 265059

I recently bought an Icom IC-2SA and UT-51 tone encoder in Hong Kong.
The IC-2SA instruction manual does not describe how to program the encoder.

Does anyone out there in net-land know the following:

1. How to enable/disable the UT-51 tone encoder in an Icom IC-2SA?
2. How to program the tone frequency?
3. If a unique tone frequency can be stored in each channel memory?

Please respond to wayne@csg.mot.com

I Took my no code test march 16th, as of mail yesterday afternoon, no callsign.

I am unhappy to hear from poster that waiting time is now 16 weeks instead
of the previous 12.

I agree that "instant operating" could be abused. I think that the idea of
"vec" downloading info into the fcc front end computer would save the fcc
data entry work and speed things along.

I personally would be willing to spend $25-35 bucks to "expedite" my license
in 30 days rather than spend $5.75 or so and have to wait 4 months.

I have already spent over $275 bucks + traded some stuff for 2 2m ht's,
I would not mind that much spending $30 +/- inorder to use them before the
warranty expires!

The hobby loses its attraction when you are forced to wait that long for
somebody else to do some paperwork. If I had known that it would take
4 months from test date (not counting study time and time waiting for vec sched)
I probably would have found a different radio hobby, or picked up a modem and
subscription to compuserve - I do all my ham communicating via internet already.

Kein{nen Paul OH3LWR (k23690@proffa.cc.tut.fi) wrote:

: If you want similar omnidirectional (horisontal) coverage as with
: repeaters in lower bands, you need much more ERP. The radation pattern
: at the repeater site can be flattened to a few degrees, the mobile radiation
: pattern to maybe 10-30 degrees and the portable to 40-90 degrees to get some
: antenna gain. Beyond this, you have to use adaptive phased arrays and
: have to forget about round table operation.

In some areas, it may be possible to point the antennas at a common
reflector. Interestingly, one place where this supposedly works
is Southern California, where you have most of the population living
on one side of a mountain range.

This does make it difficult to use circular polarization, since the
reflection will change the sense. However, of the 6 stations I worked
on 5760 in the last June VHF contest, I'm pretty sure everyone was
running horizontally polarized horns or dishes.

A friend of mine just got a TS-50 this weekend and is having the identical problem in his Ford (don't know type). He has confirmed that is noise coming from the fuel pump. He pulled the fuse on the fuel pump and all noise went away. He says that Ford is aware of this problem and he heard that a special filter was available. But as of yesterday afternoon, the local dealerships said that they would "have to look into it" and played dump. I hope that helps narrow it down for you.

>work for free, don't you Gary ?

Bob, of course the FCC has general operating overhead, just like any organization, but those costs are mostly *fixed* across all the radio spectrum that they regulate. We have staff engineers, lawyers, and accountants whose costs are fixed regardless of what programs we run. They wouldn't cost more or less if the "program" were amateur radio or commercial land mobile. In the case of the FCC operations you outline above, I consider those costs to be the costs of regulating *any* public spectrum and as such should be charged, as they are, to the public at large via the general fund. The spectrum wouldn't be vacant if we weren't there, another "program" would fill the void and require staff services just the same. It's the *public* interest the FCC services, not ours, and it's the public who should, and do, bear the costs.

The FCC has said repeatedly that the amateur service requires the *least* amount of their staff time of any of the services they actively regulate, such as mass media or telcos or land mobile. They really do dedicate only 8 manhours a week specifically to amateur radio within the Private Radio Bureau. And all the paper, and paperwork, is at *their demand*, though admittedly the Incentive Licensing mess is mostly at ARRL demand. Perhaps

that *should* be charged to the ARRL.

Enforcement, what little there is, is spectrum wide, not specific to amateur radio. And international frequency conferences similarly address spectrum wide policy, not specifically amateur radio. The US has obligated itself to participate in these things by treaty *regardless* of the topic of negotiation. It's fixed overhead assignable to the general public interest in managing public spectrum. It's not an amateur radio specific expense.

Like with any other radio service, there are occasional dockets and filings dealing with amateur radio spectrum that they have to consider, but that takes no more staff or Commissioner time than it would if the spectrum were land mobile instead of amateur, in fact generally less since the Commission tends to rubber stamp ARRL proposals and reject others out of hand. The Commission has to deal with that spectrum *anyway* regardless of who occupies it, and deal with *citizen* filings regardless of whether they are licensees of a particular service or not, so no additional staff time is required over and above their statutory obligations to manage the public spectrum *in the public interest*.

Remember the FCC isn't doing anything *for* us, they're doing things *to* us that they consider in the *public* interest. It's *their* imposed requirements restricting *our* access to *our* public spectrum that generates their workload. We should actually demand that they pay *us* for the inconvienences they cause us.

Hi Mike,

I also thought about bying NiMHs for my HT (FT530), but then I heared, that they self discharge very quickly. So I looked for the best AA sized NiCd cells one can get and found Panasonic's 900mAh cells. The cost is about 2/3 the NiMH's and they work UFB! The only trick with them is that they don't have the usual knob at the + pole, so I had to modify the contacts of the battery case.

> Jeff NH6IL

Jeff, you'd better read the footnotes on those allocations (97.303 b thru q). I've added most, but I'm sure I missed or messed up a few in the ultra-fine print of Part 97. I'm still using the 1991 edition, since the GPO unfortunately has not yet shipped our orders (placed in November '93) for several copies of the 1993 printing.

These are NOT "Amateur Radio Bands" in the same sense as the lower frequencies. In general they are NOT allocated amateur worldwide or as primary use. The only amateur allocation at 222-225 MHz only happened because the hams made so much noise about the piracy of 220-222 for commercial interests, who now have lost interest in that segment completely.

The FCC just started granting PRIMARY licenses in the 902-928 MHz band to data and information services, so you can kiss it goodbye before 2001 rolls around.

>enter the data directly into the FCC database, at which point a call-
>sign would have been spit out. Ideally, THIS is the way it should be.

not all exam sites have a phone line available. i know a fair number of VEs that think me nuts for returning long distance calls when people call me up about the monthly exams we hold. we don't have a phone line available so at best i'd have to go someplace where a phone line is available or pay air time for a cell radiophone line plus ld charges. yes, the school has phones, but no, we don't have them available to us and they probably wouldn't let us make toll calls anyway.

another VE group's contact gets hyper over such things (even when he's not paying the bill...) and we've had "discussions" over why i shouldn't spend my 50 cents to call back someone who's going to make a 100 mile trip only to find out it's the wrong day or they forgot something or didn't know how to find the spot where the exams are given. I make him look bad, don'tcha know. I haven't told him about the volumes of fliers and information sheets that are sent to the various places around the county and amateur speciality stores that i do at my expense using professional quality tools and fonts i've actually licensed for my use at home..8) (what can i say? it's a good feeling when you can get a flier to be to the point as well as attractive ..) i don't think he knows about our use of IR headphones either...(koss jck-200's and HB-500s...much better than the radio shack dreck but the RS phone probably would be OK at home).

a better way would be to drop a limited number of calls to each VE team as requested but this runs afoul of those who sell out the service with exam fraud.

this problem will have to be solved as a "pull"...got the laser printer for licenses - next we have the "improved" 610 and new computers to use it. get those working and then the next stage will be EDI from the VEC's and once that's working then we might be able to experiment with EDI from the VE team to the VEC...

4036. RAIN Talk at ACB Conv, July 7

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-15 18:52:38 UTC
From: Hap Holly <Hap.Holly@f747.n115.z1.fidonet.org>
Message-ID: <771709958@f747.n115.z1>
Source record: 265020

As founder and producer of the Radio Amateur Information Network (RAIN) I have been invited to speak at the American Council of the Blind (ACB) convention, scheduled to be held July 2-9 in the Palmer House in downtown Chicago. My talk, "The Evolution of Amateur Information Services", will be given before the ACB Radio Amateurs, 1:30 PM, Thursday, July 7th. It will last about 30 minutes, and be followed by time for Q&A. It should be noted that I will NOT be compensated for my time.

If you plan to attend the week-long convention, bring your 2 meter handheld and program 147.48 MHz simplex into one of its memories. This is the recognized simplex frequency hams attending ACB conventions use to find each other. For those attendees interested in hearing nets carrying the RAIN Dialup during your stay, here is a list of them:

DAY TIME REPEATER FREQUENCY LOCATION
Sunday 7:00 PM Far Out II 224.78+ Park Ridge
8:00 PM ACLR 147.225+ (107.2 PL) Chicago
Tuesday 8:00 PM WAFAR 146.67+ (107.2 PL) Chicago
8:00 PM NSRC 147.345+/224.32- (107.2 PL) Winnetka
Wed. 8:00 PM AREA 147.135+ Markham.

I don't monitor any one 2-meter repeater but can be found on 146.415 MHz simplex. As I live in Des Plaines, some 30 miles northwest of the Palmer House, you'll need to find a northwesterly-facing window on an upper floor to contact me via simplex. If you have 220, you can find me on the 224.24 KA9REN Arlington HTS repeater. Otherwise, leave me a note in RAIN's voicemail, 708/518-6551.

For more information about the upcoming ACB convention, call the American Council of the Blind at 800/424-8666 afternoons.

Well it might be politically incorrect but it sure is correct. We don't
want to offend anyone now by trying to correct them. It's politically
correct to let people go on living in ignorance. That's smart.

4038. Fun with a PK88

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-15 19:10:56 UTC
From: levy@dcd00.fnal.gov
Message-ID: <1994Jun15.131056.1@dcd00.fnal.gov>
Source record: 265087

Here's a little story about a PK88. I bought it a few months ago. The manual stated (on page A-6, under the DAYtime command) that it was possible to install a Dallas SmartWatch, by removing the RAM chip at U5, inserting the SW, and plugging the RAM chip into the SW. No problem, I thought, and ordered the SW.

It shows up, and I go looking for U5. No U5, all the chips use the IC prefix. The schematic show the RAM chip as IC13. It's soldered in, and there's a heat sink right above it. So, I call AEA. They stopped socketing the RAM, but apparently forgot to remove that paragraph from the manual. The software support for the SW is still there, and I could install it if I really want to by desoldering the RAM, and taking a small hunk out of the heat sink to allow clearance. What the heck, it'll void my warranty, but I really want this thing to keep time accurately, and when it's off. So, I get the RAM chip out OK, solder in a socket, plug in the SW and the RAM, and everything's OK. Happy ending.

I'm just a little (really little) peeved at AEA for making it difficult to do something that should be easy, but for the cost of a socket, it's a pain. Also, if that paragraph hadn't been in the manual, I never would have started the whole thing to begin with. Other than that, it's been an pretty good unit. Lightning struck nearby a few weeks ago, and blew out the RS232 transmitter chip (75188), but fortunately, that *was* socketed...

Roger, every day on the news and in the newspapers I hear/read of many
frivolous lawsuits being filed for what seems to me very silly reasons.
Yet no matter how ridiculous the claim the defendent must spend his/her
own hard earnied money defending him/herself. I think we all see how
high emotions are running in this debate and Jay is correct in that
some hams will certainly file a lawsuit if they can't get their way.
It's a shame when volunteers, believing they are doing their job properly,
have to fear lawsuits in carrying out their duties.

This topic is getting boring.

Mobile in motion. Kent Britain, WA5VJB, has worked with systems up to at
least 10 GHz.

>Many fixed point to point links can be moved to microwave fairly
>easily, and should be to free up spectrum better suited for mobile in
>motion uses.

That's true too, although making a 95-mile path over flat terrain on 10 GHz
might get interesting...

>this "reasonable" fee is only the foot in the door to higher taxes in
>the future. If people had known that the "reasonable" Federal Income

I disagree. It hasn't been that long since there was a fee for
a ham license, with the fee varying by class. Renewals, address changes,
etc., were all subject to the fees. At worst, the FCC would simply be
reverting to a previous status, not creating some "new" fee. In any
case, I believe that Congress forced the issue of dropping the fees for
ham tickets; the same arguments against it still apply (go read some old
QSTs from the '60s and '70s for the full history).

The "vanity" callsign charge is quite reasonable, considering that
states charge considerably more for vanity license plates.....plus
there is the issue of additional processing time over and above normal
processing of license applications, so if there is no fee the FCC will
raise their budget and you get to help pay for *everybody's* vanity
callsigns through your Federal tax dollars.....whether you have one
or not!

: 10-30MHz world?

I've got one in my attic, and it works great as far as I can tell. I've only worked 10M, and if I can hear 'em I can work 'em. I've also got a 10M delta loop mounted outside, and unless the station I'm trying to work is at EXACTLY the right angle to the delta loop, the IsoLoop actually outperforms it by a couple of S units.

Tuning it can be a bit of a pain - but once you get used to it, it's not bad at all. I'm looking forward to getting it mounted outside later this year.

New FCC NPRM

FCC proposes automatic control for amateur HF digital communications.

In a notice of proposed rule making in PR Docket 94-59, adopted on June 13, 1994, the FCC has proposed amending the Amateur Service rules to authorize automatic control of stations transmitting a digital signal on the HF bands. The action had been requested in petitions filed by the ARRL and the American Digital Radio Society (ADRS).

In 1986, the FCC authorized automatic control of amateur stations transmitting digital communications on the VHF and higher frequency bands, and indicated that it was interested in authorizing such automatic control on the HF bands.

To determine solutions to the problem of interference from automatically controlled HF digital stations, the ARRL conducted a feasibility project under special temporary authority granted by the FCC to 50 amateur stations. The ARRL petition was based on the results of that study.

The FCC said that it was gratified by the cooperation and dedication of amateur organizations in determining the conditions necessary to allow automatic control of stations transmitting data and RTTY emission types on the HF bands. It agreed with the two petitioners that automatic control of amateur stations in the HF bands can, with safeguards, make the transmission of data and RTTY emission types both practical and effective.

Therefore, the FCC proposed to authorize automatic control for stations transmitting data and RTTY emission types on one specific

subband of each HF band where such emissions are authorized. It also proposed to authorize communication between a locally or remotely controlled station and an automatically controlled station on any frequency where data and RTTY emission types are otherwise authorized.

The text of the NPRM has not yet been released, and the comment deadline is unknown at this time.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 15/2330Z JUNE 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 15 JUNE AND FORECAST UP TO 18 JUNE

No IPS Disturbance Warning is current

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 088/032

1B. SOLAR FORECAST
16 June 17 June 18 June
Activity Low Low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 090/034

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 14 June
Learmonth 06 3222 1121
Fredericksburg 15 15
Planetary 15 14

Observed Kp for 14 June: 3333 3333

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
16 Jun 15 Quiet to unsettled.
17 Jun 15 Quiet to unsettled, with possible brief active periods.
18 Jun 15 Quiet to unsettled, with possible brief active periods.

2C. MAGNETIC COMMENT
Active periods may be observed during June 17-18 due to dissappearing
solar filament.
3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
15 Jun normal normal normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
16 Jun normal normal normal
17 Jun normal normal-fair fair
18 Jun normal normal-fair fair
3C. GLOBAL HF PROPAGATION COMMENT
Degraded HF comms conditions may be experienced June 17-18.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were 15 to 20% above predicted monthly values

Observed T index for 15 June: 51

Predicted Monthly T Index for June is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
16 Jun 40 Near predicted monthly values to 15% enhanced.
17 Jun 30 Near predicted monthly values.
18 Jun 30 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Spread F observed at times during local night. Degraded HF
comm may be experienced during June 17-18.

>73s de Stefan (DD6FM)

Ahh yes, a caveat to those thinking the same thing. The Panasonic
900 mAh cells use foam electrode technology. In short, this
means that the internal resistance of these cells is substantially
higher than we are accustomed to for NiCds.

What this means: During transmit, when you are drawing an amp,
the voltage supplied by the pack will be less than you expect
due to ohmic losses.

I have foam cells, and yes, they have great capacity, but they
do suffer from voltage drop during transmit, which means
that your TX power is lower than it should be.

Do an experiment if you have both the foam cells and an
original NiCd pack in good condition. During high power
transmit, note the DC voltage using the handy-dandy built
in voltmeter and note the voltage drop between Rx and Tx.
I think you will find that the drop is double with the foam

cells -- at least that is what I find with mine. Note
that part of the additional drop could be due to the fact that
the FBA12 uses spring contacts while the factory pack uses
welded terminals.

If this is a problem, Sanyo makes the KR-800AAE, 800 mAh
sintered plate cells, which have 12 mOhm internal impedance.
(I have no connection to Sanyo.)

Glad to hear that this worked for you though. I have been
using NiCds in the FBA12 for quite some time. At $50 for
a factory pack, and $5.00 for a set of 6 cheapo NiCds, you
can't lose.

-Ken

I am interested in information about Rayovac "Renewal" reusable alkaline batteries.

They look like a good deal, since the batteries themselves are similar in cost to ordinary alkalines, and unlike other rechargables have the full capacity of an alkaline battery , at least for the first few times the battery is reused.

Does anyone have experience with them or understand how they work? Is it possible to charge them yourselves, or are the specs for doing so being kept quiet by the manufacturer?

[878]

The following is a QST

The FCC says no to a proposal that would make Technician Plus license holders into instant Advanced class hams. Also, two California hams fail to appeal a state court order barring them from a repeater. This could open the legal door to run off other unwanted users of repeaters nationwide. These stories and more on Newsline report number 878 coming your way right now!

(*****
COMBO PETITION DENIED

The Amateur Radio Industry Group's Slow-Code proposal could be in for some rough sledding if the FCC keeps to its current position of denying any request to change the structure of ham radio licensing. It did so once again on May 13th when it flatly refused to consider a request from the Cass County Amateur Radio Club aimed at combining the Technician Plus, the Advanced General class licenses into one.
The Cass County group claimed that the majority of hams are dissatisfied with the current operator class arrangement. It wanted all three to be combined into a single license with full privileges.
But the FCC gave the Cass County petition the same traditional wave-off it has to every other request since it enacted no-code almost three years ago. It said that the matter has been looked into many times in the past and as far as the Commission is concerned, hams are very happy with the current five class system.

Therefore the petition is denied and no changes to the Part 97 licensing structure will take place in the foreseeable future.

(*****
SLOW-CODE

Word of the amateur radio industry group's plan to seek a relaxation of Morse code requirements for HF privileges continues to spread and hams have plenty to say about the proposal. At the recent BirmingHAMFest and Alabama ARRL State convention, radio amateurs expressed both opposition and support for the idea:

"I don't much care for it myself. Just personally the 13 wpm barrier is not that big of a barrier if someone wants to participate in hf and use those privileges. I don't think it is that much of an obstacle."

"I think it's a gimmick. If you can do 10 wpm you can do 13 wpm."

"Personally I think it would have an adverse impact. I'm kind od from the old school that if I had to learn it everybody else should. There is a purpose for it, the hf bands are crowded already. I think it might cause a problem."

"You can't condemn somebody cause maybe they're not quite as fast on code. Because they are not quite as adept at it. If it

opens it up to increase more communication, then I think it would be a benefit."

As we go to air the Amateur Radio Industry Group has not yet fled its slow-code proposal to the FCC, but that filing could happen at any time.

(*****
NO APPEAL

It appears as if an Orange County California Superior Court decision to issue a restraining that bars two hams from operation on an area repeater will stand. This is because Anthony Cardenas, WA6IGJ and Drew Feldman, N3KSO have failed to file an appeal to the order in the allotted time period.
As a result, the matter now becomes a part of California legal record and can be used as case precedent by attorneys for other repeater licensees who are trying to bar those deemed to be undesirable from operating on a given repeater.
In theory, the same case law could be applied to other disputes. These might include hams accused of harassing high frequency nets or packet bulletin boards that want to stop the postings of a specific board user to name only two.
Right now, the legal precedent developed in this case by Attorney Sid Radus, N6OMS is only applicable in California. However, repeater trustees in other states who are facing similar problems are expected to try the same legal method of removing unwanted users from their repeaters as well.

YOUNG HAM OF THE YEAR '94

Allison Daneen Zettwoch, KD4CKP is now officially the 1994 Westlink Report Young Ham of the year. Allison accepted the honor at the Sea Pack Convention in Seaside Oregon. We have this report.

"I recruit people that are very active and enjoy the hobby. They come and they help. They are not here to take it over, they want to help. Because I couldn't do it all by myself, I don't see how you all can. But I have found that I really enjoy the hobby. I like all the bands. I like cw and I like voice. I'm starting to enjoy packet as well. My father has said that is something I need to learn how to do. So I just want to thank everybody once again for all your hospitality and support. I couldn't have done it without you. Thank you." Allison Daneen Zettwoch, KD4CKP Westlink Report Young Ham of the Year '94.

Newsline joins with hams nationwide in congratulating 15 year old Allison Daneen Zettwoch, KD4CKP -- the 1994 Westlink Report Young Ham of the Year.

(*****
CUBAN-AMERICAN JOINT CONTEST OPERATION

For the first time in more than thirty-five years, a team of American ham radio operators has joined their Cuban counterparts in a joint international radiosporting effort. Traveling at the invitation of the Federation de Radioafficianados de Cuba, the United States team was lead by Joe Lynch, N6CL and included Lauren Libby, KX0O, Chip Margelli, K7JA and Janet Margelli, WA7WMB. The four American hams operated in the ARRL VHF QSO Party using special call signs CO0FRC for the primary operation and CO2OJ/R as the "rover" entry. Highlights of the operation included the first ever QSO's from Cuba on 222 MHz. and 1296 MHz. and a moonbounce contact with W5UN.

(*****
NEWSLINE UPDATE

Here is the latest on the financial crisis still facing Newsline. As you can tell, we are here once again this week, but keeping Newsline in operation is still day to day.
To help cut operating expenses even further, we are instituting several policy changes that are effective immediately.
First, we will no longer return telephone calls requesting information about the Newsline or what telephone lines service your area. Please put those requests in writing to our post office box address and include a self addressed stamped envelope. Information requests received without an S.A.S.E. will not be answered.
If you have a problem in accessing either of our California lines being inoperative you can call or fax us at our (805) 296-2407 office line. We will not call you back, but we will do our best to restore the service as quickly as we can.
On the other hand, if the problem concerns any line outside of California, do not call Newsline. We cannot help you. Please be advised that all lines outside of California are all run by independent volunteers and Newsline has no control over their operation. Calling us wastes your time and money. In fact, we are rarely even in direct contact with those operating outside delivery lines and cannot help you in any way.
Until further notice, the only telephone calls that Newsline will respond to are those dealing with news stories. If you send us a story by electronic mail, fax or leave it on our telephone service, we must have your telephone number so we can check out the facts. Stories that come to us without that information will be regarded as rumor and will be immediately discarded.
If we are able to survive the current fiscal crunch, Newsline is considering going to a bi-weekly service during July and August. The summer months is the time when little or no financial subsidy is available. We feel that going bi-weekly on alternate weeks from the publication of the three national ham radio Newsletters could carry us through the doldrums of the

summer months. No definite decision has been made on this. We will let you know when we do decide.
Finally, any radio club or ham convention requesting a Newsline speaker will be required to defray all expenses for that person. Simply said, we at Newsline no longer have the capital to do that.
We apologize to anyone inconvenienced by these policy changes, but they are necessary if Newsline is to survive and to remain a viable news and information service to ham radio that is essentially free.

(*****
GOLDWATER

The elder statesman of Amateur Radio is coming to a commercial radio station near you. U.S. Senator Barry M. Goldwater, K7UGA, has accepted an invitation to be Len Winkler's Ham Radio and More on Sunday afternoon, June the 26th. Winkler says that the show will be devoted to a discussion that everyone knows is close to Barry Goldwater's heart and you can also talk to K7UGA:

"On June 26th we have Senator Barry Goldwater, K7UGA. We're going to talk about ham radio. He loves to talk about ham. So he'll be on the national show. We are looking very much forward to it. The last time he was on, the lines were lit from the beginning of the show till the very end. Loves to talk about ham radio." Len Winkler, KB7LPW.

Winkler, whose call sign is KB7LPW says that anyone can tune in on Ham Radio and More if there is a Talk America station in your area:

"The show is on the Talk America Network which is on many local affiliates through the United States. It could be also heard on satellite via Spacenet 3, transponder 9, 6.8 audio. It airs every Sunday live at 6:00 pm Eastern time." Len Winkler, KB7LPW.

Again that's Barry Goldwater, K7UGA on Ham Radio and More on June 26th over the Talk America Network, nationwide.

(*****
Resolution gains majority

The Amateur Radio Service Joint Resolution 199, now has a majority of the US House of Representatives as cosponsors. The Resolution seeks formal recognition of the value of Amateur Radio to the country, would support Amateur Radio as "national policy," and would encourage rules and regulations to facilitate Amateur Radio as a public benefit by encouraging new technologies. Including Resolution sponsor Jim Cooper the total number of voting sponsors is now 218. There are currently 434 Representatives in the House.

(*****
TANDY EDUCATION

The Tandy Corporation has begun using information from the ARRL's entry level text Now You're Talking and from the ARRL Handbook to illustrate antenna fundamentals and schematic symbols. This, for use in its training certification program for store personnel. The Now You're Talking entry level study program is sold in Radio Shack outlets.

(*****
QST ON THE STANDS

Begging this July, QST Magazine will be available on news stands nationwide. According to the League, the only difference between the news stand and member versions of QST will be the magazines cover. The news stand version will have a significantly different look and will include teasers for the stories inside. The traditional version of QST will still be sold by radio stories and parts suppliers as well.

(*****
VHF CONFERENCE

The Central States VHF Society's annual conference will be held July 28th to the 30th in Memphis, Tennessee, and a call for papers has been issued. For information on the technical program or submission of papers, contact Joel Harrison, WB5IGF, 528 Miller Rd, Judsonia, Arkansas 72081.

(*****
IARU NEWS

On the international scene, word that the Ukrainian Amateur Radio League is the newest member society of the International Amateur Radio Union. President of the UARL and its IARU liaison is Nickolai Gostry, UT5UT; secretary is George A. Chlijanc, UY5XE. Also from the former Soviet Union news that the Union of Radio Amateurs of Russia has applied for IARU membership as well. Finally, the new address for the UA and RL prefix QSL bureau is PO Box 56, Kiev 252001 Ukraine.

(*****
HACKERS PUBLISH SECRET PAPERS

It's the revenge of the computer hackers. According to a report in the San Francisco Examiner, a group of hackers, apparently angry at government attempts to place restraints on what they feel is their freedom to communicate using any electronic means at their disposal, have distributed on a National Security Agency employee manual over the Internet. The report said that the manual was intended for internal NSA use only but the hackers found a way to distribute it on Internet. They also sent copies to several news organizations. This, apparently to

embarrass the government and prove that there is no way to keep
anything secret from a hacker.
The government believes that the computer users who distributed
the document hoped to undermine a federal push for data-encryption
regulations that would allow the government to tap into private
communications on computer networks.
The Clinton administration wants all new computers to contain a
microchip that would allow the government to tap into any
electronic transmission. Officials say that is necessary to
monitor criminal, espionage and terrorist activities.
The manual distributed describes the basic goals and duties
of NSA workers. It first appeared on a Texas-based hackers
network the week of April 4th. The identity of the person who
initially obtained the document and the method used are so far
unknown.

I have found my deal on Lithium AA 1.5 volt cells. As someone correctly pointed out to me once, 'lithium cells provide 3 volts, not 1.5', but, there they are! Anyone know just how it is done? A little dropping resistor :-) ?

>
How about the FCC giving the VEC's a list of new callsigns to be given
to successful examinees on the spot, and the VEC's just fill out a form
with the new call holder's name and address? Maybe some VEC's might let
people pick and choose a little from the list. "Can I have that one, 'ISE'?"
Similar security as that with the present paperwork. Only thing is that
no callsign should get "lost" (ie, never issued because someone VEC lost
that particular form with it printed on.). Shouldn't be any major problem.

I have heard a legend that a college radio station (either at MIT, Tufts, or Swarthmore) welded antenna to railroad tracks, and peeved the FCC by broadcasting nationwide. Is this true? If anyone knows, please email me (or post here) If you do know, could you please direct me to some documentation regarding this legend if you can.

This is very important! Thanks in advance.

HI!

I am considering buying a shortwave radio guide book.
Here are 3 three books to choice.
1.Passport World Band Radio 1994
2.1994 Edition Wordldradio TV Handbook
3.Shortwave Listening Guide Book, Harry Helms, Second Edition
Do you have an opinion on which one of these is better for my to buy ?

Please send mail to idpt783@tpts1.seed.net.tw preferably.

thanks a much !

Only problem (and I have found this with my own posting) is that the
"Pay-for-license" scam would be that much harder to nip in the bud.

Imagine if one of the corrupt VE crews had a bunch of licenses to
give out to people passing their exams, and some people came along
with a big wad of money and instead of just helping them all PASS,
which HAS happened, \

they were actually issued licenses, too...

Oy, the mess we could have... At the very most, the VEC should do
the filing electronically. We'd be reasonably certain to avoid il-
legally given licenses, and the time would still be fairly short.

: high emotions are running in this debate and Jay is correct in that
: some hams will certainly file a lawsuit if they can't get their way.
: It's a shame when volunteers, believing they are doing their job properly,
: have to fear lawsuits in carrying out their duties.

Jeff, you are entitled to your opinion. But Jay is completely off-base
when he takes the approach: "doesn't matter if I'm right or wrong,
because either way, if things are done other than my way, you will be
entangled in a tidal wave of frivolous lawsuits."

That's simply rubbish. There is no evidence of this other than, I guess,
one or two examples of someone threatening a lawsuit out in Texas.

Go over to Misc.Legal (where I am also active :-)) if you want to get
into a big discussion about frivolous lawsuits. Let's leave it out of
this thread. That's all I'm saying.

Jay's argument lacks validity.

4068. FCC Fees (historical) - Update

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-16 13:03:24 UTC
From: phb@syseng1.melpar.esys.com
Message-ID: <phb.771771804@melpar>
Source record: 265125
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

This is a follow-up to a comment I posted yesterday relative to FCC fees. Sorry, but nn isn't being updated here at work so if you've flamed me I haven't seen it yet.

My previous post was "off the top of my head" regarding what kinds of things were subject to FCC fees, so I went home last night and checked through some old records to clarify the issue of what the FCC used to charge for license applications. The excerpt below is from "The Radio Amateur's License Manual," 69th edition, 1973, pp. 5-6:

"Application Fees"

"The Federal Communications Commission fee for new or renewed amateur licenses is $9; for modification, such as change of address, $4; for duplicate license, $6; and for special call signs as provided for in Section 97.51, $25. A check or money order payable to the Federal Communications Commission must accompany each application. Note that this is a filing (emphasized) fee; FCC keeps the money whether or not a license is issued as a result!"

"All applications involving new or existing licenses of the Novice class, of military recreation stations (defined in Section 97.3), of RACES stations or involving reciprocal operating permits, are exempt from fees. Procedures for payment of fees are spelled out in an appendix to the FCC rules, Chapter 10 of this booklet."

Final comments: Appendix 6 to the FCC rules, which covers fees, is contained in the same edition of the "License Manual" on p. 113. I checked my 1956 (36th edition) "License Manual" and there is no mention of any fees in effect at that time. I really don't know the dates when fees went into effect or were later done away with.

: solved this problem already???

This is almost certainly due to a well-known Ford problem -- electrical noise from the fuel pump. Ford has identified this problem and written up a cure in their Technical Service Bulletin # 93-15-6. However, reports I have received about this fix are mixed; some hams say it cured almost all of their noise, while others say it did nothing. According to the Ford Customer Service folks, (via a League member report), their service bulletins are advisory only and not guaranteed to actually work, so if your vehicle is out of warranty and it doesn't work, they will not offer you your money back. I am not sure about the repair cost, but the fuel pump is inside the gas tank so it is not a 10-minute job.

Others have made similar suggestions.

I don't support instant callsign assignment by supplying VE's with a
list of callsigns. It complicates the assignment and management of
callsigns by the FCC, something that is probably enough of a headache for
the agency as it stands.

I could agree to instant electronic filing of applications by VE's. I
agree that this would (could) speed up the licensing cycle by an order of
magnitude. It would certainly unload much, if not all of the data entry
currently handled by the handful of clerks in Gettysburg. Given that a
mailing is done once a week, you could get a license well within two weeks
- a very reasonable waiting period.

However, what are the security issues associated with electronic
filing? Would it be any less subject to abuse than the current system?

I don't understand how corrupt VEs are more of a problem under
the proposed scheme than under the current one.

Current:
1. bad guy pays off VE
2. VE sends paper to FCC
3. bad guy gets license

Proposed:
1. bad guy pays off VE
2. bad guy gets license
3. VE sends paper to FCC

>Oy, the mess we could have... At the very most, the VEC should do
>the filing electronically. We'd be reasonably certain to avoid il-
>legally given licenses, and the time would still be fairly short.

But doesn't that turn in to:
1. bad guy pays off VE
2. VE sends computer data instead of paper to FCC
3. bad guy gets license

So what am I missing?

In article <1994Jun15.221000.3518@eisner>, cornelius@eisner.decus.org (George Cornelius) writes:

>Does anyone have experience with them

I've changed over all my portable gear (2m HT, scanner, CD player, portable SW, PDA) from nicads to Renewals (AA and AAA). I've been getting very good life out of the cells. What I like best about them is that they don't have nicad-like memories to worry about. If I'm unsure about how much charge is left in a set before heading out, I simply pop in a fully charged set (they don't drain unused, like nicads), put the questionable ones in the charger, and exit.

In fact, RayOVac suggests that charging them before they run too far down will help get more life out of them. Recharge times for low batteries can get pretty long (six hours or more occasionally), but that hasn't been a problem for me so far.

The cells are physically different, with almost no lip on the tubular case near the positive terminal. This difference in design makes sure that only Renewals will fit in their chargers. And, you must charge the cells with the Renewal charger--don't use the nicad chargers that come with your gizmos to recharge inside the gear.

In any case, I'm very pleased with the system, especially being free of nicad auto discharging and memory worries.

To operate from Greece according to the reciprocal agreement between the US and Greece you need to present your licence to the Ministry of Transportation and Telecommunication in Athens, Greece. To my knoledge this was required some years ago in order to obtain the local licence. You can also write to ARRL and find out more about it. Usually they have current info available about reciprocal agreement requirements.

I would like to know the frequency that is monitored by the US CoastGuard
in the range of 150-170 MHz for emergencies.
Which channel # is it? What is the frequency?

Please reply directly to my e-mail address.

Thanks in advance,

I agree - mine is on a ground-mounted tripod on a 10' pole, kind of
hidden in a tall bush. Last night I busted a pileup on 14.015 and got
him on my first call. That's sort of unusual, but it gives you an
idea of how well it can perform.

>Tuning it can be a bit of a pain - but once you get used to it, it's not bad
>at all.

I agree with that, too. It's an acceptable pain, considering that
otherwise I'd be off the air.

Subject: You know its time to retire from the hobby when....

... you're talking on the phone with a ham buddy, and you end the
conversation and hang up the phone with a 'KD1HZ clear'.
-- Michael P. Deignan, KD1HZ

...At least you weren't saying grace over a meal with your family!
N4TMI clear, er, I mean, Amen...
-- Michael Covington, N4TMI

...you end a face-to-face conversation with "dit dit".
-- Paul Flaherty, N9FZX

...You spend 2 hours trying to crack a pile up on 20 meters to work
a KJ2 station who is portable on Manhatten Island.
...Your wife points out that all of your children were born during
sunspot minimums.
-- Paul Valko, WB8ZJL

...you're having a Saturday breakfast and you say "call please" so
that you can interrupt a conversation to ask someone to pass the salt.
-- Dave Bushong, WZ1O

...You answer your phone, "QRZ?"
-- Mike Gauland, AA7JF

...And, after you find out who the calling party is, you say "your 59
in Virginia..."
-- Ben E. Cline, AC4XO

Don't laugh, I know someone who did that with his telephone answering
machine.
-- Kok Chen, AA6TY

...when you say things like "QSO" and "73" in casual, face-to-face
conversations.
-- Mike White, N4PDY

...You go shopping, get to the check-out, write a check, and sign it KE3HO.
-- James E. Proctor, KE3HO

...you're talking on an EMS telemetry radio with a base hospital for
medication orders and such, and sign out with your callsign...
No, I didn't do this, but N5JXS swears he did, and that he got a callsign
back...
-- Jay Maynard, EMT-P, K5ZC

...To get your ham buddies attention (who lives across the street), you yell 'CQ! CQ! CQ!' from your driveway.
...your wife starts talking to you while your on the phone, and you tell the person on the other end you're getting intermod.
...you've named your brand new German Shepherd puppy 'Radio Flyer' to combine two of your hobbies... (this is true, this is my dog's name...)
-- John C. Wren, KD4DTS

...you're talking to somebody face-to-face in a busy place and you say, "Let's QSY my office," and they know exactly what you mean!
-- Doug Renze, N0YVW

...u find urself typing in cw shorthand to fellow wrkers on internal email...(I hve found myself doing this too many times)...
...u tell people over the phone "I'm at my work QTH"...
-- Fred M. Davis, VA3FD

...When the kids get names related to radio. I'm Robert F. Casey, that's RF, or radio frequency, or go further, radio frequency choke. :-)
-- Robert Casey, WA2ISE

...You are in your car, and see somebody you know walking down the street. Instead of going beep-beep and waving, you pound out CQ on your car horn and wave.
-- Ed Bathgate, Awaiting license - Expects to be N3S** soon

...You're sitting outside somewhere, and you notice you've been hearing "O O O O O O," just a constant string of the letter "O," and for quite some time. Not consciously - it just popped into your head - and you start to listen to the surroundings...and there's a bird singing "OOOH OOOH OOOH," over and over and over...
--Scott Rosenfeld, NF3I

>So what am I missing?
>

What happens now is that many scams go through the VEC office
and are caught BEFORE licenses are issued. All that's necessary
is that the EXAMS are nullified - generally, nobody has to go
through the trouble of revoking licenses, either temporarily
or permanently. If the license were given prior to the VEC
checking of the forms, EVERY scam would result in granting, and
possible revocation of that license.

Who wants to deal with that? Just let the VEC do the filing for
the licenses, they still do their "double-checking & filtering"
job, and the turnaround time for licenses is STILL greatly
reduced.

In article <CrHn4A.I0I@world.std.com>, drt@world.std.com (David R Tucker) writes:

>>
: >>Therefore, 73 means "best wish".
That doesn't follow at all, of course.
<<

It's called "back formation" and is a well respected source of new words. For example, 'pea' as the singular of peas.... but peas used to be pease, as in pease porridge, and was not a plural. It ended with 's' so people thought of it as plural and invented 'pea' for one of those little green things. The same thing is beginning to happen with "kudos".

So, if 73s is taken as "best regards" (note correction), then 73 becomes "best regard" (just one of them).

So, the burning question is not what does "73s" mean, but just what is a "regard"... and how is one regard judged the "best" one.

>likely could happen, and that defending yourself against any lawsuit can be
>expensive and time consuming, it doesn't wash as a legitimate reason for
>setting the coordination policy a certain way.

That's an idealistic stance; in an ideal world, people wouldn't get sued for doing the Right Thing. This is far from an ideal world. Anyone who wants to do what many folks are claiming is the Right Thing and break longstanding agreements, even if they truly believe it's the Right Thing, had better go into it with their eyes open.

People who demand that others do things that will invite a lawsuit should be prepared to defend that suit. If not, they're just blowing smoke.

> I would hope that at no time the coordinators said to the repeater trustee
>"We are going to coordinate your repeater exclusively on these frequencies for
>the rest of time." I see no basis for a lawsuit if they coordinate another
>repeater on the same frequency. (That's not to say it won't happen. People
>sue all the time for all sorts of reasons, valid or not.) There are all kinds
>of ways of insulating yourself from lawsuits, though. Find someone with no
>visible assets willing to be the coordinator and put up with all the legal flak.

Good luck. The few folks who are willing to take on that thankless job tend not to be the ones with no visible assets; further, there's the matter of future assets. Just ask Karl Pagel about that.

You may not see any basis for a lawsuit, but there's enough of an implied contract there to give any lawyer a field day.

>Again, people will disagree and debate as to whether policies are "patently
>stupid" or brilliant and effective, but I would hope the policies are
>decided based on something other than who is threatening a lawsuit.

Nice ideal to strive towards. THis is the real world. The real world is never ideal.

4094. GB2RS News 19th June 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-16 18:11:56 UTC
From: dave@llondel.demon.co.uk
Message-ID: <771815516snx@llondel.demon.co.uk>
Source record: 265003
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 19th of June and here is the GB2RS news broadcast, prepared by the Radio Society of Great Britain.

First the headlines:

Your views are invited on the future of amateur satellites, We want to hear from you if you've suffered interference from modern fluorescent lights, and Sporadic E is forecast for ten and six this week.

There's an opportunity in July to influence the future of the Amateur Satellite Service. The IARU has appointed an ad hoc committee to canvass the opinion of individuals and organizations involved in the amateur satellite service and to report back to the Administrative Council in early September. The committee wishes to canvass the issues raised by the service, from the point of view of facilities provided, the users and potential users, as well as addressing the benefits and potential benefits to amateur radio in general. The identification of the future needs of the satellite service, particularly spectrum allocation and regulatory aspects is essential.

Two members of this international committee, VE3CDM and ZS5AKV, will attend the AMSAT-UK Colloquium at the University of Surrey in July and facilities have been provided for any radio amateur to attend a full discussion which will take place on Thursday the 28th of July at 7pm. No charges will be made for attendance at this meeting, but it is important for all attendees to obtain a Security Pass and Car Parking Pass before Friday the 22nd of July. Anyone who is interested in attending should send a self-addressed stamped envelope as soon as possible to: AMSAT-UK, London E12 5EQ. {Newsreaders, this is a complete address}.

The EMC Committee of the Radio Society of Great Britain would like to hear from anyone who has suffered interference from any of the new types of fluorescent lighting which have become available recently, particularly if the installation includes a dimmer. If you can help, please contact the committee chairman Robin Page-Jones, G3JWI, whose address is correct in the RSGB Call Book.

An RSGB Microwave Round Table meeting takes place today, Sunday the 19th, at the Crawley Amateur Radio Club premises, Pease Pottage, near Crawley, West Sussex. The event is organised by the RSGB Southern Microwave Group and commences at 10am. The attractions include technical talks, calibration and alignment facilities, and the usual round table discussions on current matters of interest. All are welcome.

The callsign GB5GS will be aired from the Goodwin Sands on Thursday evening, the 23rd of June, by members of the East Kent Radio Society. This will be a new WAB square for many because it is normally under water. Operation, on the 80 and 40 metre bands, will be from approximately 6.30pm to 8pm, depending on the tide.

The Science Museum station, GB2SM, in London, will be running low power on the 3.5MHz band today, looking especially for contacts with Novices. They will also operate on 21 and 432MHz.

The largest rally in Europe takes place this week at Friedrichshafen in southern Germany. The RSGB will be amongst the several British exhibitors at the event.

The Educational group STELAR - Science and Technology through Educational Links with Amateur Radio - will hold its first on-air activity day, from 1600 UTC next Thursday the 23rd for 24 hours. A control station from Harrogate Ladies College will be on the air using GB2SR and GB2HC. Packet will also be used and messages may be sent to G0HCA at GB7CYM. The group welcomes contacts with any station but is looking for as many contacts as possible with other schools and colleges. Skeds with GB2SR can be arranged by calling the shack direct on 0423 522285 over the period of operation.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Bolivia, the special call sign CP94USA will be used until the end of June.

From Benin, TY1IJ will be active until early July on most HF bands with emphasis on the WARC bands.

And from the Cayman Islands, N0TG will be active as ZF2GT from Thursday the 23rd until Thursday the 30th of June. Activity will be on all bands, with emphasis on CW and the WARC bands.

Now the rallies for today, Sunday the 19th of June:

The Belfast Radio Rally is be held at the Chimney Corner Hotel, 630 Antrim Road, Glengormley. The rally features the usual trade stands, a bring and buy stall and many other attractions.

The Bury St Edmunds Amateur Radio Society Car Boot Sale is being held at the Scout Pavilion, Stanton, off the A143 road. Doors open at 10am. The event features trade stands and a Raynet supplies stall. Light refreshments will be available. Talk-in by G2JO is on 2 metres.

The Denby Dale and District Amateur Radio Society Annual Mobile Rally is being held at Shelley High School, midway between Huddersfield and Wakefield on the B6116 road, two miles from its junction with the A636. Doors open at 11am. The event features trade stands, craft stalls, a bring and buy stall and a car boot sale. RSGB Morse Tests will be available on demand but participants must bring two passport size photographs. Refreshments will be available and talk-in is on channels

S22 and SU22.

The Newbury Car Boot Sale is being held at Acland Hall, Cold Ash, near Thatcham, Newbury. The sale starts at 9am, with set-up time from 8am. Talk-in will be on 2 metres channel S22 by GB4NBS.

Next the events we know of for next weekend:

The Wrexham Amateur Radio Society Mobile Rally is to be held next Saturday and Sunday, the 25th and 26th of June, at the Clwyd Veteran and Vintage Machinery Society's Annual Steam Rally at Plessey, Eyton, near Wrexham. The event features a radio and electronic related "car boot" flea market. Further details from Ian, on 0978 845858.

The Longleat Amateur Radio Rally is to be held at Longleat Park, near Warminster, Wiltshire next Sunday, the 26th. Follow the brown tourist signs for Longleat House, not the Safari Park, from the A36 road. Doors open at 9.30am. The disabled car park is located near to the rally. The event features over 150 trade stands covering communications, computers and associated peripheral. There's also an RSGB stand and a bring and buy for private sales. Other attraction include a craft fair, Royal Signals special event station, historic wireless equipment and refreshments. For further details contact Shaun, G8VPG on 0225 873098, evening and weekends.

Also next Sunday, the Norfolk Raynet Barford Rally is to be held at the Village Hall and Playing Fields, Barford, seven miles west of Norwich on the B1108 road. Doors open at 10am. The event features trade stands, car boot pitches and refreshments. Details from Bill, G4TWT on 0603 427008.

Now for the HF contest news:

The RSGB Summer 1.8MHz CW Contest takes place next weekend, from 2100 UTC on Saturday the 25th, until 0100 UTC on Sunday the 26th. For further details see April's RadCom, page 80.

The Russian DX Contest which was originally scheduled to take place next weekend has now been postponed until Friday the 29th and Saturday the 30th of July.

Next some VHF contest news:

The third RSGB 10GHz Summer Cumulative Contest takes place from 0900 to 2100 UTC, next Sunday the 26th of June. See April RadCom page 82 for details.

The RSGB's Premier VHF event, the VHF National Field Day Contest is from 1400 UTC on Saturday the 2nd, until 1400 on Sunday the 3rd of July. See April's RadCom page 82 for full details.

The third RSGB Backpackers 144MHz portable contest takes place from 1100 to 1500 UTC on Sunday the 3rd of July. This is an SSB and CW event and finishes one hour after VHF NFD. Full details can be found in the January and April editions of RadCom.

Special event stations this week include:

Today, Sunday the 19th, GB0GRK will be aired by members of the Inverclyde Amateur Radio Group from Gourock. The event is backed by the Inverclyde District Council and the Greater Glasgow Tourist board. The operation celebrates 300 years of Burgh status for the town and will be on air from 10am until 7pm, on all HF bands, 2 metres FM and packet radio.

GB4HIS, will be operational from Hampstead Infant School, Tanhouse Avenue, Great Barr during the school Open day next Saturday, the 25th. Further details from Ian, G0PAI Tel: 021 561 2884.

Also next Saturday, GX2BQY, will be active during the Southwick and North Bradley Scout Fete, operated by members of the Trowbridge and District Amateur Radio Club. Activity will be on the 80, 40 and 2 metre bands. The main events start at 2pm and includes many attractions for all the family. Further details from Ian, G0GRI Tel: 0225 864698.

Members of Wirral Amateur Radio Society will use GB4HP at the Wheels Extravaganza Transport Show on Saturday the 25th and Sunday the 26th of June at Vauxhalls Show Ground, Ellesmere Port, South Wirral. Operation will be from 10am to 5pm, on the HF bands and the VHF/UHF bands and packet radio. Further details from G4YWD on 0244 502320 office hours or 051 334 9200 evenings only.

GB2PYB, will be aired from Gloucester Park, Basildon, Essex next Saturday and Sunday the 25th and 26th for the Positive Youth Basildon festival for young people and the organisations that support them. The Vange Amateur Radio Society will operate the station to promote the appeal of amateur radio to young people. For further details contact Doris on 0268 552606.

And now the solar factual data:

The period from the 6th to the 12th of June has seen an increase in spot indices, solar flux and X-ray levels. Despite this, general solar activity remains very low. A flare was reported on the 7th - a B2.8/SF flare which is very small, but it has had a beneficial effect. Unfortunately magnetic coronal hole activity has affected northern stations in particular. It was not all gloom, however. Sporadic E has been widespread on both 6 and 10 metres most days.

The sunspot indices meaned at 43 units, but had reached 87 on the 11th. Solar flux levels rose slightly from 71 units on the 6th up to 86 by the 12th, giving an average of 81 units for the period. The 90-day mean flux level on the 12th was 81 units. The geomagnetic Ap indices have mainly been at sub storm levels due to the passage of coronal holes, and averaged 17.5 units. Levels varied from 9 on the 9th up to 27 by the 12th. The major disturbances were at northern latitudes. The state has been 'nil nothing to report'. The aa indices, as supplied by the British Geological Survey for the 31st May to the 6th of June, averaged 40.5 nanoTeslas for the period. Day to day levels hardly changed, there being no quiet or disturbed periods. The X-Ray flux levels have increased very

considerably, rising from A1.6 on the 6th up to A9.0 by the 12th. The average was A6.6 for the period. The Electron Fluence is still very high being 2.7+8 on the 12th. Until this declines by at least two orders of magnitude, ionospheric F level conditions will remain poor.

I'll repeat the figures. Spots - 43; Flux - 81; Ap index - 17.5; X-ray flux - A6.6.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon, for the period the 3rd to the 9th of June, averaged 6.2MHz. Day to day levels have not changed much. The highs are now between 19.00 to 21.00 hours and are continuing to decline due to the seasonal changes. The darkness hour lows averaged 3.4MHz, though they varied from 2.9MHz up to 4.2MHz over the period; the lows are now centred about 04.00 hours.

I'll repeat the figures. Highs - 6.2MHz; lows - 3.4MHz.

Now the ionospheric data for the north:

The F2 daytime critical frequencies at Ekaterinberg averaged 5.3MHz and the darkness hour lows 3.0MHz. Difficulty has been experienced with some readings due to the magnetic storms when only the F1 layer was detectable.

I'll repeat the figures: Highs - 5.3MHz; lows - 3.0MHz.

And lastly the solar forecast:

This week the more active side of the sun will be rotating away; solar flux levels are expected to be about the 75s. Geomagnetic activity is expected to increase as the week goes by and could be up to storm levels by the 26th with possible aurora at northern latitudes. Ionospheric levels in the south during daylight are expected to reach 21MHz, and 14MHz for the darkness hours. Northern stations could be well down on these levels due to the expected geomagnetic activity. Sporadic E is now at its peak and both 6 and 10 metres could give widespread contacts throughout Europe almost any day.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns issued were in the G0 Uniform Yankee and G7 Sierra Kilo series, and Novice calls in the 2 0 Alpha Inda and 2 1 Delta Charlie series.

--

GB2RS is prepared by the Radio Society of Great Britain and is broadcast in the 80m, 40m, 6m and 2m bands.

4095. Radio installation FAQ ?

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-16 18:20:24 UTC
From: turini@gdls.com
Message-ID: <2tq558$8gf@gdls.com>
Source record: 265008

OK, there's been a lot of messages flying around on which cars to buy to install a radio in, and how to install them.

Has any kind soul out there started a FAQ on it (or at least made a compilation of the messages)?

Bill

My humble and personal opinion:

They are not suited well for amateur use. They have a relatively
short cycle life (25 cycles), with degrading capacity after
5 cycles. The internal impedance is quite high, so that if
you count on them to supply 1A of power, the terminal voltage
will fall significantly. They have a sloping discharge characteristic,
so the last 50% of the cell capacity is supplied at 1.15V and less.
They can't be quick charged.

They are probably OK, for occasional use, where you may want to
use alkalines in the first place. But, for everyday cycling
use, get NiCds.

Are you talking about the Everady Lithium AA cells? If so,
they are 1.5V by design, as the chemistry is Lithium-IronDisulfide.
The more common Lithium-MnO2 and Lithium-CFx cells are
both approx. 3V.

I just called the FCC to find out what the status of my license application was (it's now 12 weeks, 4 days, and 2 hrs. since my test). The FCC person checked and informed me that my call had not yet been issued. She also told me the wait was 12-14 weeks.

Got the impression that they have been getting a lot of calls lately...

4101. AR 'etiquette'

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-16 19:52:13 UTC
From: jdavis@csid.gmeds.com
Message-ID: <2tqahd$ebo@babylon.csid.gmeds.com>
Source record: 265004

Can someone give help me find some good books on Amateur Radio 'etiquette'??

I have an electrial engineering degree and I am an Army Signal Corps officer, so I have a strong interest in radio. Many of the books I get from HAMFests are technical in nature and procedural about getting your license. I have not seen anything of substance about 'etiquette', but it seems that the 'old dogs' on the air insist on making people live by it... I understand the FCC regs pertaining to signal strength, freq usage, callsigns, etc., but where does it talk about the proper use of '73' and the 'nuances' behind 2m operation??

I throughly enjoy my hobbies, but there's nothing less disheartening than hearing from someone who says "This is how it's really done" in a vindictive tone like you should have known better. So, to help me (and possibly others) get off on the right foot, please direct me to a source of all the written (and unwritten) rules of AR etiquette and courtesy...

Thank you very much in advance!

4102. FCC licensing delay reason

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-16 20:11:15 UTC
From: johnsoj@autsb.allied.com
Message-ID: <199406162011.PAA08843@news.cs.utexas.edu>
Source record: 265002
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

I was talking to the local ARRL VEC coordinator yesterday evening on 2M.

He informed me that the FCC is rewriting the software which prints technician licenses to indicate whether or not the technician has passed the code test or not.

The reason for this is so that a technician will not have to keep both a certificate of completion and a copy of the license in order to use HF band privilages or to receive the 5 wpm credit when it comes time to upgrade.

Thus, a cause of the ticket delays.

Thought that those waiting might want to hear this information.

Jeff Johnson,
KF8UW

>Fred M. Davis VA3FD | These opinions are mine and are not

What about just a simple 73? I keep typing 73 only to
realize that I either have to:

1... edit it back out and add a more verbose ending, or...

2... explain what it means (which is often more verbose
than #1).

However, its always fun to reply with a few OF's in there, and have
them ask what it meant!

There exists an old telegraph myth (I can't verify it) that 73 was a
shorthand version of "Good Code" meaning that the other guy was sending
good code. It was normally sent at the end of a contact. Is it just
a coincidence that "G" is the 7th letter of the alphabet and "C" is
the 3rd?

DX Bulletin 36 ARLD036
From ARRL Headquarters
Newington CT June 16, 1994
To all radio amateurs

SB DX ARL ARLD036
ARLD036 DX news

The items in this week's bulletin are courtesy of Art, K9XJ, John, KB5QKS, The Ohio/Penn DX Bulletin, Chod, VP2ML, The DX Bulletin, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column in QST. Thanks.

CAMBODIA. Sanyi, HA7VK, will be active as XU7VK until February 1995. Listen on 20 meter SSB between 1245 and 1400z.

ANGOLA. The Red Cross will be sending Peter, ON6TT, to D2 land June 16 to July 16. He plans to be active on the low bands and the WARC bands. Commercial equipment will be used, so split operation will not be possible. QSL via ON5NT. After his stay in Angola, Peter will be active from Malawi until August 1.

KERGUELEN ISLAND. Pierre, FT5XJ, was recently heard on a DX net on 14226 kHz at 0530z. He plans to leave the island in July but will return three months later. QSL via F5NLL, listed as F1NLL in the Callbook.

BENIN. DJ4IJ, is active as TY1IJ, mainly on SSB and the WARC bands. Check 14275 kHz around 2200z. QSL via DJ5IO. TY1PS was active last weekend in the RTTY contest. QSL via Peter Schulze, B.P. 06-2535, Cotonou, Benin.

CENTRAL AFRICA. Gene, TL8NG, has been busy with CW on the WARC bands. Check 12, 17 and 30 meters between 1330 and 1600z and again after 0430z. He also shows up on the 21335 DX net around 1400z. QSL via WA1ECA.

THE GAMBIA. Uli, C56/DK2OC, and Brendan, C56/G0UCT, will be closing down operations shortly after this bulletin starts making the rounds. QSL C56/DK2OC via DK2OC, and C56/G0UCT via G1GMZ.

CAPE VERDE. Angelo, D44BC, has been heard on 17 meters and RS12. Check 18128 kHz around 1130z. Listen on the satellite downlink between 29430 and 29445 kHz from 1200 to 1430z.

TONGA. Paul, A35RK, will be going QRT June 18. Tune between 14175 and 14226 kHz from 0330 and 0500z. Also, check the low end of 40 meters for his CW at 1330z. For RTTY QSOs, try around 14086 kHz during the same times. QSL via KK6H.

VANUATU. YJ0AVH frequents 14196 kHz between 0230 and 0600z.

ARUBA. Art, K9XJ, will be signing P4/K9XJ or P40XJ June 16 to 23. This will be a casual operation with most activity on the Novice/Tech Plus frequencies. QSL to his Callbook address.

LIECHTENSTEIN. Eight members of the Eindhoven Students Radio Amateur Club, will be active from 1800z July 6 to 1200z July 11. This all band, multimode operation will also include 6 and 2 meters, and 70 centimeters. Their main emphasis will be taking part in the IARU HF Championship on CW and SSB and the CQ WW WPX VHF/UHF Contest. The group has requested the call sign HB0TUE for the entire operation. If they cannot get the requested call sign, operators will sign HB0/ and their personal call signs. QSL via PI4TUE.

MALYJ VYSOTSKIJ ISLAND. R1MVI will be active during the Russian DX Contest, July 30 and 31.

TURKS AND CAICOS ISLANDS. Will, AA4NC, plans to sign VP5NC in the IARU HF Championship on SSB and CW. There will be activity before and after the contest on the WARC bands. QSL via CBA.

SIX METER DX. John, KB5QKS, reports that 6 meters has been great so far this season. His recent DX contacts include: C6APF, HH2PKB, HH7PV, KP4SQ, TI2NA, TI4JHQ, WP4KJJ, XE3EB and XE3WP. PacketCluster spots show this to be an outstanding sporadic E skip season.

THIS WEEKEND ON THE RADIO. The All Asian DX Contest, CW, sponsored by JARL, is from 0000z June 18 to 2400z June 19 on 160 through 10 meters. Exchange signal report and a two digit number denoting operator age. YLs and XYLs may send signal report and 00.

The SMIRK QSO Party, sponsored by the Six Meter International Radio Klub, runs from 0000z June 18 until 2400z June 19 on six meters only. Contacts between stations in the 48 contiguous states must be made above 50.125 MHz. Exchange call sign, SMIRK number and grid square.

More detailed information on both of these contests appears on page 138 in May QST.

Source record: 265010

Waah, Waah, Waah. {:-)

Sorry to be so cynical but this is one thread that keeps going and going and going .....

Fact is VECs are volunteer organizations and the FCC is a government agency.
You know, I'm from the government and I'm here to help you. Right.

Ham licenses are a very small part of what the FCC does. As a matter of
fact I'm sure it is a very small and low priority responsibility of theirs. However, all is
not doom and gloom. Things are getting better. With the VE program you can take an
exam within an hour of your home on just about any given week. Not to dwell on the
past, but I used to have to make an 1.5-2 hour trip to Chicago to take the exam on any
Tuesday or Friday morning. Kind of tough when you are 15 and still in school and don't
have a license much less a car. So availability has gotten better. Comparing the
volume of 610s that the FCC goes through today compared to 1979, I would have
to say that they are doing better because my 1979 license took 16 weeks.

Now that the FCC is going computerized it should be an even quicker turnaround
with instant licensing just around the corner. So be patient and remember that our
goverment isn't a fast one and it isn't slow, but kinda half fast if you know what I mean.

Bear with it and I bet your license won't lose any of it's attraction when you finally do
get it.
In fact you will cherish it all the more.

4113. Re: ** WAITING PERIOD FOR LICENSE ?? **

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-17 02:21:19 UTC
From: jsalemi@doghouse.win.net
Message-ID: <303@doghouse.win.net>
Source record: 264939

In article <gregCrFsIp.4Mx@netcom.com>, Greg Bullough (greg@netcom.com) writes:
>No, the FCC proposed a solution, instant licensing, which would allow
>them to do their thing without impacting people waiting to get on the
>air, and that great representative of Amateurs everywhere, the ARRL,
>shot it down. I suspect that even the old 'we took a survey and found
>that the will of the amateur community...' excuse won't even be available
>to be dragged out here. I can't imagine a ham who would check the 'NO'
>box on a question of 'Would you like to see immediate licensing and
>issuance of call signs for aspiring hams who pass a VEC session?'

Actually, the FCC got a lot of comments on the proposal from a lot of
hams, and very very few were in favor of it. I suggest you read the
news reports about it in the ham magazines for confirmation.

6-15-94

The following list of Boston Area Radio Club Field Day Sites was
compiled for inclusion in a Boston Globe article. Thanks to everyone
who provided the source info.

I have received several requests from the ham community for
clubs to participate with, so I have decided to also post it
to the net.

All the clubs listed invite the public to observe, most would also
welcome guest operators.

List Compiled by Steve Finberg W1GSL

Club Location Town

As I have witnessed among the amateur community, there are those individuals who are not afraid of change and progress and there are those who insist upon static definitions created many years ago. "73's" is one such case - get used to it! As a matter of fact, some will use the term in such a way as to gaul another. Or, in some cases, the regional usage has already accepted the change. My personal belief is that by stating "73's" one wishes the very best to an individual, and if it is sent to a group, it should mean "best regards to all". After all, do you really want to limit the amount of goodwill on this planet? Wish as often as one would like! Let's enjoy the hobby and not get bogged down in mere semantics and so what if we use a specialized lingo that was once just for CW and message relaying! This is supposed to be fun, right?

>repeater guide with me, but I think six is pretty close to the actual
>number of pairs -- out of all the 440 band -- where open repeaters are
>coordinated.

Robb is close on 6 open pairs, the book shows 9. monitoring some of these
pairs shows light usage on those I can hear. As an example, 449.425 is
a friendly pair in the San Fernando Valley and West LA but has room for
somewhat more users. Sure they are co-channeled with several others. The
terrain helps here as with others. Another pair 447.025 is coornated as a
wide area pair is quite, dont know what happened here but is does not sound
as if it is in use.

I wonder how many applications are pending for open pairs and how many open
machines are on the test pair. Are people realy serious about putting up
an open machine for all to use.

>
>Every other pair has a single or multiple closed-channel repeaters on

VK2SG RTTY DX Notes, 17 June
VK2SG RTTY DX Notes for week ending 17 June 1994 (BID RTDX0617)

The ANARTS (Australian) WW RTTY DX Contest last weekend produced some
nice DX in spite of spotty conditions.

Our information this week came from DJ3IW and the Central Europe DX
Cluster DB0SPC, I5FLN and the IK5PWJ Packet Cluster, K7WUW, KP4GE,
PA0RVR, WB2CJL, W5KSI, 9K2EC, and the NJ0M node of the Twin Cities DX
Packet Cluster Network. Thanks to all for your help.

Notes of Interest:

The Eindhoven Students Radio Amateur Club will go on a DXpedition to Lichtenstein, HB0, 6-12 July. Activity is planned on all 9 HF bands, and on 6m, 2m, and 70 cm. On the weekend of 9-10 July they will be in the IARU HF Championship Contest. They have requested the callsign HB0TUE, but may have to use personal callsigns /HBO. QSL to PI4TUE via bureau or CBA.

Aves Island will be activated again on digital modes and SSB and CW by the Radio Club Venezolano using the call YW0RCV from 21-25 July. All bands except WARC will be used. QSLs go to the IARU bureau, YV5AJ, Radio Club Venezolano, P.O. Box 2285, Caracas 1010-A, Venezuela, with return postage in excess of one IRC.

For next week's Bulletin, Bob, WB2CJL will be pinch hitting for Luciano, I5FLN. Please send your Bandpass and Notes to WB2CJL @ W5KSI.#NOLA.LA.USA.NA or WB2CJL @ I5FLN.ITA.EU

4122. New England-Maritime 2M Inversion Notice

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-17 13:26:52 UTC
From: a4q4@jupiter.sun.csd.unb.ca
Message-ID: <2ts8as$70t@sol.sun.csd.unb.ca>
Source record: 264928

For those of you who are avid 2m inversion DX'ers like myself, I thought it may be interesting for people in Maine, New Hampshire and Mass. to have some kind of " 2M INVERSION DX NET" on a repeater which would likely be heard for the greatest area during a lift. I have found that costal repeaters tend to travel the furthest during these inversions, so a repeater close to the water would be an obvious choice. From past experience, I have found the YARMOUTH, NS repeater (146.730- VE1YAR) to be quite a hot device during these condtions, as it is a high quality repeater which is out on the most SW tip of Nova Scotia. Although I cannot work this repeater during normal conditions from my house, it comes in quite strong with the dlightest inversion (I am about 100 miles to the north of it on the south shore of NB). Perhaps this could be a Mecca for those who want to work PEI, NS and NB in New England and vice versa. Perhaps some alternates would be 146.820- (Camden, ME) or 147.195+ (St.George, NB).

Let's give them a try and see how well it works. Any suggestions/ideas are welcome.

> so the last 50% of the cell capacity is supplied at 1.15V and less.
> They can't be quick charged.
>
> They are probably OK, for occasional use, where you may want to
> use alkalines in the first place. But, for everyday cycling
> use, get NiCds.
>
> -Ken

And after 25 re-charges they have degraded to *only as much*
capacity as a nicad has. The roll-off of voltage gives you some
indication that your batteries are dying, so you can finish a
conversation before replacing them. You can leave them in a scanner
for several months, and still expect them to be darned near to fully
functional when you need it. They don't develop internal shorts that
make you think your pack is charged but it dies instantly when you use
it.
The down side is they ain't worth squat in high-current
applications. If you *must* ALWAYS run your HT on the highest power
setting, these are not for you. I've had very good luck with them in
a DJ-580 on medium and low power, even accidentally leaving it on
overnight *after* heavy use that day, and it was still working the
next day.
They cannot be quick-charged (which tends to mean an early grave
for ni-cads if done often).
Many rigs can charge the ni-cads while running off of 12 volts from
the car. Renewals won't do this.

I'd say they would work well for amateur radio, given that you live
with the FCC regs requiring *only as much power as necessary for the
desired communications*.

For what it's worth, I have a much less enthusiastic tale...
An apartment-dwelling friend gave us his, that he was going to throw out. Another of his friends had one and *did* throw it out. We spent several hours removing the slop in the gearing and re-building the stepper time constant to allow finer control to make tuning a little easier.
Next day we had it on a 20 pole, and side-by-side with our moderately long (4.5MHz MARS length) slightly crooked dipole (at 10') we tried to check in on the Maritime net on 20M. With 100 watts we were at best occasionally audible. Went to the dipole and were coming in S-8.
It worked better than a wet noodle, but not by much. We sold it at the next ham-fest, after making sure the new owner knew it would be better than a resistor but not by much.

How about this as a test? Put a 50-ohm 200 watt dummy load in the air at 40 feet, and see how well you get out? You'll be amazed.
BTW other problems we had was the receive using the Iso-loop was down about 2 S units from the dipole, and we had to turn off all the computers because RF was getting into everything. Even with the slower stepping, tuning was a real pain in the bum. And I still have guilt feelings about selling it to somebody who thought he was getting a good deal.

The following action was released by the FCC. For the un-informed, what does this really mean ? What would be an example of an HF operation that would comply with this FCC proposed rule making ?

==========

Report No. DC-2613 ACTION IN DOCKET CASE June 15, 1994

AUTHORIZATION OF AUTOMATIC CONTROL FOR HF DIGITAL COMMUNICATIONS IN AMATEUR SERVICE PROPOSED
(PR DOCKET 94-59)

The Commission has proposed amending the amateur service rules to authorize automatic control of stations transmitting a digital emission on the High Frequency (HF) amateur service bands.

This action was requested in petitions filed by The American Radio Relay League, Inc. (ARRL), and the American Digital Radio Society, Inc. (ADRS)

The propagation characteristics of the HF bands allow for long distance communications. Amateur operators take advantage of these characteristics to communicate with other amateur stations all over the world. Establishing and maintaining a HF communications link, however, presents operating demands not encountered on the Very High Frequency (VHF) and higher frequency bands. The variables affecting communications in the HF bands are highly complex. To maintain the communications link and avoid causing interference to the communications of other amateur stations, the control operator constantly monitors the activity on the channel being used and adjusts the station's transmitting parameters as needed. Because the presence of the control operator has been necessary for proper operation in these systems, automatic control of an amateur station that is transmitting on any HF band or on the 160 meter MF (medium frequency) band has not been authorized.

In 1986 the Commission authorized automatic control of amateur stations transmitting digital communications on the VHF and higher frequency bands and indicated it was interested in authorizing automatic control of stations using the HF bands.

(over)

To determine solutions to the problem of avoiding interference from automatically controlled HF digital stations the ARRL conducted a successful feasibility project under special temporary authority the Commission granted to 50 amateur stations. The ARRL's petition is based on the results of that study. The ADRS's petition contained an additional recommendation from amateur operators who have been experimenting for several decades with digital communications on the HF bands.

The Commission said it was gratified by the cooperation and dedication of organizations within the amateur service community in determining the conditions necessary to allow automatic control of stations transmitting data and RTTY (narrow-band direct printing) emission types on the HF amateur service bands. It agreed with the petitioners that automatic control of amateur stations in the HF bands can, with safeguards, make the transmission of data and RTTY emission types practical and effective.

Therefore, the Commission proposed to authorize automatic control for stations transmitting data and RTTY emission types on one specific subband of each HF band where such emissions are authorized. It also proposed to authorize communications between a locally or remotely controlled station and an automatically controlled station on any frequency where data and RTTY emission types are otherwise authorized.

The Commission said that it firmly believes in the principle that government should be responsive to user needs. It noted that the rules it proposed were the result of a successful feasibility project planned and carried out within the amateur service community and represent the recommendations of two organizations dedicated to bringing the benefits to be derived from the transmission of digital communications on the amateur service HF bands to amateur operators in the United States and elsewhere without causing unnecessary interference to other types of communications.

Action by the Commission June 13, 1994, by Notice of Proposed Rulemaking (FCC 94-171). Chairman Hundt, Commissioners Quello and Barrett, with Commissioners Ness and Chong not participating.

>Can someone give help me find some good books on Amateur Radio
>'etiquette'??

sure...

>from HAMFests are technical in nature and procedural about getting your

#1...ham isn't an acronym or an abbreviation -- it need not be capitalized. hamfest, ham radio -- better yet, use "amateur radio" or "Amateur Radio" since "ham radio" seems to equate to "Citizen's Band Radio" in the eyes of the unwashed...and we're no longer having to use stations that look like they were picked up at Dr. Frankenstein's garage sale (seemed to be a staple of League publications well into the 70's...).

>it seems that the 'old dogs' on the air insist on making people live by
>it... I understand the FCC regs pertaining to signal strength, freq
>usage, callsigns, etc., but where does it talk about the proper use of
>'73' and the 'nuances' behind 2m operation??

true..like anything else, there's what you need to pass the test and then there is the larger set of information of what you need to know that wasn't on the test. the ARRL produces a couple of things and used to produce a tract called "Your Novice Accent" that is a guide to avoid stumbling around...

in general just using normal english will do for most situations. think of it like you are using the telephone when using voice on 2m FM and just say what you have to say w/o "uuuuhhhh"-ing your way around the jargon you haven't picked up yet.

listen, listen and listen some more and listen to more than 1 repeater and such to get a feel for things and to avoid only hearing how things are done in one place....

i would also consider the CQ Magazine video tape series to be helpful in this regard (i don't have the "getting started in VHF" tape yet...)

>of all the written (and unwritten) rules of AR etiquette and courtesy...

may want to pick up a copy of the ARRL's operating guide and subscribe to 73, CQ or join the ARRL to get QST. beware - there are some "written" rules that are just plain onerous and obnoxious such as calling CQ with the "3 x 3 x 3" method when really short calls with frequent breaks to see if you're being called are preferable.

Hello and good day!

If you have any info on Connecticut Field Day Sites, drop me email
"please..." to brunelli_pc@delphi.com.

If possible, include location, class, call sign(s) to be in use
and any info on coordinators or contact personell.

Also, hearsay and rumors are welcome.

To kick it off,
N1QDQ will be operating 1B from Mowhawk Mtn in Cornwall, CT.

I will post a listing on Wed., and a final on Friday, 6/24

thanks andd 73 for an xlnt fd

I do find your sarcasm funny. Really...I do. It is true that some people are a bit over zealous about what they think is propper. However radio etiquette or whatever kind of etiquette is somehting very subjective. I have read several operating manuals and I remember one arrl manual mentioned that 73's was technically incorrect. But who's counting [please pardon the pun]. I would normally say propper etiquette is something learned by example not necessarily read about...but given the state of affairs in amateur radio now [at least in my vicinity] I would highly advise against that method. In my area there seems to be less and less courtesy and good operating practices everyday. This is happening for a whole host of reasons which I will refrain from right now. I guess try to make the best of a bad situation.

HR AMSAT ORBITAL ELEMENTS FOR WEATHER SATELLITES
FROM WA5QGD FORT WORTH,TX June 17, 1994
BID: $ORBS-168.W
TO ALL RADIO AMATEURS BT

Satellite: NOAA-9
Catalog number: 15427
Epoch time: 94167.74678503
Element set: 842
Inclination: 99.0533 deg
RA of node: 218.2332 deg
Eccentricity: 0.0014197
Arg of perigee: 218.9243 deg
Mean anomaly: 141.0907 deg
Mean motion: 14.13622176 rev/day
Decay rate: 8.4e-07 rev/day^2
Epoch rev: 49028
Checksum: 311

Satellite: NOAA-10
Catalog number: 16969
Epoch time: 94167.73609929
Element set: 740
Inclination: 98.5022 deg
RA of node: 176.7464 deg
Eccentricity: 0.0013788
Arg of perigee: 335.5349 deg
Mean anomaly: 24.5180 deg
Mean motion: 14.24889628 rev/day
Decay rate: -1.7e-07 rev/day^2
Epoch rev: 40254
Checksum: 342

Satellite: MET-2/17
Catalog number: 18820
Epoch time: 94168.23877222
Element set: 312
Inclination: 82.5406 deg
RA of node: 268.5405 deg
Eccentricity: 0.0016260
Arg of perigee: 175.4425 deg
Mean anomaly: 184.6887 deg
```

Mean motion: 13.84717026 rev/day
Decay rate: 8.0e-07 rev/day^2
Epoch rev: 32236
Checksum: 310

Satellite: MET-3/2
Catalog number: 19336
Epoch time: 94167.93501398
Element set: 296
Inclination: 82.5373 deg
RA of node: 323.8588 deg
Eccentricity: 0.0015676
Arg of perigee: 265.2572 deg
Mean anomaly: 94.6761 deg
Mean motion: 13.16967664 rev/day
Decay rate: 5.1e-07 rev/day^2
Epoch rev: 28322
Checksum: 344

Satellite: NOAA-11
Catalog number: 19531
Epoch time: 94167.78766704
Element set: 662
Inclination: 99.1721 deg
RA of node: 156.6873 deg
Eccentricity: 0.0012261
Arg of perigee: 130.2107 deg
Mean anomaly: 230.0163 deg
Mean motion: 14.12994827 rev/day
Decay rate: 1.20e-06 rev/day^2
Epoch rev: 29516
Checksum: 296

Satellite: MET-2/18
Catalog number: 19851
Epoch time: 94165.90933321
Element set: 296
Inclination: 82.5177 deg
RA of node: 145.7365 deg
Eccentricity: 0.0012706
Arg of perigee: 230.6098 deg
Mean anomaly: 129.3939 deg
Mean motion: 13.84366225 rev/day
Decay rate: 4.3e-07 rev/day^2
Epoch rev: 26737
Checksum: 331

Satellite: MET-3/3
Catalog number: 20305
Epoch time: 94167.77116453
Element set: 71

Inclination: 82.5562 deg
RA of node: 270.2734 deg
Eccentricity: 0.0005343
Arg of perigee: 297.9843 deg
Mean anomaly: 62.0727 deg
Mean motion: 13.04424679 rev/day
Decay rate: 4.4e-07 rev/day^2
Epoch rev: 22284
Checksum: 296

Satellite: MET-2/19
Catalog number: 20670
Epoch time: 94166.13556307
Element set: 801
Inclination: 82.5472 deg
RA of node: 210.0963 deg
Eccentricity: 0.0016138
Arg of perigee: 146.5713 deg
Mean anomaly: 213.6461 deg
Mean motion: 13.84189089 rev/day
Decay rate: 4.3e-07 rev/day^2
Epoch rev: 20033
Checksum: 287

Satellite: FY-1/2
Catalog number: 20788
Epoch time: 94168.04506144
Element set: 994
Inclination: 98.8342 deg
RA of node: 188.1798 deg
Eccentricity: 0.0016270
Arg of perigee: 12.5600 deg
Mean anomaly: 347.5966 deg

Guess this must be so that they get credit for the idea (like who cares about
that to begin with?) Seems to me that many amateurs suggested something
similar when the no-code thing began. Like a separate callsign group or
something similar to distinguish the no-code folks from the others.

I believe if the FCC had done this from the beginning the delays would be
over with by now and many CSCEs would be in the circular file or some other
file for posterity's sake or something like that. Just shows to go ya,
how our government works. Certainly not for the people.

What does this mean now? That all no-coders are going to automatically
receive a new license with the appropriate data printed on it? Or will a
notice be sent out for all no-coders to submit a new 610 in order to receive
the new ticket? I know how operations like that normally work. Many will
claim they never knew the FCC was creating a differentiation in the licenses.
Others just won't want to have to support the Postal Service. It won't be
the $.29 they'll have to part with but the spit it took to make it stay on the
envelope.

: station interfering with your simplex transmissions how far do they have to be
: from you officially? Just windering.....

Officially as in "FCC officially"? There is no minimum. You can operate
anywhere within your band that you choose, BUT...

There is a band plan, a gentleman's agreement that everyone is expected to
respect. Depending where you are, the channel spacing is either 15KHz or 20 KHz
(I think in CA, it's 20 KHz [someone please correct me if I'm wrong!]).

If you have interference problems, make contact and then move to another
unused simplex frequency. There ought to be plenty of them to go around, even
in CA.

From Tad Cook, KT7H
Seattle, WA June 17, 1994
To all radio amateurs

SB PROP ARL ARLP024
ARLP024 Propagation de KT7H

Solar flux was up about 15 points last week, but still stayed below 90. Disturbed conditions peaked on the 12th, when the K index reached 5 for a single three hour period, and the A index for the day was 22. Since then conditions have been improving, with the solar flux slowly rising and the geomagnetic field becoming more stable.

An event on June 12 was supposed to cause a disturbance before the end of the week, but nothing happened. Look for the A index to stay low until a recurring coronal hole reappears around June 26. Solar flux should peak near 90 over the next few days, and then drop back to around 70 from June 25 though July 4.

Sunspot Numbers from June 9 through 15 were 62, 70, 80, 89, 73, 88 and 96, with a mean of 78.3. 10.7 cm flux was 83, 85.4, 86.4, 86.3, 85, 85.3 and 88.2, with a mean of 85.7.

The path projection for this week is from Omaha, Nebraska to Angola.

Check 80 meters from 0130 to 0500z, and 40 meters from 0100 to 0600. 30 meters looks good from 0000 to 0330 and again from 0530 to 0645. 20 meters should be open from 2200 to 0200, and again from 0600 to 0730. 17 meters should be open on most days from 1830 to 0000. 10, 12 and 15 meters do not look good over this path at this time.

The main telephone number to Yaesu is:

(310) 404-2700

You will get a voice menu that will step you through choices such as
customer service / technical support
sales
parts

Sorry I did not have the direct number here in the office, I is at home with
all my Yaesu stuff, but this number is just as good.

In Germany you usually get your license the day you have passed your exam,
but it must be said that there aren't so many hams than in the USA, and
the examinators are from the governmental office for telecommunications.
On the other hand, in France you'll have to wait several weeks, too.

But because this group already carries a lot of traffic, I would recommend
you to restrict the distribution of articles concerning a special country
or continent to the appropriate region. This will save a lot of bandwidth.

I just called Henry Radio, since it is a local call from me, and asked
the operator for the Service Departments telephone number.

The local number, you have to pay is: (310) 820-1234
this is a voice response with menu options.

The number you want (toll free) 1-800-877-7979 ext. 240
will get you the Service Department.

4148. Icom 22-S info needed

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-17 16:58:04 UTC
From: George Rybicki <seryb@lims01.lerc.nasa.gov>
Message-ID: <2tskms$4tp@sulawesi.lerc.nasa.gov>
Source record: 264944

I recently purchased an Icom 22s at a local hamfest. It is the model that tunes 146-148
in 30 kc steps, it has a toggle switch for the 15kc steps. The seller said that he added a new
switch from Icom which shows the actual frequencies rather than just the 22 diode programable channels. The rig works fine.

Does his explanation makes sense, is this really and Icom modification, or was it some after market gismo? Finally is there a way to get down to the repeaters below 146 mhz.

Thanks for the help 73 George

Actually, the FCC got a lot of comments on the proposal from a lot of
hams, and very very few were in favor of it.

And for good reason. I agree with the decision.

Speeding things up with electronic filing from the VEC is a different
story and a good idea.

I don't know how much different a renewal is from an address change but I
sent one in and it took 12 weeks. I think yours is a little late and I'd be
calling right about now.

Does this mean that people entering as Novice Class operators will
not experience the delay that no-code Techs have been experiencing?

Just wondering, since I'm just now at the point where I feel
comfortable with 5 WPM code and think that if the above is true I'll
go for my Novice ticket and upgrade to tech later. This way all I
have to do is append my callsign and there's no extra wait!

Oh, no. I hope the FCC isn't actually rewriting it. Aren't they the
ones who wrote the dissertation that says, basically, that laserprint
rubs off?

I think it goes something like this:

It is advisable that this license be coated with a plastic laminate
substance in order to preserve the integrity of this document. The
commission has determined that, under certain conditions, laser print
is subject to displacement.

They'll probably do it in COBOL.

: I am interested in information about Rayovac "Renewal" reusable alkaline
: batteries.
[...]
: Does anyone have experience with them or understand how they work? Is
: it possible to charge them yourselves, or are the specs for doing so
: being kept quiet by the manufacturer?

I've been using them since they first hit the market. One major problem is that the AA size is only rated at 700mA peak current, and the typical HT pulls a little over 1A at high power xmit. My experience is that this _significantly_ cuts down on the power output from an HT. However, if you are using an HT to mostly monitor (mine pulls about 60mA with squelch closed, about 120mA with squelch open at full volume), they work fine.

They have very low self-discharge rate. Ray-O-Vac claims 5 yrs, but I haven't measured it (yet ;-).

Occasionally you'll run into a cell that the charger "never turns off" for. Also, the recharge times in the literature seem pretty optomistic, at least in my experience. (5 hours is the stated time for AA, but mine often take nearly a day.)

The literature implies that the charger pulses the cells at 120Hz (gee... wonder how they generate that! ;-) and measures the voltage between pulses, shutting off when the cells are fully charged.

Every pack of them has an 800 number you can call. Ask them to send you the data sheets. (Sorry, I don't have the number here.)

My recommendation is that they are good for places where a typical NiCd would last at least 5 hours _under worst conditions_ (like with the xmit button down at high power - so the typical HT is not a good candidate), and where the typical alkaline battery would last less than 1 year of "normal" service. (If it lasts longer than 1 year, probably cheaper to just use normal alks.)

My biggest complaint is that they aren't available in the 9V size - I've got a lot of applications where a 9V Renewal would be ideal. (Due to the need to control each cell's charge separately, don't hold your breath on seeing one soon, either.)

My only connection with Ray-O-Vac is as a (fairly) satisfied customer. ;-)

No.

If everyone started saying "3's and 8's to ya, good buddy" I wouldn't
get used to that either. Since the term "73's" came from CB, as did
so many N#xxx callsign owners, I would expect that eventually they
would get tired of being made fun of by us grownups for saying stupid
things on the air.

Do you know what I say at the end of a conversation on the radio? It's
usually something like "Talk to you later" or "So long" or "Nice
talking to you".

Simple, no?

4158. Tech+ license issued.

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-17 19:20:11 UTC
From: au919@yfn.ysu.edu
Message-ID: <2tst1c$7c6@news.ysu.edu>
Source record: 264954

I was very much surprised when I looked at my mail yesterday afternoon. There, in an envelope with a FCC return address, was a new license issued to me with a class of 'TECH PLUS'! I had passed my 5 wpm cw test in March, collected my CSCE, and merrily went home to try out my new (to me) HF transceiver. (Upon which it rolled over and played dead, but that's another story :-( ) I had heard (read here) that the FCC had plans to record this 'upgrade', but didn't expect to receive anything from them. I just planned on keeping my CSCE proudly on display in the shack until I ugraded to General. Anyway, I'm here now to attest to the fact that the FCC _is_ now issuing new licenses to people who upgrade from TECHNICIAN to TECH PLUS.

4160. Datapoint for NJ Ham plates

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-17 19:22:57 UTC
From: mellis@ramcad.pica.army.mil
Message-ID: <CrK36A.Crw@pica.army.mil>
Source record: 264963

I posted a message here a week or so ago, about how long it takes NJ to crank out license plates with my callsign. I got a couple of responses, around 12-13 weeks. I checked, and it's 13 weeks now.

Feels similar to the waiting anxiety I felt while waiting for the license. Nothing like the stress you feel that split second before you open the mailbox :-) Of course, I can now whine about it on the local repeater. (Right, Seth???)

According to last Sunday's paper, NJ is issuing special plates for any damn thing, so the office that handles them are probably swamped. Hard to believe, but NJ has special plates for "Penn State Alumni".

Just updating anyone who is interested, and thanks to the few who responded.

Regardless of the repeater channel spacing (here in Michigan it's 20KHz) simplex spacing (or spaving, if you will) remains 15KHz.

Time Out for a rec.radio.amateur.misc "PET PEAVE"

Heard on the repeater:

"Where are you?"
"Uhhhh... 3rd and Walnut"
"Oh that's close! Wanna try simplex?"

I think to myself, "Whoa! That's cool! Nobody does that anymore!"
Then I hear...

"Sure... where do you want to go?"
"Uhhh... Five-Two?"
"O-kay! See you there! blah-blah... clear"

Not that going to .52 is an evil thing, but I guess I still think of it as a "calling" channel... even if it's dead most of the time. I think that if you have invested in a multi-VFO, extened rcv/(tx), multi-hundred dollar radio... you COULD try something like .55 or .58 or 7.42

According to Rayovac, who replaced several of my cells for this problem,
the early batches were prone to develop internal shorts after a few
cycles. Send them back.

>The literature implies that the charger pulses the cells at 120Hz (gee...
>wonder how they generate that! ;-) and measures the voltage between pulses,
>shutting off when the cells are fully charged.

Actually it varies the duty cycle from about 70% (if I remember) down to
zero as the voltage rises. When the duty cycle falls to 25% the LED goes
out. However, since the big and small chargers have different peak
current, a 25% duty cycle will deliver different amounts of current when
the light goes out. The only way you'll get full capacity after removing
the cells immediately after the light goes out, is to use the big charger
only for C and D cells. If you charge Aa/AAA's leave them in overnight.

This is a provocative idea, not just for this newsgroup but for any newsgroup. I wonder how many posters know how to restrict distribution with their news readers. I have a key programmed to 'POST/HEADERS' but when I've used it in the past, I've found that others have followed-up to world to be followed by queries asking what the original post was about. I've got no problem going back to my 'POST/HEADERS' key, but I wonder what others think. I kinda like the traffic myself. I guess this topic isn't suitable for futher discussion in this newsgroup, though.

It is true that Renewals don't suffer the self-discharge of
NiCds, and thus, having a set as a backup may not be a bad idea.
Incidentally, NiMH cells have a real bad self-discharge for those
of you eyeing those type of cells.

Some Renewals do internally short -- Ray-O-Vac claims that they
are defective and will be replaced.

> The down side is they ain't worth squat in high-current
>applications. If you *must* ALWAYS run your HT on the highest power

>a DJ-580 on medium and low power, even accidentally leaving it on
>overnight *after* heavy use that day, and it was still working the
>next day.

Well, the last time I talked with the engineers at Ray-O-Vac,
the internal impedance was around 330 milliohms, or 2 ohms total
for a six pack. So, on a 1A load, you lose 2 volts in the cells,
which would bring the terminal voltage down to about what NiCds
will be.

I think the issue is whether the cells will be able to supply the
current necessary when you need it. I usually run low power, but
sometimes I need the high output. Otherwise, why would the HT
manufacturers bother putting in a high-power amplifier?

However, even at 1A, you get about as much voltage as a Ni-Cd,
so the hit isn't that severe.

> They cannot be quick-charged (which tends to mean an early grave
>for ni-cads if done often).
> Many rigs can charge the ni-cads while running off of 12 volts from
>the car. Renewals won't do this.

Yeah, this is the big bummer. Ni-Cds can be quick charged with little effect on cycle life if done properly. If people would use the same care in charging Ni-Cds as Ray-O-Vac does with their Renewals, NiCds would last 500 cycles with no problem. Most quick chargers end up frying the cells, which will mean an early grave.

Well, OK. My initial statement may have been a bit strong. Perhaps in cases where most of the work is standby with low power transmit, then Renewals would be OK. However, at $1.25 to $1.50 per cell for 25 cycles, I find them much more expensive than NiCds. One place where Renewals would be really nice is in D-cell flashlights. You get the full 1.5V plus, its hard to find reasonable priced REAL D-NiCds (not the mostly air sub-C ones). (Rat Shack doesn't count as reasonably priced :-) Haven't done this yet.

I guess the last advantage of Renewals is that they don't contain cadmium, so it's "green" for what its worth.

-Ken

interfering with your simplex transmissions how far do they have to be from you officially?
Just windering.....

Zero point zero zero miles. There is no interference free guaranteed
zone for co-channel or adjacent channel operations in amateur radio.
Unlike broadcast, amateurs aren't assigned a specific frequency, and
are expected to use frequency agility to solve interference problems.
That's not always practical, especially with repeaters, so there are
some voluntary bandplan guidelines, but they don't have force of law.

In some parts of the country, channels are on 20 kHz centers, and
in other parts of the country channels are on 30 kHz centers. Stations
operating on such separations *shouldn't* interfere with each other
if the transmitters and receivers of all parties are adjusted correctly
and signal strengths are comparable. If the off channel stations' signals
are markedly stronger than the one's you are attempting to copy, you
may still get interference. That's the way it goes with amateur grade
equipment.

If the standard deviations are used, and optimal receiver filtering
is used, stations of equal power separated by 20 kHz *should* be
compatible. But that's rarely the case. That's partially why some
parts of the country prefer 30 kHz channels (though in practice
they may use 15 kHz splits which almost certainly can cause co-channel
problems).

It seems my news reader is some what erratic. I am considering buying a late
model ford Tarus I would like to run 100 watts on 2 meters and 300 on HF.
Are there any problems I should be aware of??

Thanks
Gordon AB5DG

True Story!

One Saturday afternoon I was driving down Main Steet in Humble, Texas. At a rather interminable red light I happened to glance at the license plate attached to the car in front of me; it was a ham radio license plate. At that moment I honked CQ on my car horn and the gentleman in the car in front of me waved his hand in the rear-view mirror. When the traffic began to move he pulled into a parking lot where we had a rather enjoyable eyeball QSO. We are now friends and honk CQ when we see each other on the road.

Side note: I wonder If he would of been a no-code ham he probably would of thought that I was a crazy dirver wanting him to move out of my way!

Dear Contesters,

VPED ver 1.05 voice pile-up trainter for IBM-PC + Sound Blaster has
been released by JE3MAS MasIII Hiroyuki Kozu. This is a phone version
of PED. Enjoy phone contests and DX-peditions in virtual world, and
don't forget to call us in the real WW phone!

*--- *- ***-- --** --- ****
masa JH3PRR // Mt.RF JA3ZOH
*--- **** ***-- *--* *-* *-*
How to obtain VPED?

[FTP] You can always get the latest version of VPED by anonymous ftp
from the primary archive site;
hostname: qed.laser.ee.es.osaka-u.ac.jp
IP address: 133.1.140.211
directory: /pub/radio/vped
filename: vped105.zip (ver 1.05, for example)

[Mail] You can also get VPED by mail. Send mail

To: ped-request@qed.laser.ee.es.osaka-u.ac.jp

with body lines,

get vped105.zip.uu1
get vped105.zip.uu2
get vped105.zip.uu3

to get vped105.zip.uu1 through vped105.zip.uu3 from which you can
reproduce vped105.zip. See instructions given at the beginning of the
first file. If you don't have UUDECODE or UNZIP, see the Appendix.

How to exchange information about VPED? (PED Mailing List)

Other useful commands you can mail to the above address include;
help (help for available commands)

index (index of available files)
info (info about PED Mailing List, PED, and VPED)
subscribe (subscribe to PED Mailing List)

We have created the PED Mailing List for PED/VPED users to help each other, exchange information and share knowhow. You are welcome. The author is also subscribing to the list and communicating with the users, but he is NEVER OBLIGED TO SUPPORT users in any sense.

The manuals probably need improvements. Your feedbacks are welcome. Send them to PED Mailing List <PED@QED.LASER.EE.ES.OSAKA-U.AC.JP>.

VPED would be much real if you can use voices from nine different persons. The maintainer of PED archive is planning to make a common place to exchange your VD files. If you don't mind, please contribute your own VD file to the archive. The announce will be made when the place is ready. Stay tuned!

Appendix: How to obtain UUDECODE and UNZIP?

If you get PED/VPED files by mail, you need UUDECODE. If you don't have it, you can get it by sending mail

To: ped-request@qed.laser.ee.es.osaka-u.ac.jp

with body lines,

get uudecode.doc
get uudecode.dbg

Save UUDECODE.DBG on your DOS and feed it to DEBUG (which should be on almost all DOS) by typing

DEBUG < UUDECODE.DBG

This will make UUDECODE.COM in a minute.

Just in case you don't have UNZIP, you can get it from the same place in the same manner with the body line,

get unzip51x.zip.uu

>for two tone decode but the GE dealer does not know what the tones are. I
>know I need FM and ND but I guess these are Motorola designations and the
>tech programming my radio needs the actual tones. Might anyone out there
>have this information?

Bob: While I was a fireman I collected five of those huge `Quik-Call'
tone generators. They used 60's technology - huge tone reeds and a
vacuum tube for each reed. The original Quik-Call system used a 2 + 2
format: two tones sent together followed by two other tones sent
together; Quik-Call II uses a 1 + 1 format: single tone followed
by another single tone.

If you need to decode FM-ND then it looks like you're referring to
the 2 + 2 format.

Note that your fire agency, by sending just MN together can alert
all stations at the same time. The two middle letters are called
the `group call'.

What I need to know is the tone series; Motorola had three series or
groupings of tones: the A-series, B-series, and Z-series; most fire
agencies use Z-series. Find out which tone series your agency uses.

You'll make Motorola mad if you write `Quick' instead of `Quik' :)

Bill, could you please explain your remark? I interpret it as meaning
that building equipment (which at one time was the only way of getting
on the air) is somehow inferior to being able to buy on credit, unpack
the box, plug it in and yak. Did you really mean to imply this?

What I build might not be very pretty but I'm proud of them.

>sign would have been spit out. Ideally, THIS is the way it should be.

The direct interaction MIGHT get around the fact that the VEs would be handing out callsigns (law requires FCC to do that), since the license would be coming from the FCC electronically.

Of course you would not mind the examination fee being raised to $25 or $50 per exam so that VE teams could recoup the cost of the computers, right? We who serve as VEs certainly would like to find workable ways to cut down license delays, but keep in mind that we are volunteers. My team does contribute our own pens, paper, etc., but don't necessarily have a laptop computer handy. Many of the test sites have no phones. Sure we could use cell phones in some places (where there is cell phone service), but that can cost quite a bit, and data over cell phones is not the best...

>
>A good idea, terrible implementation.

>

Agreed. The instant licensing scheme the FCC proposed was really dumb.

Others suggested giving the VE teams blocks of callsigns, but that gets into the problem of the VEs or the VECs acting as licensing agencies, which apparently would require changes to the law (not to mention having possible negative side effects).

I know someone that has purchased these batteries and has been very pleased. His tests seem to show that they have about 80% the capacity of regular alkaline batteries. He mentioned that the would last for about 25 cycles.

I don't know if this helps, but this is what he reported to me. I can't comment on them personally.

Good luck, dino

The following is a QST

Hams react in the wake of a major earthquake disaster in Columbia, punitive action seems likely in the alleged California VE testing scam and the FCC reacts on appeals two a pair of fines. Find out what Washington did on Newsline report number 879 coming your way right now!

(*****
US HAMS AID IN COLOMBIAN QUAKE RELIEF

Hams in South Florida operating under the banner of the Sociadad International de Radioafficianados are working with hams in Columbia to provide emergency communications for relief efforts in the wake of a violent earthquake that shook that nation at 3:47 pm local time on June 7th. The quake which registered 6.6 on the Richter scale shook the city of Bogota, the Province of Canca, and

Neiva for a period of about 25 seconds. The epicenter was located in the zone of Torino in or about 6 to 10 kilometers in depth. Initial reports said that the trembler killed at least 64 people and left up to 500 missing. Those numbers rose sharply in the days following the trembler after it was discovered that the area near the quakes epicenter had caused mud-slides and many people are presumed drowned.
Estimates of the final toll from the disaster, which hit the remote Paez river valley about 180 miles from Bogota varied wildly because of the difficulties in reaching the area.
The shanty towns of San Jose, Santa Martha, and Mosoco were completely wiped off the face of the earth. A wall of rocks and mud destroyed the unpaved road linking the mainly Indian area to the outside world. Using Amateur Radio, local officials appealed for helicopters, medicines, food and tents to help the homeless and those hurt.
Presently, there are several nets working with Colombia quake relief. The Red Colombian de Emergencia with HK3HLR and, WA4ZZG can be found on 14.153 MHz. The Red de Emergencia de Caliy Popayan Net with HK4BTV and HK4RCA is on 7.085 MHz also serving as relief coordination stations to the area.

(*****
ACTION EXPECTED IN LA VE PROBE

The inquiry of alleged cheating and fraud in California's all volunteer ham radio testing system has taken and important new direction. One that almost certainly indicates punitive action against those accused is about to begin.
Newsline has learned that FCC Private Radio Branch Chief, John B. Johnston, W3BE, has replaced attorney Thomas Fitz-Gibbon as the lead investigator in the case. Johnston is well known to most hams as the man at the FCC who oversees the Part 97 amateur service rules. His plain language rewrite of Part 97 brought him the Dayton Radio Amateur of the Year award in 1991. In short, John B. Johnston probably understands the ham radio rules and regulations far better than any other person alive.
And knowing Part 97 this well also makes W3BE a skilled investigator in any issue dealing with regulatory violations. In fact, it was an inquiry headed by W3BE of an earlier testing fraud case in Puerto Rico that lead to numerous license revocations several years ago. This, after Johnston proved that a for profit license scam existed in that territory.
And if word on the street is correct, John has not wasted any time. The usually reliable Washington rumor mill has it that Johnston has already sent out letters to a number of applicants and suspect VE's. Letters that basically say that the recipient of the note has lied in previous correspondence with the commission. That the FCC does not believe his or her story. That telling the truth now will be easier than telling it later under oath.

The fact that Johnston is now leading the California VE probe indicates to those that know the FCC that the agency intends to make examples of those volunteer examiners who may have profiteered from the licensing of hams. While license suspensions and revocations are likely, there is now a good chance that the Department of Justice will also take up the matter. If this happens then you may eventually see some bad VE's and examinees hit with some very stiff fines or doing hard time behind prison walls, after they have their day in court.

(*****
VEC MEETING

Almost ironically, the FCC will hold its annual meeting with the nations Volunteer Examination Coordinators on Friday, June 24th in Gettysburg Pennsylvania. There will be numerous items discussed not the least of which will be tightening up overall security in the wake of the wide spread ham radio testing corruption alleged to have taken place throughout the state of California. Also on the agenda will be items surrounding question pools an testing methodology. Newsline will bring you a full report on the FCC and VEC gathering.

(*****
CONGRESSIONAL HAM

Dan Rudd, WB4PRX, an Extra class ham from the 6th district in Tennessee has announced his intention to run for congress. The June 1st W5YI Report says that Rudd, a Democrat is a physician lives Murpheesboro. He obtained his Novice ticket while still in grade school. After upgrading he was active during the Vietnam War running phone patches for servicemen overseas.
According to W5YI, Rudd is a conservative Democrat who believes that the ham radio bands must be protected from further encroachment by outside interests. Rudd also feels that volunteer examiners must be protected by federal law from any claims of liability incurred in the course of the ham radio related testing activities. If elected, Dan Rudd will be the first ham elected to a congressional seat since the retirement of Senator Barry M. Goldwater, K7UGA.

(*****
FCC CANCELS FINE

The FCC has canceled a $2000 fine issued against a Florida woman for alleged unlicensed operation. The May 1993 Notice of Apparent Liability to Monetary Forfeiture was against Margaret Taylor of Windmere Florida who had been charged with operating on 145.53 MHz without the benefit of being licensed.
According to the ARRL Letter, Taylor appealed the fine on the grounds that she should have received a warning notice before being issued the NAL. She also claimed that she was unable to

pay the forfeiture due to her age and financial condition.
The FCC said that Taylors response was more than satisfactory.
It issued an order canceling the fine because of the proof Taylor supplied, the convincing nature of her arguments and that she had no previous FCC violations.

(*****
FCC UPHOLDS FINE

In another action, the FCC has upheld an action against Joseph Sawchuck, W3OLN, of Pompano Beach Florida to cancel his Commercial license and to fine him $5000. Sawchuck had served as the sole radio operator on the vessel Patriot. The FCC regulations require at least two radio officers on board unless the radio officer has received a service endorsement to his First Class Radiotelegraph Operators Certificate. Sawchuck did not have this endorsement but had argued that the fine imposed was to high in light of the FCC's downward adjustment criteria. Without comment, the FCC denied the seventy-six year old Advanced Class operators appeal.

(*****
FCC CLARIFIES NEW DIGITAL RULES

In response to a request from the ARRL and inquiries from others, the FCC's Private Radio Bureau has clarified new rules that went into effect on June 1, 1994. The new rules do not remove the restriction against automatic control of digital and RTTY transmitting below 50 MHz.
The new rules, resulting from action in PR Docket 93-85, relax the Amateur Service rules regarding the responsibility for the content of messages on high-speed digital networks. The Commission amended Section 97.109(e), to allow a forwarding station in a message forwarding system to be automatically controlled while transmitting third party communications.
But, the Commission pointed out in a June 2 statement, Section 97.109(d), which was not amended, still limits automatic control of stations transmitting RTTY or digital emissions to frequencies above 50 MHz.
The FCC currently has under consideration two petitions for rule making, RM-8218 and RM-8280, that address this subject. The petitions were submitted by the ARRL and by the American Digital Radio Society.

(*****
SENATE CONFIRMS TWO FCC MEMBERS

The Senate has confirmed Susan Ness and Rachelle Chong as members of the Federal Communications Commission. The action came Thursday night by voice vote. Ness is a former media investment banker with ties to the Democratic Party and President Clinton. Chong, a Republican, is a telecommunications attorney from San Francisco.

(*****
AMBASSADOR AWARD

Advanced Electronic Applications has named Jim Stafford W4QO as the winner of its 1994 Amateur Ambassador Award. Stafford was selected as this years winner based on his work with the Radio Active Schools program in the Atlanta Georgia area. Radio Active Schools provides teachers and students with a chance to get hands-on experience in electronics and science through the use of Amateur Radio. W4QO has also been instrumental in helping several teachers to become licensed hams.
Jim Stafford W4QO received the Amateur Ambassador Award along with a check for $1000 at the ARRL National Convention in Dallas Texas.

(*****
STS-60 RESULTS

The folks who sponsor the Shuttle Amateur Radio Experiment flights have some good news. They report that the robot packet station counter aboard the STS-60 mission back in February clicked over more than 4000 connects with amateurs on the ground.

(*****
COPYRIGHT WIN

Software developer Brian Beezley, K6STI says that he has settled copyright infringement actions against two CD Rom distributors. According to Beezley's May 24th press release, two companies have signed --- and we quote -- "have signed agreements to cease and desist from unauthorized distribution of copyrighted antenna analysis and optimization software written by K6STI" -- end quote.
Beezley says that he has now been forced to copy protect his latest software releases. K6STI adds that he hopes that news of this legal action will make the overall software market a safer place for the products of all software writers, especially those serving the Amateur Radio marketplace.

(*****
DX - CHAD

In DX, word that yet another new station has shown up from Chad signing F5LGF/TT8. No other information is available at this time other than the operator's name is Chris. This station has only been heard on 20 meters CW between 20:00 and 22:00z.

(*****
DX - ANGOLA

Antonio, D2EGH, says that he will be signing D3X for the next three weeks. There was no reason that was given for the special callsign, but his daily activity has been on 14.195 MHz, between 20:00 hours and 01:30 UTC. You can QSL D3X via CT1EGH.

(****
YOUNGEST DXCC RECORD

Also word that nine year old Casey Haley, AB5RG has received
has made DXCC. Casey, who lives in Houston Texas received his
DXCC certificate in mid April. He is believed to be the youngest
person ever to attain the DXCC. Casey was also a speaker at the
Dayton Hamvention Youth Forum on Saturday April 30th.

(*****
NEW CARY / THIRD HARMONIC

And finally, our congratulations to Dale Cary, WD0AKO and his
wife Kay on the latest addition to the family. A baby girl named
Jamie Alexis Kay Cary that arrived at 5:55 pm on Monday, May 23rd.
Jamie weighed in at 7 pounds 2 ounces and was 18.5 inches at
birth. Dale, who volunteers his time to post Newsline scripts on
various ham radio and public bulletin board networks like Genie
tells us that Jamie's older siblings Alyssa and Briana are both
proud big sisters.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 18/2330Z JUNE 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 18 JUNE AND FORECAST UP TO 21 JUNE

No IPS Disturbance Warning is current

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 078/017

1B. SOLAR FORECAST
19 June 20 June 21 June
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 076/014

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 17 June
Learmonth 10 3322 3222
Fredericksburg 15 10
Planetary 15 09

Observed Kp for 17 June: 1223 3332

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
19 Jun 15 Quiet to unsettled.
20 Jun 20 Unsettled to active.
21 Jun 20 Unsettled to active.

2C. MAGNETIC COMMENT
Coronal hole related disturbance expected on 20-21 June.
3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

18 Jun normal normal normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
19 Jun normal normal normal
20 Jun normal normal normal-fair
21 Jun normal normal fair-normal
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values to 15-20% enhanced.

Observed T index for 18 June: 50

Predicted Monthly T Index for June is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
19 Jun 40 Near predicted monthly values to 15% enhanced.
20 Jun 35 Near predicted monthly values.
21 Jun 30 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Strong Sporadic E observed at times.

4203. 10m repeater frequencies

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-19 05:19:51 UTC
From: jsalemi@doghouse.win.net
Message-ID: <310@doghouse.win.net>
Source record: 264862

Some folks sent me mail asking for the 10m repeater frequencies, but for some reason or another some of my mail replies got bounced back as undeliverable. So here's the frequencies:

(Input/Output)
29.520/29.620
29.540/29.640
29.560/29.660
29.580/29.680

Of course they're all FM, so you need an HF rig with FM and split capabilities to use them.

I still subscribe to the theory of "who really cares?". Surely after that argument is finished, they'll have to start the argument of whether it is pronounced "seventy-three" or "seven-three". I don't even wanna be NEAR the computer when that debate starts.. <grin>

No joke! I worked at a radio station and answered the phone with MY callsign
instead of the station's callsign quite a few times...

I've almost "signed off" at the end of phone conversations with non-hams. That
would have been IMPOSSIBLE to explain!

Or have you ever meant to say "okay" to someone, but mistakenly said "QSL"?
Very embarrasing... :)

I have to agree that simplex is a lot more fun than repeaters. Of course repeaters have their place in the grand scheme of things, but it isn't nearly as much fun as trying to work simplex and the conversation isn't nearly as likely to be jammed by some pinhead with nothing better to do. As near as I can tell so far, there are about three regular jammers in the area and two seem to be using HTs. At first they got frustrated because we can so easily get over the top of them so they started using random DTMF sequences to jam the conversation. Even so, they aren't very smart about it and can be easily gotten around. The bottom line is that I have yet to hear any of them trying to jam a simplex frequency. I doubt their fragile egos could survive trying to jam simplex with an HT though.

>7.42

Here in Kentucky it's 15KHz, and I know what you mean about people generally rag-chewing on 146.520. I don't consider it a 'pet peeve' but I do keep in mind that 146.520 is a calling frequency -- make your call, then move on to another frequency.

Here's my pet peeve and it happens all too often, most notably at the Dayton HamVention this year. Overheard on a wide-area repeater in Dayton:

"WB9VVV WB9XYZ"
"Hey, where are you?"
"I'm over by the concession stand next to the flea market area."
"I'm over in the tented area trying to find you. You find any good deals yet?"
... blah blah blah for 15 minutes ...
"Hey, you guys ever hear of simplex?!?! WB9ABC"

Why in the world anyone wants to use a wide-area repeater (or any repeater for that matter) when they are no more than 30 yards from each other is beyond me.

>cell phones in some places (where there is cell phone service), but that
>can cost quite a bit, and data over cell phones is not the best...

I have to agree, and this is the same argument I've used locally about having the VEs electronically submit applications. While some VE teams may be able to afford a computer and a modem, it certainly doesn't apply to all VE teams. And while having the VEs submit electronic forms to the VEC within 48 hours would get around the problem of not having access to a phone at the testing site, it still doesn't get around the monetary problem of buying the necessary equipment.

On the other hand, I don't see any reason the VECs could not file electronically - for what it's worth.

I also agree that instant licensing as proposed by the FCC was really dumb - a logistical nightmare of infinite proportion. I can visualize the numbers of people jumping on the air for the first time: "Hi, this is VE7GBT and I just passed the Technician test today." . . . "Funny, I don't remember any VE7GBT being issued a temporary callsign today."

I always thought that their was some type of low voltage put down
railroad lines to check for continuity, or for signaling?

Another real outrage is over the Restricted Permit, which currently
costs $35. After the 5th, having them merely stamp a permit which
you fill out and send to them will cost a truly exorbitant $105.
Anybody think people will get $70 more service out of the FCC?

If you want an RP or just think you might, better get one now.

The IF output is 10.7Mhz at -80dbm. The TV video adapter has the necessary
electronics to boost it to useable levels for the TV converter. You'll
want to the 455Khz IF section and open that up, assuming you're trying
to get the approx. 50Khz wide low orbit WESAT's...

RB 331 MGT Successful RACES Units 1/3
RELEASE DATE: June 20, 1994

Successful RACES units display or have the following
characteristics and attributes:

1. Administration of the program by staff oriented to management,
not technical work.

2. Active involvement of the program participants in the on-going
week-by-week, or day-to-day, life and affairs of the agency.

3. Careful selection of the Radio Officer for skills of
management and vision as to the utilization and capabilities of
the program.

4. Acquiring the special know-how that enhances the use of a
volunteer program.

5. Asking for help, whether in procuring the right Radio Officer,
preparation of written position descriptions or general statement
of standards and expectations for participants.

6. Requiring ongoing training and participation in emergency
services nets using agency facilities for operator
familiarization and equipment testing; such as the State OES
nets.

7. Expecting program participants to equal or excel over that of
paid staff.

8. Realization of the importance of a communications reserve
under agency direction. A constant complaint from those involved
in emergency response is that "communications always fail" when

least expected, and when least prepared for that happenstance.

9. Activating a portion of the emergency communications unit personnel at anytime that paid staff is involved with a potential or exiting emergency.

10. Train participants not to mention government frequencies on-the-air as they may be confidential. Instead refer to the channel number if required to change the frequency. Also train to refrain from making comments on-the-air pertaining to public safety such as police or fire communications overheard on scanning monitor receivers.

Suggested by an article in the County of Orange RACES publication, "NetControl".

RACES Bulletins are archived on the Internet at ucsd.edu in hamradio/races or in hamradio/packet/tcpip/incoming and can be retrieved using FTP. The opinions stated are those of the author of the bulletin and not the poster.

Source record: 264869

>Bill, could you please explain your remark? I interpret it as meaning
>that building equipment (which at one time was the only way of getting
>on the air) is somehow inferior to being able to buy on credit, unpack
>the box, plug it in and yak. Did you really mean to imply this?
>What I build might not be very pretty but I'm proud of them.
>Jeff NH6IL

sure. homebrew is one thing. what you tended to see in the typical promotional blurb of the day was something that might make a long time ham have an orgasm but for someone looking into getting license it was overload - "I gotta have a 75 foot tower, a stack of monoband beams and a Whole Roomful of equipment just to get on the air?.

it was sorta like that old "stay in school" PSA that broadcasters ran to death. when it was new, it was to show that if you stayed in school and got your diploma you'd get a nice car, nice clothes, etc. the only problem was it was never updated so that by the 70s it made it look like if you stayed in school you'd get a '63 Corvair for your trouble and have to wear very uncool clothes...

that was the problem with the "would you like to talk to the owner of this fine station in japan?" sort of pictures. it would be more effective to show a modest, modern looking station (here's the radio (say a TR-3), outside, here's the wire antenna...). the old old film "the world of amateur radio" i think it was called, did the same thing. we start with roy listening to a CB and then we do a truck and pan to another station with twin CX-7A's, linear amps and a "christmas" tree a mile high outside...."the new world of amateur radio" was better yet, and i think the CQ video tapes are pretty much right on (although the animator did use a KWM-2 as the model for the opening credit animation...not that I'M complaining, mind you...)

there's nothing wrong with showing a station that's filled to the rim as well. but it's got to be prefixed with something like "Fred's been a ham since 1970 and in his 24 years in radio has acquired quite a collection of equipment - and it all works too!".

so it appears the FCC is doing this....no complaint here.

will take the wind out of some of the blowhard's sails..

maybe i missed it, but i don't think there's been anything on westlink, newsline, ARRL Letter, ARRL bulletin or other news source that i've seen yet.

would seem like a natural to also include instructions for those with code credit who want to have a real license that shows passing code on the license instead of holding onto the CSCE for life or the next renewal...

4220. Kenwood TS-450S/AT or Yaesu 890 w/AT -- HELP!

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-19 18:33:49 UTC
From: adamsr@umcc.umcc.umich.edu
Message-ID: <2u232d$hus@umcc.umcc.umich.edu>
Source record: 264871

After about 8 years off the air, I will (finally) be able to set up a new hf station this week. Since I _have_ been off for so long, I've lost touch with the equipment marketplace and given a _very_ tight budget ($1650 to get on the air, complete), I could use some rather up-to-date advice. I'll be making a purchase by Wednesday, so even brief comments would be greatly appreciated--as would an email copy of responses here (since I receive my email via uucp link, but haven't as yet started receiving a feed of the rec.radio.amateur.* groups and must log onto the university system to read the news here which can make for delays in receiving messages).

I've been offered an excellent package price on both the Kenwood TS-450S/AT (new) with built in tuner and on a (floor demo) Yaesu FT-890 with built in tuner. I've seen (and heard) a TS-450S/AT before--but since I live in the middle of nowhere (i.e., rather far from any ham shops), I haven't had a chance to see or hear the Yaesu (which is slightly better priced at $1160). My primary concerns are signal quality and flexibility (i.e., buzzes and whistles). The antenna tuner is pretty much a "must" since I'll be running a relatively poor antenna system (the reason I haven't been on hf has been antenna restrictions). Functionally, my only antenna choices are verticals (I'm looking at the Butternut HF9VX or the MFJ-1798--feedback here would be appreciated as well). A ground plane is out of the question (I'll have to "hide" the antenna between two pine trees, mounted at ground level, to be acceptable as it is--aren't mobile home parks great?), so a really good match is out of the question. I could, of course, use a seperate tuner (MJF-948?), but if the rig I buy has a built in option, I would rather take advantage of it (suggestions for rigs w/o that option are appreciated).

Overall (and if someone knows of a better deal--new or store demos--a message would be GREATLY appreciated) my budget will be spent on either of the two rigs (with a bit more left with the Yaesu, but not enough to matter if the Kenwood is a better rig in the opinion of current users) coupled with the antenna, an Astron RS-35A, 100' of coax, and the shipping. I haven't looked at ICOM or other brands, since the best offers seem to have been on the Kenwood and the Yaesu--but I certainly wouldn't turn down a 737 at a good enough price to package it with the rest at $1650 :)

I'm also very willing to consider a used station at that price, provided it represents a good value and is (ideally) located somewhere I can see/try it before purchase.

Any thoughts, comments, or opinions would be extremely helpful. My primary focus is phone, but cw quality has _some_ importance as well since I've promised myself to get my code up to 20wpm in time to upgrade to extra when my current license expires in early 1996 and that will take a _lot_ of listening. Pointers to online accessible (sorry, no access to back issues of

the ham magazines in my area) reviews or subjective evaluations would likewise be helpful--as would pointers to particularly helpful mail order sources (my best prices so far have come from the Ham Station and Radio Center, USA).

Thanks in advance,

73 Rick KE8HH

SB DX @ ALLBBS $OPDX.163
Ohio/Penn DX Bulletin No. 163

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 163
BID: $OPDX.163
June 20, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DF4RD, DL7VEE & DXNL, YV5KAJ, KR4AQ, Harris Amateur Radio Club (newsletter), AD1C, NX1L, KJ4VH, N6MZ, K8PYD and VE3UOL for the following DX information.

1Z9A, MYANMAR. This station has been active for many years, but does not count for DXCC credit. 1Z9A was heard on 14201 kHz around 1500z. QSL via AA6BB.

3V, TUNISIA (RUMOR OF THE WEEK). There is a rumor going around stating that 9K2CS may be traveling to 3V-land to operate. The rumor also indicates 9K2CS already has a valid Tunisian license.

9M8, EAST MALAYSIA. Johny, 9M8DB, located in Miri, has been quite active on 20 meters SSB (between 14180 and 14226 kHz). Look for him between 1300 and 1500z.

BS, SCARBOROUGH REEF (HUANGYAN DAO), SOUTH CHINA SEA. The following has been edited and excerpts used from a press release by Tim, KJ4VH: Scarborough Reef is a coral reef located in the South China Sea with only limited land area above surface at high tide (15.07N, 117.51E). The reef is claimed by The People's Republic of China (PRC), and the DXpedition team feels that it meets the current DXCC criteria of 225 miles of open water from the PRC mainland. No other country disputes the PRC's claim to Scarborough. An application for separate DXCC country status is pending, and it is assumed that it will be taken for a vote after the first successful DXpedition is completed and fully documented. A multi-national effort has been organized by The Chinese Radio Sport Association (BY1PK) together with JA1BK and OH2BH to activate Scarborough for the first time. The initial operation will be manned by BZ1HAM, DL5VJ, DU1OLG, DU1RAA, JF1IST, KJ4VH, OH2BH, OH2MAK and 9V1YW during the weekend of 24-26 June 1994. The special call sign BS7H has been issued for this operation by the Ministry of Posts and Telecommunications of the PRC, and landing permission has been granted. Operations will normally be conducted

on the following frequencies:
CW: 7005, 14025, 21025, and 28025 kHz
SSB: 7045, 14195, 21295, and 28395 kHz
However, in an effort to minimize impact upon U.S./Canadian Field Day activities, the following alternate frequencies may be used during openings to North America after 1800Z Saturday:
CW: 7001, 10101, 14001, 18069, and 21001 kHz
SSB: 7045, 14140, 18120, and 21190 kHz

QSLs will be managed by W6CF, via his Callbook address. Because of the uncertainties involved, the first operation may be conducted during only very limited hours on 24-26 June, and is subject to reasonable weather and the assumption that the team is successful in entering the lagoon of the reef. The transportation to Scarborough will be by 70-foot Papua New Guinean flag vessel currently involved with oceanographic research work in the Philippines. The vessel is under command of an Australian captain and crew, and is equipped with two zodiacs and out-boards.
JF1IST, coordinator of the historic Okino Torishima (7J1) operations and logistics will accompany this operation to draft all necessary plans for additional safety features and construction that might be needed for a full-scale operation. The planned construction may be built not only for the safety of future Scarborough operations, but also as a base for diving activities at these colorful reef formations.
The operation is supported by NCDXF, INDEXA and CQ Ham Radio Magazine of Japan--two Yaesu FT-990 transceivers will be used with Cushcraft R5 and R7 antennas. BS7H/MM will be QRV en route to Scarborough Reef (14.195 MHz). As is often stated in DX, the DX community should be prepared....
73, The South China Sea DX Team
Editor's Note: A full printout can be read on the BARF-80 BBS online at 216-237-8208 14.4k-300 8/N/1 (Read bulletin number 20).

C9RJJ/C91J (QSL MANAGER CHANGE). Effective May 20, 1994, W8GIO is no longer the QSL Manager for both of these stations. Their new manager and address is William Loeschman - N5FTR, 717 Milton, Angleton, TX 77515. W8GIO is the QSL Manager for C9RDM, C91S and C91W.

ET, ETHIOPIA. A couple of stations were active this past week. ET3YU was heard on 21314 kHz around 1400z (working JAs). QSL to P.O. Box 60349, Addis Ababa, Ethiopia. Syd, ET3SID, was heard on a 14256 kHz DX net around 1745z. QSL to Syd T. May, POB 60222, Uneca Addis Ababa, Ethiopia.

FO0AKI AND FO0MIZ. Nao, NX1L, informed OPDX that Kan, JA1BK, and himself made a total of 5280 QSOs on the Austral Islands and 5000 QSOs on the Marquesas Islands. The Marquesas ended earlier than planned because Kan was feeling ill, so they returned to Tahiti (later Nao went to the Australes alone and operated). A petition for new country consideration is being prepared by Nao and will soon be submitted to the DXAC. QSL FO0AKI via NX1L and FO0MIZ via JA1HGY.

PJ7, ST. MAARTEN. Eckhard, DL1BLK, and Wilfried, DL6BBR will be on the air PJ7/ from June 18 until July 7. They will be operating SSB only and

will be active on 14250, 18150, 21250, 24950, 28450 kHz and a little activity on 80 and 40 meters. They will also try to become FS. QSL via CBA.

ST, SUDAN. A station signing ST2AA was heard operating on 14024 kHz between 2130 and 2345z. No other details are available.

VP8, SOUTH GEORGIA ISLAND. Al (WA3YVN), Jan (WA4VQD), and one other operator will be active from Grytviken, South Georgia Island for three weeks in January 1995. The group will leave from the Falkland Islands and be transported to South Georia by the Research Vessel "The Abel-J". (ed. Now where did we hear that name before!). Their callsign will be announced at a later date. The group plans to have three complete stations with amplifiers, Cushcraft beams for 40-10m, two world class verticals for 160-80-30m. The estimated cost for this DXpedition will be $50-60,000, including equipment. QSLs will be handled by W4FRU, INDEXA, POB 5127, Suffolk, VA 23435. Donations can be sent to SGI DXpeditions, P.O. Box 2235, Melbourne, FL 32902.

YI, IRAN. Omar, YI1OM, was heard working CW on 14025 kHz around 1600z. QSL via F8RZ.

YV0, AVES ISLAND. A fax received by Pasquale, YV5KAJ, informed OPDX that there will be activity from Aves Island to celebrate the 191st anniversary of the Venezuela Navy and the 60th anniversary of the Venezuela Radio Club. The special callsign YW0RCV will be used on all modes (SSB, CW and digital) and all bands (no WARC bands). The operation will take place between the July 21-25th. QSL cards will go to IARU Bureau via YV5AJ (Please, write the DXpedition call on the envelope): Radio Club Venezolano, P.O. Box. 2285, Caracas, 1010-A Venezuela. Special Note: Please note that the Venezuela Postal office's rates have gone up about a month ago and 1 IRC doesn't cover the return postage.

ZD8, ASCENSION ISLAND. GW0FJT plans to be active as ZD8OK for six months starting August 1. His activites (bands/modes) were not reported. QSL via N8ABW.

ZL9, CAMPBELL ISLAND. Station signing ZL9RV has been active lately on the low end of 40 meters between 1000 and 1200z.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

QSL COLLECTION, an International Curatorium with headquarters in Vienna, Austria, is the world's biggest collection of about 500.000 QSLs and Awards of broadcasting stations and radio amateurs. We collect, keep archivves, research, make available to publishers, and exhibit in public verifications of radio reception from the early days up to to-day. Our voluntary work is financed and supported by sponsors all over the world. QSLs are acquired by bequests, from club stations, QSL managers, DXpeditions and individuals, sending those cards they no longer wish to keep. We also welcome declarations of dedication at a later stage and try to fill gaps by extensive monitoring and by circulating lists of missing QSLs. If you would like to help us or are interested in our activities, please ask for further information.

Wolf Harranth OE1WHC, Curator

Well Dave,

Yours is the precise, uncompromising, out of date attitude that generates hostility among amateurs. I personally resent being targeted as a child and generally resent that type of dinosaur attitude.

Language and lingo/jargon are particular to groups, not to the society as a whole. If a particular group wishes to recognize a particular form of address, then so be it.

This reminds me of the juice commercials where the town elders are crying about "moral outrage" and "abominations". Well, we are going to have our apple-orange juice mix, regardless of your objections.

Darin, N9RAJ

At least one comment on my boat name "Sea Cue" jumped to the conclusion
that I was somehow refering to a billiard cue.. NO! The first definition in
the dictionary I'm looking at says:
cue (kju:) 1. n. (theater) an agreed signal, usually a line or
word of dialog, for some action or speech on or off stage.
ALSO.. a hint meant to guide behavior.
So I wasn't thinking of "a long leather-tipped rod for striking the ball in
billiards and related games."

SB SAT @ AMSAT $ANS-168.01
1994 AMSAT FD COMPETITION

HR AMSAT NEWS SERVICE BULLETIN 168.01 FROM AMSAT HQ
SILVER SPRING, MD JUNE 18, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-168.01

1994 AMSAT Field Day Competition Announcement

Field Day is once again just around the corner on June 25th and 26th, and we are proud to announce the 1994 AMSAT Field Day competition. Last year's effort was very successful and we will be using the same special rules. The AMSAT competition is to encourage the use of all amateur satellites, including the digital satellites.

Here are the rules for the 1994 AMSAT Field Day competition.

1. ANALOG TRANSPONDERS

Each satellite is considered a separate band. All phone QSO's and all CW QSO's on a given satellite are considered separate bands. All packet/RTTY /ASCII/AMTOR QSO's are counted as CW QSO's. Phone QSO's count for one point and CW QSO's count for two points. Cross-mode contacts are not allowed. The use of more than one transmitter at the same time in a single band is prohibited.

2. DIGITAL TRANSPONDERS

Each satellite is considered a separate band. The following uploads/downloads each count as a CW contact (two points):

(a) Upload of a Satellite Field Day Greetings file.
(b) Download of Satellite Field Day Greetings files posted by other stations.

Satellite digipeat QSO's do not count for any score. The use of gateway stations to uplink/downlink is not allowed.

SAMPLE SATELLITE FIELD DAY GREETINGS FILE:

"Greetings from WA5ZIB Field Day Satellite station near Galveston, Texas with 24 participating members. All the best and 73!"

3. OPERATING CLASS

Stations supplied only with emergency power are in a separate operating class from those that utilize commercial power.

The Satellite Summary Sheet shown below should be used for submittal of the AMSAT Field Day competition results to Andy MacAllister WA5ZIB, Vice President User Services, 14714 Knights Way Drive, Houston, TX 77083-5640. Deadline for submissions is August 1, 1994.

Competition was tough in 1993 and should be even tougher in 1994. We hope this competition provides satellite operators with the practice necessary to be able to set up a ground station and effectively operate the satellites in an emergency situation. Remember that Field Day also provides a good opportunity to give some newcomers a chance at operating the satellites. Most of all, it should be a lot of fun for all who participate.

GOOD LUCK ON FD!

AMSAT Board of Directors Nominations Announced

Martha Saragovitz, AMSAT's Corporate Secretary announced June 16, that six duly executed nominations for the organization's Board of Directors have been received at AMSAT Headquarters by the June 15th deadline mandated in the Radio Amateur Satellite Corporation Bylaws.

Ms. Saragovitz listed the nominees as: Keith Baker KB1SF, Tom Clark W3IWI, John Hansen WA0PTV, Andy McAllister WA5ZIB, Lou McFadin W5DID and Bob Myers W1XT.

The Corporation's Bylaws require that ballots for the Board election be mailed to all current members by July 15. To be counted, the properly marked ballots must be received at Headquarters by September 15. The three persons receiving the most votes will be declared elected to the Board for a two year period. The two receiving the next largest number will become Alternate Board members until next year's Board is seated at its fall 1995 meeting.

The current Board members who's terms expire this year are: Tom Clark W3IWI, Joe Kasser G3ZCZ and Andy McAllister WA5ZIB. Four other Board members were elected in 1993 and are scheduled to serve until next year. They are: Junior deCastro PY2BJO, Dick Daniels W4PUJ, Bob Diersing N5AHD and Bill Tynan W3XO.

The current Alternate Board member is Joe Holman KA7LDN.

jjw@seastar.seastar.org (John Welch) writes:

>It worked better than a wet noodle, but not by much.

I don't share your experience with the IsoLoop. I've had mine up for
2 years (8' above the top of the chimney of the house), and with it
have 230 countries confirmed, won awards in both ARRL DX and CQ WW DX
contests, and have all zones but 34 confirmed. It is also _much_
quieter than the sloper I have that is fed at the base of the
IsoLoop.

While I'd much prefer a yagi, until I can change the XYL zoning laws
here, the IsoLoop is doing just fine.

Hi Darin, I think what Dave doesn't realize is that CBer's got
a lot of their funky talk from the hams. I worked 11m before there was
a CB band there and I said "73's" way back then in the '50's.

No matter how old and wise one is, there is always someone older and wiser.
So remember whatever one sews, that shall he also rip. :-)

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 19/2330Z JUNE 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 19 JUNE AND FORECAST UP TO 22 JUNE

No IPS Disturbance Warning is current

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 077/016

1B. SOLAR FORECAST
20 June 21 June 22 June
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 075/013

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled, with active
periods 09-15UT.

Estimated Indices : A K Observed A Index 18 June
Learmonth 17 3234 4333
Fredericksburg 17 14
Planetary 24 15

Observed Kp for 18 June: 3443 2322

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
20 Jun 25 Unsettled to active.
21 Jun 25 Unsettled to active.
22 Jun 15 Quiet to unsettled.

2C. MAGNETIC COMMENT
Coronal hole related disturbance expected on 20-21 June.
3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
19 Jun normal normal fair-normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
20 Jun normal normal fair
21 Jun normal normal-fair fair
22 Jun normal normal-fair fair
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values to 15-20% enhanced.

Observed T index for 19 June: 49

Predicted Monthly T Index for June is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
20 Jun 45 Near predicted monthly values to 15% enhanced.
21 Jun 40 Near predicted monthly values to 15% enhanced.
22 Jun 30 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Strong Sporadic E observed at times, obscuring the F layer at
04 and 19UT.

3039 7300 61 18% 63 0.2 8% 0.01 0.1% aus.radio

Several positive trends continue this month. Readership is up dramatically in all active newsgroups (closely following Usenet's predicted exponential growth patterns). This month, rec.radio.shortwave trades places with rec.radio.amateur.misc as the the number-one rec.radio.* newsgroup. Other newsgroups with extremely strong showings are rec.radio.swap and rec.radio.amateur.policy (meeting their respective goals of keeping for-sale messages and extended legal debate out of the main discussion newsgroup). Currently, rec.radio.amateur.equipment leads the other new rec.radio.amateur newsgroups by a slight margin, although all are roughly at the same order of magnitude. The recently-created rec.radio.scanner is slowly gaining in readership as well, its propagation having surpassed alt.radio.scanner, which it supersedes. Recently, a cancel message was sent out for alt.radio.scanner (which wasn't superseded by a forged rmgroup this time) and appears to have been obeyed at many sites (Although clearly many sites and readers consider it to be an active newsgroup according to its readership statistics, underscoring the point that alt.* newsgroups, even those superseded by valid mainline newsgroups, are very hard to remove, and those proposing new newsgroups should carefully consider the hazards of potentially junking up the newsgroup namespace with trial alt.* groups).

It is expected that the newly-created newsgroups will continue to grow in readership like previously-created newsgroups such as rec.radio.info and settle out at about 60-70% propagation. If these new radio-related newsgroups still haven't reached your site, please ask your news administrator to create them (refer him/her to the new newsgroup announcements by Dave Lawrence in news.announce.newgroups or the messages posted to the new newsgroups piling up in "junk" :-). Especially point out to him/her that cost/per-reader/per-month is significantly down in all newsgroups.

The defunct newsgroup rec.radio.amateur.packet has been rmgrouped as of September 21st, 1993, and is no longer connected to the PACKET-RADIO mailing list. Netters interested in packet-radio discussion should use rec.radio.amateur.digital.misc and the HAM-DIGITAL mailing list. Propagation and readership continues to drop in the old newsgroup, which is currently in last place among all the rec.radio newsgroups. If this newsgroup still appears at your site, ask your news administrator to rmgroup it.

Note also that the defunct rec.ham-radio hierarchy reappears this month. If the newsgroups are still active at your site, please try to persuade your your news administrators to delete them as these groups have been rendered obsolete (for well over 3 years now) by the rec.radio.amateur hierarchy.

Topics: Field day tips (For the young ham)

Field day tips and hints (for the young ham).
Field day- (my) definition (adjective) it is two days in June where a few or many hams gather and try to connect to other stations across the nation with a separate power supply and station under diverse conditions. If you would like to go to your clubs field day, there might be a few problems for the young ham. Read on if your parents are not hams. If they are hams and are going, my best of luck to you.
If your parents like others I have encountered who are not hams, they would probably ask what is field day. Ask a fellow ham to help you. My definition for field day is 24 hrs of non-stop communications, trying to sharpen one's skill in emergency communications under diverse operating conditions. The usual field day setup here in Chicagoland is a tent (or tents), with a station in each, a power generator or two (maybe 8), a few dozen hams, a bed or two, and of course food. Be strait with your parents. Tell them that field day will help you enhance your radio operating skills and resourcefulness, because field day is a time where you are tested on resourcefulness.
Now if your parents approve of you going to field day, but they ask how long it takes, tell the truth. Field day is a two day event. With setup on the Saturday morning, the kickoff at noon, the long run through the night and packing at noon the next day (may differ according to your club, void where prohibited). Your parents might be asking that it might be dangerous out there for you at field day. To tell the truth, it can be dangerous. A solution is to have one of your parents come with you. Another if one of the hams at field day is a family friend ask this person to talk to your parents. It is better to be safe than sorry. I remember the time I went to my first field day. It was cold, I was in a tent, I operated all night and as a summary, it was fun.
Field day is also a great opportunity to get your community involved. Bring your friends along to show amateur radio at its finest (if they don't want to go, tell them there will be food if there will be some, but don't try to force them). This may show what amateur radio is all about.

If this is your first field day, and you have never gone below 50 MHz, you will be in for a big surprise. Imagine a room of 10 people talking to each other (like the character Donald Duck) at the same time. That is what you will hear on every frequency below 50 MHz SSB (might be a bit exaggerated for some area's). Generally, the lower band frequencies are not this crowded. My point is that you will learn how to "filter" out each random call out there on frequency.
This is just a bit of what I have about field day. I hope your field day is a success and may you enjoy it.

Final note:
I would like to thank all for your memo's via the Internet and Packet. If you noticed that Jennie Finch N9SAK's callsign is not on the header of this report, I would like to point out that Jennie Finch has moved to another part of the United States (Rochester, New York to be exact). If you sent a message to Jennie's E-mail address or Packet address, please re-send it to mine. If you have not yet received any response from me, please re-send the message. I would also like to thank the many people across the country who has downloaded these reports onto various phone BBS's themselves.

Don't worry; according to Part 97, you sent your renewal in on time,
and can continue operating until your new license arrives. Panic if
you don't see it by the middle of July (or at least call the FCC in
Gettysburg).

I believe most railroads have switched to sensors, and don't even try
to put voltage on the tracks anymore. And there aren't any continuity
checks, or that Amtrak accident on the bridge last year wouldn't have
happened.

>On the other hand, I don't see any reason the VECs could not file
>electronically - for what it's worth.
>

I don't see the delay from the VEC teams to the VEC.
It's the FCC, *not* the VEC which slows things down.

I took my test Feb 12, and all my paperwork was submitted to the
FCC on the 26th of February. The FCC took 10 more weeks to get
it issued. 11 weeks, one day. Long wait.

So, again, I don't see where the VEC is to blame.
In all, we'd save, oh, perhaps, 2-3 weeks of time?
Maybe? And the fcc, still, would be taking 10 weeks to issue
a license in general. NOT 10 weeks altogether, but 10 additional
weeks from the time the VEC submits it.

4237. Transatlantic 50 MHz Es opening

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-20 08:54:36 UTC
From: besten@faculty.chem.ruu.nl
Message-ID: <besten.772102476@faculty.chem.ruu.nl>
Source record: 264890

Great News!!!

Yesterday, 19th june 1994, we had a great (well great...) opening
towards the States here in Europe and especially Northern Europe.

The opening started at approx. 19.10 UTC in South Germany and at
19.55 Z it reached our (i.e. the centre of the Netherlands) lattitude.

During the 25 min opening I worked 36 american stations from
the 1,2,3,4,5,8 district and a few VE3's. The opening disappeared at 20.20 Z.
At 21.45 a small opening reoccured and three stations were worked.

Although a known phenomenon to active 50 MHz DX-ers, multi hop Es to the
States at the lattitude of the Netherlands is relatively rare.
Please if you work PA's, DL's or ON's only give your grid square.
Especially during a pile-up we don't have the faintest idea where all kinds
of exotic names origin from :-) Also the name of the cat of your neighbour
is of less importance to us ;-)

People in the southern part of Holland (*sigh*) were able to
work CY9/WC9E and FP5EK (yes, the openings are that local that 15 km
make a significant difference between booming 59 signals and hearing
nothing at all. When you live in the central or northern part of
the Netherlands the opening already disappeared before you get the skip :-(((

Hope to work you on six too,

Remco PA3FYM

Please see my follow-up post which clarified the fees; they were
about $4, $6, $9, and $25, and they did not vary by license class but
only by the "action performed", i.e., application for a license, renewal,
change of address and special callsign. Sorry for the confusion.

4240. Ham Radio in WA State

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-20 12:33:39 UTC
From: turini@gdls.com
Message-ID: <2u42b3$pt2@gdls.com>
Source record: 264893

I'm relocating to Washington (Enumclaw area) and I'd like to correspond with someone in Washington about the state of ham radio there.

I noticed from a quick look in the repeater directory that there seems to be a significantly greater number of 440 repeaters in the state than 2 meters. Is this the case?

Also, if someone knows of a ham radio club in the area I'd really appreciate it.

The ham license plates has been covered here, thanks.

Anything else would be appreciated.

73's

Bill

>equipment.

Both of you seem to be working under the assumption that *every* VE team would have to use electronic filing. That's not necessarily the case. Obviously, those VE teams who have the capability would be more popular among impatient applicants than those who didn't, but that's the free market at work.

>On the other hand, I don't see any reason the VECs could not file
>electronically - for what it's worth.

It's worth about 2 weeks for the ARRL VEC. All the VE documents have to be keypunched into the ARRL computer for verification, then the *paper* is forwarded to the FCC where it's keypunched *again*. Any time keypunching can be reduced, delays will be reduced. Having the VECs submit on disk should drop the delay at the FCC to a couple of days, and moving the keypunching out to the VEs should cut the 2 week delay at the VEC to a couple of days. Add a week for the US Mail, and an application should the processed, and the license mailed and received in 2 weeks tops. That's a reasonable turnaround time.

It seems that there are so many transmission lines impedances (i.e 50, 75, 300 ohms).
Is there a technical reason for this or was it merely a development of different standards?

>-Mike Kuenne

To the best of my knowledge, your use of the radio is covered under
the license issued to your township for their use of the particular
Fire/EMS frequency(s) they are allowed to operate on. No individual
license (neither Federal or State) is required. Neither the feds
nor the state care about who actually owns the actual equipment,
although the feds do care about that the radio is appropriately
FCC approved (type accepted) for the purpose you are using it for.

Hope that helps,

I believe that if the VEC submits on paper, the FCC has to manually
process that paper... if it is electronic, then there is less paper
shuffling at the FCC. That would allow the FCC to go faster.

At least for coax, there are technical reasons. 75 ohm *air line* (actually 76.708 ohms) has the lowest loss of any impedance coax. If we replace the air with polyethelene, we have 50 ohm cable (actually 51.02 ohms). That's because the ratio of conductor diameters for lowest loss is 3.59112:1 in both cases, the dielectric making the difference in surge impedance.

When did this go into effect? I passed my 5 WPM in January. I have
received nothing from the FCC. The VEC just sent me home with the
CSCE and said they did not have to send anything in.

I believe this started in March when the FCC began accepting the new
(current) form 610 (and ONLY that form). If you were to move, say,
and submit a photocopy of your CSCE with one of your license and a
change-of-address 610, I'll bet you'd get a new license that said Tech
Plus, too.

MONDAY JUNE 20, 1994

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited distribution.

* IMPACT WITH JUPITER *
========================
JPL's Galileo spacecraft is scheduled to observe 16 of the 21 possible impacts of the fragments of Comet Shoemaker-Levy-9 with Jupiter this July, according to project scientist Dr. Torrence Johnson. Galileo is scheduled to observe 16 of the 21 possible impacts of the fragments of Comet Shoemaker-Levy-9 with Jupiter this July.

Galileo, however, won't be alone in keeping its eyes on Jupiter. Although the Galileo spacecraft will be in the best position to view Comet Shoemaker-Levy-9's impact with Jupiter, Voyager 2 and the Ulysses spacecraft will record various measurements from the event.

On its way out of the solar system, Voyager 2 will be heading south, about 6 billion kilometers (3.7 billion miles) from Jupiter, and will have the comet's impact sites in its line of sight. The spacecraft will observe with its ultraviolet spectrometer and planetary radio astronomy instrument, and numerical data will be returned in real time.

The Ulysses spacecraft, on its way to explore the sun's polar regions, will be able to make measurements of radio and plasma waves from the comet's impact from its position at about 75 degrees south of the sun's equator and about 800 million kilometers (500 million miles) from Jupiter.

JPL's Deep Space Network facility at Goldstone, California will perform radio astronomy on the synchrotron emission from Jupiter's radiation belt, looking for disturbances caused by Shoemaker-Levy dust.

[Info via Ron Baalke at JPL]

* MIR NEWS *
============
Progress M-23 docked with the Mir complex at 0618 UTC on May 24. The EO-15 commander and flight engineer, Viktor Afanas'ev and Yuriy Usachyov, will be

replaced this month by the EO-16 crew, Yuriy Malenchenko and Talgat Musabaev, who will be launched on the Soyuz TM-19 ferry ship on June 20. Physician-cosmonaut Valeriy Polyakov will remain aboard Mir. Both Malenchenko, a Russian Air Force cosmonaut, and Musabaev, a Kazakh Space Agency cosmonaut, will be on their first flights.

[Info via Jonathan McDowell]

* AO-10 NEWS *
==========
JH0OTM in Japan reports getting a strong return downlink from AMSAT-OSCAR-10 on 13-Jun-94 at 23:30 UTC. The beacon carrier on 145.810 MHz was also strong at a range of 23000 km. With signals from AO-10 steadily improving, JH0OTM is looking forward to making contacts via AO-10's Mode B transponder.

* DOVE NEWS *
==========
DOVE-OSCAR-17 continues to exercise its voice capabilities. Downlinks can be heard on 145.825 MHz FM. The following packet frame was received from by spacecraft by KD2BD late last week:

DOVE-1>BRAMST <UI>:

Greetings to attendees at the ARRL National Convention and
Education Forum from the DOVE Command Team
(WD0E)

* SPACE CALENDAR *
==========
The following is a tentative calendar of space related events for the next several weeks.

Jun 20-23 - International Conference of Environmental Systems, Germany
Jun 24 - UHF Follow-On Atlas Launch
Jun 24 - Soyuz TM-19 Launch (Russian)
Jun 25-26 - Space Auction, Superior Galleries, Beverly Hills, California
Jun 25-26 - Universe 94 Conference, Flagstaff, Arizona
Jun 27 - Ulysses, Begin of 1st Solar Passage (-70.07 degrees latitude)

Jul 04 - Soyuz TM-18 Landing (Russian)
Jul 08 - STS-65, Columbia, International Microgravity Lab #2 (IML-2)
Jul 09 - 15th Anniversary (1979), Voyager 2, Jupiter Flyby
Jul 11 - 15th Anniversary (1979), Skylab Re-enters Earth's Atmosphere
Jul 16-22 - Comet Shoemaker-Levy 1993e Collision with Jupiter
Jul 16 - 25th Anniversary (1969), Apollo 11 Launch
Jul 20 - 25th Anniversary (1969), Man on the Moon (Apollo 11)
Jul 28 - 30th Anniversary (1964), Ranger 7 Launch (Moon Impact Mission)
Jul 28 - DirectTV Atlas II Launch
Jul 31 - 25th Anniversary (1969), Mariner 6, Mars Flyby

[Info via Ron Baalke at JPL]

* FO-20 NEWS *
==============
On 19-May-94, the FO-20 command station announced that a problem exists
in FO-20's onboard computer system. The satellite's transponder will
remain in the analog mode (JA) until further notice.

[Info via Kazu Sakamoto, JJ1WTK]

4257. SoundBoard scope program

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-20 18:32:54 UTC
From: tom_boza@ccm.hf.intel.com
Message-ID: <2u4nf6$cd6@chnews.intel.com>
Source record: 264910
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.digital.misc

Can anyone tell me where I can obtain a Microsoft Windows 5Mhz Oscilloscope program that will run on my PC's sound board which supports stereo right/left channel input to display a lissajous pattern?

The reason I'm looking for this type of program, so I can attach my sound board's input, to my PK232 TNC's mark/space output, for tuning digital signals on the HF bands. Updates need to occur at a minimum of 2 seconds to make tuning functional, and the oscilloscope display Windows needs to be scaleable in size.

Tom WB7ASR...

4260. GMC Suburban and TS-50 Compatibility

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-20 18:51:49 UTC
From: jta@kilroy.jpl.nasa.gov
Message-ID: <1994Jun20.185149.29337@llyene.jpl.nasa.gov>
Source record: 264918

Good afternoon! While not a regular reader of this area I get occasional snippets sent my way by the regulars.

I own a '93 GMC Suburban that has at present inventory a TS-50 with associated AT-50 antenna tuner, a Realistic PRO-2006 scanner (25-1300MHz), a Kenwood TM-741 w/ 2m, 440 and 1.2GHz, a Yaesu FT-209 2-m handheld connected to a Kantronics KPC-3 TNC.

The TS-50 suffers very little from Sub-generated electrical interference. There is a small and acceptable amount of ignition noise that I can hear. The truck does not seem to generate too much low-frequency EMI. The antenna is left-side bumper mounted, with either Hustler resonators for the low bands 40/80 and an 8-foot whip for the high bands. The radio is mounted immediately ahead of the center console and the antenna tuner is under the front passenger seat (yes, I know the tuner should be closer to the antenna; I'm working on it...).

In terms of experience, I have run 300k+ miles with HF in diesel-powered (underpowered) Rabbits and know what quiet HF mobile performance is like. Imagine being able to detect incoming Toyotas at 2000 yards!

The TM-741 display unit is immediately under the TS-50; the radio unit is under the rear left fullsize passenger bench. The radio suffers from an intermittent interference generated by the truck on the 440MHz band. This interference is very low level but is sufficient to break squelch on the radio at generally all settings. It consists of a bunch of spurs that are very frequency-stable. One of the spurs is at 445.495MHz and my repeater output frequency is 445.500. This one annoys me especially. Other handheld 440 radios have detected the same interference but it is very dependent on antenna orientation and position. I have not made the effort yet to locate the source.

The PRO2006 went in just this past weekend and uses a coupler to share the AM/FM BCB antenna. So far, other than the lack of extreme sensitivity which I normally enjoy with this radio (due probably to the crummy antenna selection) the radio appears to behave well. Time will tell, and the antenna choice may have to change.

The KPC3 generates essentially no discernable noise except on 10m. Which is typical (for some reason) but the level of the interference is very low. I will be changing out the FT-209 2m HT for a 10m mobile radio (Uniden or Motorola if I'm really industrious) and so this is a concern for me. However, at this moment it is always possible for me to shut off the KPC3 if I need to work 10m meteor-scatter or some other very low SNR mode.

All in all I would have to say that the Suburban is quite compatible to my HF radio but that its UHF performance leaves something to be desired.

CO>mentioned that 73's was technically incorrect. But who's counting [please
CO>pardon the pun]. I would normally say propper etiquette is something
CO>learned by example not necessarily read about...but given the state of
CO>affairs in amateur radio now [at least in my vicinity] I would highly
CO>advise against that method. In my area there seems to be less and less
CO>courtesy and good operating practices everyday. This is happening for
CO>a whole host of reasons which I will refrain from right now. I guess
CO>try to make the best of a bad situation.

You got that right! My friends ask why I'm not on 2 meters as I used to be.
I too shall refrain from making any comments other than that 2 meters is
slowly becoming the cellular phone system of ham radio. I do not enjoy
listening to phone patches, husbands or wives telling each other to pick up
the kids at Grandmas, they'll be home in 5 minutes, etc., etc.! My way out
is not to turn on the rig or go simplex to chat!

4262. Astron Power Supply

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-20 19:11:06 UTC
From: biekert@inetgw.fsc.ibm.com
Message-ID: <2u4pka$l8i@eagle.bet.ibm.com>
Source record: 264913

We have an Astron 35M power supply on our repeater. Normally there is no problem, however, when there is a power glitch the power supply has a protection circuit which shuts off the power and it takes a manual throwing of the on/off switch to restore power. This means a trip to the repeater site to spend 20 seconds throwing the switch.
Does anyone know how to defeat this 'protection' circuit. Since we don't have a key to the site we have to hassle the owners at $60 a pop!

Thanks Bob KA5GLX Houston, Tx
biekert@vnet.ibm.com

4263. Nicad Batteries

Message-ID: <Crpn1w.AxC@cup.hp.com>
Source record: 264914

>At $50 for
>a factory pack, and $5.00 for a set of 6 cheapo NiCds, you
>can't lose.

The battery case gets you though!. The case for my FT-415 costs $20. The off-the-shelf Nicads do come out ahead but not by quite as much.

Question: Has anyone tried out the AA Nicads ("Infinity") at the Warehouse Clubs (Price/Costco etc.) ?. They are quite attractive economically: $8 for a pack of 8 and $13 for the charger.

Sanjay

What are they going to do about Tech's who don't have a CSCE becuase they got their license long before there was a No-Code Technician Class??

Technician licenses originally issued before that date contain assumed credit for element 1(A) (5 wpm CW test), though you might have to send a copy of an older license showing it was issued before that date.

Further, technicians licensed before an earlier date (in 1987, I forget when) have permanent credit for element 3(B), the General written test, and can therefore get a General just by passing the 13 wpm CW test, since before that date Technicians took the same written test as Generals.

APRS Newsletter 1 of 2
June 12, 1994

It has been a long time since the last issue went out of the APRS newsletter so I thought I would throw together a little something and see if we can get the mail flow going again since Dayton. It was at about the time Dayton was over that all of the APRS mail for both the newsletter and in general messages to APRS@USBBS almost came to a complete halt. This by no means seems to be a sign that interest is droping off, on the contrary I seem to see an increase on the bands, both on our local VHF Net and on the 30M frequency. While in the past APRS mail was so heavy every day I would capture to disk all of the messages to APRS in general and personally for the newsletter and read them later off line. Since Dayton I can probably count on one hand what has come in. In some ways I am lucky, in this interim I have switched to a 486DX2/66 under Windows and Word Perfect 6.0 Windows that I am still trying to learn. This "Newsletter" is more a call for articles and comments from all the APRS users out there as before so we can get the ball on the roll again. It seems that everyone enjoyed the news from other parts of the country and various ideas so let's get it going once more now that everyone that went to Dayton has had a chance to rest up. Most of what I am including in this issue is information that I have gathered from the HF net and local activity here in South Florida. I would like to especially hear from the New England Net who has not been seen for quite some time on HF and the SF Bay Area Net since we do not get much of a chance to contact them on HF due to conditions. For the local groups who do not have a HF Gateway please check in and let us know you are there and what you have going on.

Words from WB4APR

I recently spoke to Bob and he states that some stations using APRS on a 8088 in HSP mode may have some problems with the Comm port backing up with GPS data. This problem may have been around for quite some time, but no one may have tried the HSP box with a 8088 and a VERBOSE GPS till' now so this problem should be resolved soon, if not all ready for a future version of APRS. Bob and I also spoke of an idea that I had of placing objects on the actual APRS maps instead of needing to uplink them on a possibly busy frequency and worrying if a late addition on the

net does not have it on the map. Bob posed great interest in adding this to MAPFIX.BAS and hopefully will have it available on the next major version. What this will do is permit APRS users to save the various object ICONS to the actual map just as if you were drawing a new street on a pre-drawn APRS map. This will give us the ability in a emergency situation to run APRS and already have the various care centers (Hospitals, Shelters, Supply Distribution Points, Fire Houses, Police Departments) and other interest points as Airports, Hellistops, Communication Towers, Digi's, Repeaters, etc. on our map. The need to have someone bother uplinking objects and tying up the frequency can detract from other more important chores when a comm point is first mobilized. Bob also stated that over the Memorial Day weekend he completed quite a number of new ICONS that should be in the next upgrade of APRS. This should work well with the new idea of drawing local specialized maps. Well it's that time of the year and the USNA cadets are out in training. If you would like to see them in "action" tune into 6260 MHz or 5250 MHz but REMEMBER TO DISABLE YOUR TRANSMITTER!! this is not an amateur allocation.

Hurricane Season is Here

Moments before sitting at the PC to write this I was attending the Hurricane Awareness presentation at the local mall which was attended by the local county EOC's and sponsored by our local ABC TV affiliate just to mention a few. Who will be the first to track the first storm of the season with APRS? As I am writing this the Tampa Bay area is posting a simulated Hurricane on APRS which is coming back to FL's East Coast VHF Net via the HF GATE. KK4XI and KD4UYR with Pinellas County are quite involved in APRS implementation and did a demonstration at this weeks Hurricane Symposium. The Palm Beach County EOC Director who is also a active ham was in attendance and impressed, now he has a copy of v5.03 in his possession after seeing earlier versions of APRS during a packet meeting held at the county EOC. Hurricanes are a concern mostly of the tropics but I would like to hear from other in the central and northern latitudes and how they have used APRS so we can pass it along to other users.

LL BBS's with APRS

If anyone is interested in getting APRS via LL modem the ARN BBS is the first place that new APRS files are posted, shall we call it the "File Server" ??? Many times the BBS will be busy especially just after a new release of APRS, so I have started posting all APRS files and programs on a local BBS here in Palm Beach County Florida. The BBS is called Ham Bites BBS and is run by Jay KD4VBS at (407) 575-9680 (DATA). The BBS is a full service board and runs 14.4K 24 hours a day 7 days a week. The BBS is not very busy at all so your chances of logging on at the first call are great and I will try to have all new versions of APRS on-line

within 24 hours of posting on ARN. For some of you it may be less expensive to call FL than MD so this is another plus, I would like to try to get this idea to spread to other parts of the country so everyone can save a few dollars and also be able to have access to the program without needing to listen to 2 or more hours of busy signals. With this in mind I am putting out a call for APRS users who are BBS sysops to send me all of the information and a "commitment" to do there best of getting the newest version of APRS on their BBS as soon as it is released. I will then compile a list of these BBS's and try to organize another level of servers for larger states which could use 2 local APRS Servers so LL costs are kept to a minimum for all. California, Florida, Texas, and New York are examples of a few states that can use a few BBS's to serve the state with APRS files. Let's start the project with an Ohio BBS that I saw some mail from.

John KB8JXO Columbus Ohio (614) 443-4249 up to 14.4K (US Robotics Users D/C Automatic Compression) KB8JXO@WB8CQK.#CMH.OH.USA.NA

APRS Newsletter 2 of 2
June 13, 1994

Other APRS Frequencies.....

Various APRS frequencies are popping up starting on HF we have 7.085 / 10.151 / 14.098 LSB. On VHF 145.79 is becoming quite a standard but I have heard of 145.01 being used in California, 145. 77 in Montreal, 147.345 in Southern NJ while 145.79 is in use in Central and Northern NJ. What frequency is being used in your area and if it is not 145.79 is there any particular reason? Many frequency coordination councils are accepting 145.79 as a standard APRS frequency and it is making the wish of .79 being nationwide somewhat of a possibility If any of you have contact with your local packet or repeater committee please see if you can initiate a proposal that 145.79 will be set aside for the APRS Network.

ARRL Repeater Directory

As many of you know the ARRL Repeater Directory does have a listing of various packet BBS's and Digi's in the back of their book. A quick look at the state of Maryland has a listing for 145.79 with Various under location and call and WIDE under notes. If you have an established APRS net in your area please make it a point to submit a form to the ARRL to so it will be listed for any traveling APRS user. An idea may be to list all the WIDE area digi's serving the state and at least what town it is in so others can have an idea if it can be reached from their location or not. WIDE under notes or whatever the alias is a

great idea and maybe the addition of a space and a G would inform others that a GATEWAY serves that digi's service area.

PacComm's Endorsement of APRS

I have recently just received the Spring edition of the PacComm Catalog and was pleasantly surprised when I opened it to find APRS as big as life! on it's front cover. PacComm in the past has been thoughtful of the APRS user and it seems that the support will continue. I have spoken to one of their code writers and passed along the idea of having the firmware understand APRS's Query command of ?APRS which it transmits upon startup. This addition to the code would permit more users to be active even without a PC and permit them to keep their beacon interval to a minimum. Maybe more of the TNC manufacturers will catch on and provide commands for APRS use on their TNC's. The more publicity that the manufacturers give APRS the stronger we will grow.

Networking APRS into a System

I am looking for suggestions and help from others on possibilities for linking APRS into a LARGE network. Here in the South Florida area we have seen a steady but slow growth of APRS. One of the problems is that interest seems to crop up between 2 or so stations and these stations seem to be just a bit too far from the others to maintain a reliable link all the time. One of our specific problems is that we do not have any "man made towers" and to get any decent range on VHF/UHF we must have access to towers of significant height. Yes, we do not have the shadow problems that other states have with high mountains but usually those mountains are a blessing since it is easier to get a site on one than on a already jam packed 300 or 500 ft. tower. A 300 or 500 ft. tower is also usually no where near the altitude that a "small hill" in some states can offer, so a "good site" for us is quite poor in some respects to our Northern and Western brothers. The way this comes into play with APRS is that we need many more WIDE area digi's to cover what in some areas can be covered with two or so. The unique problem that we face (and I am sure many other southern states will in the future) is that this makes the [UI] packet UNPROTO wording difficult. If given unlimited resources with equipment and digi's we could put up enough of them to cover the Southern portion of Florida but how do we make sure that all of the packets will make it thru the system without the need to change the UNPROTO path every time we need to go in another direction. The point of a WIDE AREA NETWORK with APRS is that EVERYONE can see what is going on and also track support/supplies on the way to and from any disaster areas. With one common network we may have a high level of traffic but after experiencing the Army/Navy Football run I am sure we can handle the traffic as long as we have some sort of control over idle chatter. This will give us the ability to assign certain UPLINKING tasks to distant APRS

stations that may not be as busy with traffic, or the task of Hurricane Position UPLINKS from the National Hurricane Ctr. in Coral Gables so everyone in South Florida can copy the 1 original position report. Any comments or help would be appreciated......

Final Comments

The HF Net has been doing well with no problems to speak of other than the summer propagation, APRS got a great boost from PacComm, growth seems to be at a slow but consistent level, and many more stations seem to be springing for the addition of a GPS receiver, we can't ask for anything more than that! I would like to hear from anyone who attended the APRS presentation Saturday night in Dayton. I am sure there was much to speak about that many of us poor souls who worked instead missed out on. I was told that a informal article was going to be written up for the newsletter but I have yet to receive it, so if someone would like to please do so. Just write it up, maintain it to 70 columns wide so I can paste it directly to the next newsletter and write it as if it were directed to everyone.

4266. contact with all CQ's

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-20 20:32:47 UTC
From: drranu@lamar.ColoState.EDU
Message-ID: <CrpqEn.1s9o@yuma.ACNS.ColoState.EDU>
Source record: 264921

I have been collecting as many CQ QSL's as possible and would
like to increase mine and aid in others'. Of course by this
I mean having a "CQ" in the call. I would be more then happy
to set up a sked with any fellow CQ'ers, or heck, ANYONE for
that matter!

Please contact me with your interest!

Yeah, but once the cells go bad, you can replace them
for $5.00 and you're off running again. The real savings
come after multiple "packs" as you don't have to buy the case
over.

>
>Question: Has anyone tried out the AA Nicads ("Infinity") at
>the Warehouse Clubs (Price/Costco etc.) ?. They are quite
>attractive economically: $8 for a pack of 8 and $13 for the

>

Yup. You get what you pay for. The cells are OK, about 550 mAh, maybe
600. They don't seem to be that durable, but hey, I get em for $7 for
a pack of 8. That's less than a dollar a cell. I've just tossed
my original set, and am running on the second set -- so far no problems.
The biggest problem is that the label falls apart easily, and that
is your insulation. Have to watch out for shorts inside the pack due to
two cells in series touching each other.

Now, DAK industries was selling Fuji cells for $15 per 12 pack, but
haven't gotten around to trying those out yet. The charger is OK.
By tilting the AA cell to touch the C/D cell contact, you can quick
charge the cells at 380 mA if you're careful.

I've been working on a windows based program to do simple pathloss predictions for VHF/UHF links. The program is still in a testing phase, but I would be willing to release it to a few select individuals that would be willing to test it against real, or other programs. Since there is no rec.radio.amateur.binary group, I will email direct to those select few. Let me know how you intend on testing it, and promise to send back your results and its yours.....

> We are now friends and honk CQ when we see each other on
>the road.

Honking is a good way of showing ham friendship. For all of the years I can remember since WWII, hams have honked " . . . . . " (HI). When dial telephones were a rage, local hams would remove and modify the dial such that it would send . . . . . when the number "9" was pulled and released. After modification, the dial was mounted behind the steering wheel on the vehicle for easy access for pulling a "9".

>mind that 146.520 is a calling frequency -- make your call, then move on to
>another frequency.

146.52 is the "National Simplex" frequency, according to the ARRL Repeater Guide and the Operating Manual.
It is not a calling frequency like 144.200 Mhz is for SSB.

I operate simplex most of the time on 2 meters. If 146.52 was a calling frequency then I wouldn't listen to it, wouldn't meet and talk to a lotta cool non-repeater people, and wouldn't have near as much fun.
Nobody listens to Channel 9 on CB for the same reason. If you want help you call on the truck driver channel.
Many years ago the group here in PDX that owns the 146.94 repeater decided to make it a "calling only" repeater. A 30 sec. alligator was installed and hams were actively discouraged from ragchewing or even chatting.
The result was that nobody listened to .94 in PDX except a select few who enforced the "silence is golden" rule. Out-of-towners who were used to finding 146.94 as a popular frequency in other cities would only find silence on the PDX .94 machine. 146.94 is the "National Repeater" frequency if you look in the guide. It is not a calling freq. A calling frequency is where people need to keep it short due to changing band conditions, long range propagation effects, and differences in station equipment affecting weak signal sensitivity.
Ham radio is for experimentation first. Let's not adopt methods that promote cliquishness.

>That's because the ratio of conductor diameters for lowest loss is 3.59112:1
>in both cases, the dielectric making the difference in surge impedance.
>
>Gary

This must be for some preset inner conductor diameter. When I work
the loss of the coax (assuming perfect dielectric -- loss only due
to skin effect), I get:

alpha = R/2Zo

where R = (Rs/2pi)*(1/ro + 1/ri)
and Zo = (sqrt (mu/epsilon)/2pi)*(ln(ro/ri))

So, for a given inner conductor diameter, there will be a specific
impedance for minimum loss, but I don't see how that ratio holds
for all sizes. Is my math messed up? Oh, Rs is the skin effect sheet
resistance.

-ken

>
>Don Trynor VE9NZ

The following is *pure* conjecture.

The ideal dipole over perfect ground at perfect height would have an input impedance of 72 ohms. So design some 73 ohm coax for a "perfect match. ;^)

Then some clown, like myself, notices that many many *real* dipoles on HF have input impedances of 50-55 ohms...so make some 52 ohm coax for a match...and, BTW, make 50 ohms the *realistic* standard termination for xmtrs.

Then someone notices the need for coax to feed a perfect groundplane... 37 ohms (pop quiz: name the designation for that coax). However, in reality, one needs one-half of 50 ohms (not one-half of 73 ohms)... so make some 25 ohm coax (yes there is)...which turns out to be well suited to direct feeding the driven element of the typical HF 3-element Yagi.

There is further justification of 73 and 93 ohm coaxes (other than being roots of minimization equations)...how about acting as quarter wave matching stubs...after all, many antennas have input impedances quite far from "50" ohms...and input impedance gives no clue to antenna efficiency. ;^)

I understand the need for 450 ohm (or there abouts) twin lead... afterall, in the good old days, real hams had voltage fed antennas for their *all* frequency capabilities...and real end fed antennas are supposed to have feed point impedances of 2,000-5,000 ohms... huh, why not twin lead of 2000 ohms? Well that is called open wire line...but 450 ohm ladder line is *mechanically* stable, practical to manufacture, and close enough for government work.

Well, where did 300 ohm come from?...Early TV and nobody really understood what was going on, but 300 ohms made the input stage design easier and *cheaper* in the fledgling TV industry....that needed as much voltage multiplication as it could get for notoriously low gain, high noise, parasitically-oscillating front end triodes.

And then there is the 72 ohm twin lead...but no 50 ohm, because the extruding machine must have some slop room if you want a run of "good" wire.

Who sez that? I say that!

Hey Ron,
How are you doing? I now have an address that works! So you and your buddy Hugh can send me more mail.

Well, was the move back worth it? Are you still having fun? Is the new job still a challenge for you?

In a nut shell, same 'ol' same 'ol around here. I'm changing stations at the end of the month. Going to Palos Verdes Estates. Less Butthead people, less runs, more time to study. I am getting ready to upgrade this system. I was thinking about a 486 DX4 100mhgz, but I don't want to melt down! So I think that I will go with a 486 DX2 66. I already put another Hard Drive in. I kept the original and added a second. I got a hold of a used, for two weeks, Conner 240 meg. for $60.00. I could'nt pass it up. That is my windows drive. I am using that to slowly make the transition from DOS to Windows. The key word is "SLOWLY". I still do not like the windows enviroment. So much of the screen is wasted on the menu and toolbars. I know, everyone tells me the same thing. Get a bigger monitor. If all of tha junk wasn't there, I wouldn't need a bigger monitor! Well, enough of that.

John bought a Flat in downtown Denver. He moved in last week. He is now truely a Denver YUPPIE. He seems to like it. He is still getting settled in. This week he is on a business trip, again. That guy spends most of his time on the road. He says that work is going well. He seems to be enjoying the whole deal. That is good for John. I got a call from Derek Roysden the other day. I haven't returned his call yet. I am kind of scared too! I'm not sure what to expect. He is now in New Mexico. I wonder if they are ready for him? No, I'm sure that he is doing good. Derek is like a cat, he always lands on his feet. Mark and Lisa are doing good. They are both having fun with the new baby. Penny and Greg are good also. The both of them are about the same and enjoying Kris. He will be 1 year old in a couple of weeks. Man, how time flies. It just seems like yesterday that I was up at your place to see Nolan. Wow, I'm starting to feel old. Just for a second.

Anyway, that's it from here. I glad that this Internet thing is working. This will be alot of fun. I will look forward to hearing from you soon. You guys take care and have a good one.

Later,

MIKEY
MIKE.CONTI@PCAPPBBS.COM

INDUSTRY CANADA AMENDS SPECIAL PREFIX POLICY

Industry Canada has announced an amendment to their policy on special prefixes. This amendment makes clear which prefixes can be authorized in which call areas. Please refer to Industry Canada document RPC-2-8-01 for details of the policy. The distribution of prefixes is as follows:

Call Area Possible Special Prefixes

VE1 CF1 CG1 CH1 CI1 CJ1 VA1 VB1 VC1 VD1 VF1 VG1 VX1 XJ1 XK1 XL1 XM1
VE2/VA2 CF2 CG2 CH2 CI2 CJ2 VB2 VC2 VD2 VF2 VG2 VX2 XJ2 XK2 XL2 XM2
VE3/VA3 CF3 CG3 CH3 CI3 CJ3 VB3 VC3 VD3 VF3 VG3 VX3 XJ3 XK3 XL3 XM3
VE4 CF4 CG4 CH4 CI4 CJ4 VA4 VB4 VC4 VD4 VF4 VG4 VX4 XJ4 XK4 XL4 XM4
VE5 CF5 CG5 CH5 CI5 CJ5 VA5 VB5 VC5 VD5 VF5 VG5 VX5 XJ5 XK5 XL5 XM5
VE6 CF6 CG6 CH6 CI6 CJ6 VA6 VB6 VC6 VD6 VF6 VG6 VX6 XJ6 XK6 XL6 XM6
VE7/VA7 CF7 CG7 CH7 CI7 CJ7 VB7 VC7 VD7 VF7 VG7 VX7 XJ7 XK7 XL7 XM7
VE8 CF8 CG8 CH8 CI8 CJ8 VA8 VB8 VC8 VD8 VF8 VG8 VX8 XJ8 XK8 XL8 XM8
VE9 CF9 CG9 CH9 CI9 CJ9 VA9 VB9 VC9 VD9 VF9 VG9 XJ9 XK9 XL9 XM9
VO1 CZ1 CZ3 CZ5 CZ7 CZ9 VO3 VO5 VO7 VO9 XO1 XO3 XO5 XO7 XO9
VO2 CZ2 CZ4 CZ6 CZ8 CZ0 VO4 VO6 VO8 VO0 XO2 XO4 XO6 XO8 XO0

VY1 CK1 CK3 CK5 CK7 CK9 VY3 VY5 VY7 XN1 XN3 XN5 XN7 XN9
VY2 CK2 CK4 CK6 CK8 CK0 VY4 VY6 VY8 XN2 XN4 XN6 XN8 XN0

Stations with CY9 (St Paul Is), CY0 (Sable Is), VE0 (Shipboard) or VY9 (Industry Canada) callsigns are not eligible to use any special prefixes.

RAC SPECTRUM MANAGEMENT COMMITTEE MEETS

Members of the RAC Spectrum Management Committee from Toronto, Barrie and the Golden Horseshoe regions met in early May to discuss the issues of bandplanning. Those in attendance represented major user groups including FM repeater, weak signal, EME, packet, satellite and FM simplex. A subsequent meeting is scheduled for June. Other user groups including ATV are expected to join in. Similar meetings are planned for other areas of the country.

Amateurs will be kept advised and are asked to submit comments and ideas which will aid in the formation of a revised RAC Bandplan for the bands above 50 MHz. Dana Shtun VE3DSS is chair of the RAC Spectrum Management Committee.

RAC AND RED CROSS ENTER AGREEMENT OF UNDERSTANDING

A memorandum of understanding has been signed between Farrell Hopwood VE7RD, President of RAC and Brian Gilbertson, National Director Field Operations of the Red Cross Society. The agreement includes appendices, which define the two national organisations, and guidelines for cooperation. The Amateur Radio Emergency Service (ARES) and the National Traffic System (NTS) and the relationship these two programs have in providing communications during times of need are explained.

Mr. Donald Shropshire, National Coordinator Emergency Services of the Red Cross, stated that he was delighted that this work, which had been going on for some time, was now complete. He stated that several times during the past five years the Red Cross has had to rely on Amateur Radio personnel for emergency communications.

The past deliberations of the late Jack Strangleman VE3GV, and more recently Larry Thivierge VE3GT, Ontario Section Manager, and Ken Oelke VE6AFO, RAC Field Services Manager, have brought about this agreement.

RAC ANNUAL GENERAL MEETING IN CALGARY JULY 30

Radio Amateurs of Canada's Board of Directors will be on hand with the National Executive to discuss the internal and external business of RAC at the 1st Annual Convention in Calgary. Directors will be available to answer questions concerning Amateur Radio activities in their regions.

The 1993 audited financial statements will be presented for discussion and acceptance by the members at the AGM and will be published in a future edition of TCA. After the AGM, members may request a copy of these statements by writing to RAC and including a stamped 9" x 12" envelope, with sufficient postage to mail 200 grams first class.

RAC HQ STATION IN IARU HF CHAMPIONSHIP

RAC is seeking Amateurs who would like to operate as the RAC HQ station in the IARU HF Championship. This contest, which takes place from 1200z Saturday, July 9 until 1200z Sunday, July 10, 1994 allows the HQ stations from each IARU member society to compete in a separate category. As well, HQ stations count as additional multipliers, distinct from their ITU Zone, and can be in great demand. The rules allow for up to six HQ stations from each member society.

If you would like to take part in this contest, either as a single operator, or if you would like to organize a group to operate as a multi-op, and you would like to be "RAC HQ for a day", contact RAC's HF Contest Manager, Dave Goodwin VE2ZP/VE9CB. You can do so by mail at 15 Oval, Aylmer Quebec, J9H 1T9, via packet at VE2ZP@VA3TCP.#EON.ON.CAN.NOAM or by E-mail at ve2zp@BBS.VA3TCP.AMPR.ORG as soon as possible. If selected, you can "borrow" one of RAC's official callsigns, with the RAC suffix. For a description of last year's event, see the cover story in October 1993 TCA.

RAC CANADA DAY CONTEST JULY 1

The next Canada Day contest is coming up soon, on Canada Day of course! The contest runs from 0000 to 2359 UTC on Friday, July 1. The CW and SSB sections of the 160, 80, 40, 20, 15, 10, 6 and 2 metre bands are considered separate bands, and you may work each station once per band. You receive 10 points for any station worked in Canada, 20 points for each QSO with a RAC official station, and two points for each station worked outside Canada. Multiply your QSO points by the total number of provinces and territories worked on each band and mode to calculate your final score.

Full rules appear in TCA, June 1994. The results of last year's contest appeared in TCA, November 1993. If you would like copies of the suggested entry, log and dupe sheets, send a SASE to RAC, P.O. Box 356, Kingston, Ont., K7L 4W2.

CW PILEUP TRAINER FOR CT CONTEST PROGRAM AVAILABLE

Computer software that emulates a CW pileup under contest or DXpedition-like conditions is currently available. The software was authored by Mas III H. Kozu JE3MAS and runs on an IBM or clone computer. The software is "freeware" and may be freely distributed.

If your PC is equipped with a "Sound Blaster" or equivalent card, you can enjoy a pileup as many as 16 deep simultaneously. The author has carefully combined his CW pileup simulator with the infamous CT Contest Logger (written by K1EA). As a result, the program is an ideal platform for learning to contest CW style, according to Andy Mitchell VA3CW.

Access the program through InterNet, try an FTP at:
qed.laser.ee.es.osaka-u.ac.jp
The file can be found as pub/radio/ped411i.zip

The file can also be downloaded by telephone from "The Other HEX-9 BBS" at (705) 835-5260. Leave a note for the Sysop to enable you to download, or drop a note to Len, VE3FJB. If all this fails, contact Andy via packet at VA3CW@VE3FJB.#CON.ON.CAN.NA, or write to him at 23 Baltimore Road, Barrie,

Ontario L4M 5M6.

CANADIAN AMATEUR RADIO HF BAND PLAN FOR DISCUSSION PURPOSES

The following band plan is being presented for discussion purposes only. It is not intended to be the final band plan, or to necessarily reflect the views of Canadian Amateurs. The main purpose for presenting it here is to get some feedback from Amateurs as to how they would like the band plan structured.

Adherence to the Canadian Amateur Radio Band Plan is voluntary. The following frequencies and modes are presented for discussion purposes. Input from concerned radio amateurs is welcomed in the formulation of a Canadian Band Plan. A final band plan will be determined prior to September, 1995. There will be a meeting for Region 2 of the International Amateur Radio Union in September of 1995 at Niagara-on-the-Lake, Ontario. This will be the first meeting hosted in Canada. A Canadian position on HF frequencies will be presented at that time.

Comments can be directed to: Patrick G. Doherty VA3GD, RAC HF Frequency Coordinator, RR1-10035 John Street Road, Murillo, Ont., P0T 2G0. E-mail: pat.doherty@oln.com. Packet: VA3GD@VE3TKA.#NON.ON.CA

160 Metre Band - Maximum bandwidth 6 KHZ
1.800 to 1.840 MHZ - CW and Digital Modes
1.830 to 1.840 MHZ - DX Window
1.840 to 2.000 MHZ - CW, SSB, SSTV and other wide band modes

80 Metre Band - Maximum bandwidth 6 KHZ
3.500 to 3.580 MHZ - CW only
3.580 to 3.635 MHZ - Digital Modes
3.620 to 3.635 MHZ - Packet
3.635 to 3.725 MHZ - CW
3.725 to 4.000 MHZ - SSB and other wide band modes
3.790 to 3.800 MHZ - DX Window

40 Metre Band - Maximum bandwidth 6 KHZ
7.000 to 7.035 MHZ - CW only
7.035 to 7.050 MHZ - Digital Modes
7.040 to 7.050 MHZ - International packet
7.050 to 7.100 MHZ - SSB
7.100 to 7.120 MHZ - Packet within Region 2
7.120 to 7.300 MHZ - CW and SSB

30 Metre Band - Maximum bandwidth 1 KHZ
10.100 to 10.130 MHZ - CW only
10.130 to 10.150 MHZ - Digital Modes
10.140 to 10.150 MHZ - Packet

20 Metre Band - Maximum bandwidth 6 KHZ
14.000 to 14.070 MHZ - CW only
14.070 to 14.095 MHZ - Digital Mode
14.095 to 14.100 MHZ - Packet

14.100 MHZ - Beacons
14.100 to 14.112 MHZ - CW, SSB, packet shared
14.112 to 14.350 MHZ - CW and SSB
14.225 to 14.235 MHZ - SSTV

17 Metre Band - Maximum bandwidth 6 KHZ
18.068 to 18.100 MHZ - CW only
18.100 to 18.105 MHZ - Digital Modes
18.105 to 18.110 MHZ - Packet
18.110 to 18.168 MHZ - SSB and other wide band modes

15 Metre Band - maximum bandwidth 6 KHZ
21.000 to 21.070 MHZ - CW only
21.070 to 21.125 MHZ - Digital Modes
21.090 to 21.125 MHZ - Packet
21.125 to 21.450 MHZ - SSB and other wide band modes

12 Metre Band - Maximum bandwidth 6 KHZ
24.890 to 24.930 MHZ - CW only
24.920 to 24.925 MHZ - Digital Modes
24.925 to 24.930 MHZ - Packet
24.930 to 24.990 MHZ - SSB and other wide band modes

10 Metre Band - Maximum band width 20 KHZ
28.000 to 28.200 MHZ - CW only
28.070 to 28.120 MHZ - Digital Modes
28.120 to 28.190 MHZ - Packet
28.200 to 29.300 MHZ - SSB
29.300 to 29.510 MHZ - Satellite
29.510 to 29.700 MHZ - SSB, FM and repeaters

PIERRE ROGER VE2TQS APPOINTED QUEBEC DIRECTOR

The Board of Directors of Radio Amateurs of Canada is pleased to announce the appointment of Pierre Roger VE2TQS of Montreal as Directeur du Quebec effective June 6, 1994. Pierre Roger is Vice President of RAQI and a member of RAC's Amateur Delegation Working Group (ADWG), in liaison with Industry Canada. Pierre Roger will complete the remaining term of office for Jean-Guy Riverin VE2JGR who resigned because of increasing career demands with Bell Mobility.

RAC President Farrell Hopwood VE7RD stated, "We welcome Pierre Roger to the RAC Board of Directors. We deeply regret losing Jean-Guy Riverin VE2JGR who brought a high level of managerial talent to our organization. Jean-Guy's keen insight and understanding will be missed. We express our thanks to Jean-Guy and wish him every success."

The Director's position in each of the seven national regions will be open for nomination and election in the Fall of 1994.

EMCAB-2 ADVISORY BULLETIN OF CONCERN TO RAC

Industry Canada has killed TRC-86 but resurrected it under an advisory bulletin called EMCAB-2 which appeared in the Canada Gazette recently. It is now in effect, but is not a regulation nor mandatory, but states that with the Department's present Power of Determination under the Radiocommunication Act, the origin of harmful interference may be assessed by an Inspector by measurement of radiated field strength levels.

RAC has concerns that the main issue of manufacturing standards has not been addressed, nor has the operational procedure been developed for making the measurement. Reducing power to meet the levels specified will permit continued operation, but it does nothing to address the social inconvenience of the complainant since the manufacturer has no obligation for immunity of products, according to a RAC news release. Furthermore, RAC objects to associated equipment which contains tuners for broadcast reception (example VCRs), escaping any form of type approval.

"Essentially, the inequity of the principle of spectrum sharing has not been addressed either, and this concerns us greatly," says Ralph Cameron VE3BBM, speaking on behalf of RAC.

SPECIAL PREFIX AND SPECIAL EVENT STATION ASSIGNMENTS

VX3BB has been assigned to the Barrie Amateur Radio Club in recognition of the role community Amateurs played in the tornado which struck Barrie in May, 1985. The station plans to operate CQ WPX CW and Field Day. This year also marks the 10th anniversary of the BARC. Prior to 1984 the club was known as the Georgian College Amateur Radio Club.

CF3AFD has been assigned for the Quinte International Air Show (Armed Forces Day) held from June 24 to 26, 1994. The special prefix was requested by the Trenton Amateur Radio Club. The air show is held at the Canadian Forces Base in Trenton, Ontario.

CF3 for VE3, CG3 for VA3, has been assigned to commemorate the Finlandia week and the 55th Grand Finnish Festival from June 27 to July 3, 1994. The special prefixes were requested by the Lakehead Amateur Radio Club, Thunder Bay, Ontario.

CG7V has been assigned to base station VE7RCN during July and August, 1994, for the XV Commonwealth Games. For QSL send SASE to VE7RCN CG7V), Base Amateur Radio Services, Canadian Forces Base Esquimalt, FMO Victoria, B.C. V0S 1B0

VE3CNE Canadian National Exhibition, Toronto, operating from 10 a.m. to 10 p.m. daily August 19 to September 5, 1994. Every year, Amateur radio clubs around Toronto operate VE3CNE for one day each and also talk to visitors at their booth in the Better Living Centre about becoming a Ham. The station will monitor VE3TWR 145.410 MHz, to answer queries regarding approach roads, parking areas, special events, etc.

CJ3 for VE3, CH3 for VA3, CJ3IPM for the club station, has been assigned for the International Ploughing Match which will be held from September 18 to 25, 1994. The special prefixes were requested by the Renfrew County Amateur Group.

CI, nationally; CJ for VA; CK1 for VY1; CK2 for VY2; VO9 for VO1; VO0 for VO2; to commemorate the 1st National RAC Convention in Calgary from July 29 to 31, 1994. Prefix is also available for all Canadian Amateurs from June 6 to August 6, 1994 to recognize City of Calgary Centennial.

MANITOBA INCOMING QSL BUREAU PAYMENT POLICY

The VE4 Manitoba Incoming QSL Bureau uses METHOD C which requires self addressed envelopes and cash or cheque to cover mailing costs.

SUMMER 1994 EVENTS WE'VE HEARD ABOUT

June 17, 18, 19. Central Alberta Radio League 24th Annual Picnic, Burbank, Alberta.

June 18. Seaway Valley Amateur Radio Club Hamfest, Nativity Hall, 301 McConnell Avenue, Cornwall, Ontario. Information line (613) 936-0096.

June 18. Quinte Amateur Radio Club Hamfest and Computer Show, Dick Ellis Arena, Harder Drive, Belleville, Ontario.

July 2. Le Club de la Rive Sud Hamfest, a la Place Desaulniers, 1023 Boulevard Tachereau, Longueuil, Quebec. Information via packet VE2MRW @ VE2RKY

July 9. Burlington Amateur Radio Ontario Hamfest, Milton Fair Grounds. Information line, (905) 847-0090.

July 23. Charlottetown Amateur Radio Club, 8th Annual Fleamarket, United Church Hall, Cornwall, P.E. Island.

July 29 to 31. Radio Amateurs of Canada 1st Annual Convention, Calgary.

July 30. RAC 1st Annual General Meeting of Members, Calgary.

August 5, 6 and 7. Vernon B.C., Sky High Hamfest, Silver Star Mountain Resort, Vernon.

August 6 and 7. Mission, B.C., 1st Annual Amateur Radio and Emergency Preparedness Exposition, Mission Fairgrounds, 7th Avenue and Talbut Street. Information line, (604) 820-3788.

August 13. Brantford Amateur Radio Club Fleamarket, Woodman Park Community Centre, Brantford, Ontario. Information line, (519) 442-2595.

August 22. York Region Amateur Radio Club Day at the Canadian National Exhibition in Toronto. Volunteers will staff station VE3CNE.

August 26, 27 and 28. The Air Force Telecom Assc. will celebrate their 60th anniversary at Clinton, Ontario. Information line, (613) 549-3582.

August 27. South Pickering Amateur Radio Club Day at the CNE. Volunteers will staff station VE3CNE.

August 27. Lakehead Amateur Radio Club, Northwestern Ontario Hamfest and Fleamarket, Landmark Inn, 1010 Dawson Road, Thunder Bay, Ontario. Information line, (807) 622-2700.

September 10. Lindsay Amateur Radio Club Fleamarket, Lindsay Fairgrounds, Lindsay, Ontario.

September 17. Kingston Amateur Radio Club Fleamarket, St. Margaret's United Church. For information via packet VA3TLL@VE3CDY.

NEXT RAC INTERNET BULLETIN

The print version of this bulletin is sent on the 15th of the month to RAC affiliated clubs, all Section Managers, Bulletin Managers and Official Bulletin Stations throughout each RAC Section. The packet and Internet editions are transmitted as soon thereafter as possible. The next regular bulletin should be transmitted on or about September 15, 1994. Watch for it. And in the meantime, have a great summer! I'll see some of you in Calgary.

Hi field day fans,

Guess the CW field day is getting closer. During the EU field day
stations are desperately looking for DX stations for multipliers.

Is this the same during the US field day?
What should I know if I want to distribute points to FDers in the
U.S.? What is the exchange code? RST/NR?

73 de IK2RMZ

Hi!
Thanks for reading this message.
I am going to the Far East in my summer holiday, and I want some info
about buying equipment such as HF tranceivers, Dual Banders, e.g.

I think I am going to Hong Kong or Singapore, so if you have any addresses,
or perhaps any prices, it would be very nice.

By the way....how is it to get a radio amateur licence in Hong Kong ??

(WARNING - This may irritate some people but too bad.)

Or you could get together with some friends and setup a CLOSED repeater on 70cm.

Your mostly talking about the Evergreen Intertie. It is a nice system that links Oregon, Washington, Idaho, Montana up together. It's only problem is it is not a long QSO system. 2 minutes MAX. Lots of breaks. All the new commers end up there, because most people are willing to talk to them, unlike some of the local no-interlinked machines.

I myself stay on 440 and 1.2 Ghz. 2 meters is kinda boring here.

4291. Mobile Antenna Help!

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-21 13:34:10 UTC
From: jlw3@cec3.wustl.edu
Message-ID: <2u6q8i$qoc@bigfoot.wustl.edu>
Source record: 264670
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

In the continuing quest to be somewhat equipped when my license finally comes and to continue my interest in ham radio before it wanes (I took the test 6 mos ago, and I'm still waiting--yes there is a reason for the delay--yes, I've upgraded to general and my code is nearly ready for the advanced/extra upgrade, and I've not even gotten my first tech-plus license), I'm trying to decide on a mobile antenna.

I'm not willing to punch a hole in the car. In fact, I'm still a college student and the title is in my *parents'* name, not mine.

1) What kind of mount should I use? Mag mount? will that damage the paint if I take it off (I will probably keep the antenna in the trunk when not at use--I don't want it stolen or damaged) and put it on repeatedly? Trunk mount? Mirror mount is out of the question--nothing to clamp it to. I have a Toyota Camry. For the mag/trunk mount, how does the cable feed in? It seems that if it goes through a door or trunk joint, the cable will be pinched, at least a little, and after a while, quite a bit.

2) What kind of connector is better? NMO or UHF? What is the difference (In performance, or strength, etc)?

3) What does spring/coil loading do in relation to performance? Broader bandwidth? Is there lowered performance vs. a whip b/c of inductive losses or anything like that?

4) Is there any experience with ANLI Antenna Corp? They have have Model AT-2B Antenna "200W 1'10" Spring loaded 3/5.5 dBd. NMO (140-155/390-490 MHz)" that is relatively (to comet, diamond, etc) low price--$40, no mount. No gain reference was stated.

5) What is the opinion on Diamond's and Comet's and Larson's dualband antennas (I have an Icom W21AT 440/2m ht)? What is the difference b/w Comet's FL/SB/B series antennas? Between Diamond's SG/NR antennas? (I don't know too much about Larson) Are the performance gains for the "higher-end" antennas of a company worth the price difference for those more "economical"--especially when they are rated in similar power ratings and gain.

6) Recommendations? I am currently thinking to get the ANLI AT-2B + magmount for indoor use on a filing cabinet/cookie sheet because of it's short height --and I'd also use it as a scanner antenna when doing long (12 hour) drives. I'd also get a "higher performance" Diamond or Comet antenna exclusively for use on the car, as they are generally >3 feet long, plus mount. This would have to be easily removable, as drunk college kids may want such a cute antenna as a new addition to dorm decor! Or even sober ones. . .

Thanks in advance for any help you can give--oh yeah, is Diamond's mounts worth the premium you pay for them?

Thanks again!

--jesse

Here are two reports from both ends. Dick W1DGA

From W3ZZ, Gene in Gaithersburg, MD.:
Strickly by accident I ran into this opening yesterday - I worked about
10 stations including that PA3 and also 1 new country for me - OZ. The
opening for us was confined to PA, DL, OZ, SM. British Isles stations
were worked from other areas as was one S59 but not from our area.

By the way, I worked 3 W0s (EM29, EM38) I believe last Monday night the
13th on a 5 min 2 mtr Es opening. All other areas of W1, W2, W3 had
much more extensive openings that day.

>for all sizes. Is my math messed up? Oh, Rs is the skin effect sheet
>resistance.

The following calcs are shamelessly cribbed from a post by Tom Bruhns made back in February.

Zo=60*ln(D/d) / (e^.5)

where
Zo is characteristic impedance of coaxial line
D is inner diameter of outer conductor
d is outer diameter of inner conductor
e is dielectric constant of insulation

A100 = 4.34 * Rt / Zo + 2.78*f*Fp*(e^.5)

where
A100 is dB attenuation for 100 feet of line
Rt is total effective resistance at operating freq
f is operating frequency
Fp is power factor of dielectric at frequency f
(and the second term is generally negligible at HF,
leaving 4.34*Rt/Zo, for practical insulations.
Dissipation in the insulation favors lower impedance
since the loss goes down with voltage)

Rt = .1 * f^.5 * (1/d + 1/D)

You can reduce this: let D/d = x, then

A100*D/(7.233E-3*(e*f)^.5) = (x + 1) / ln(x)

For a constant D, e and f, you want to minimize the right side for
minimum attenuation. That leads to the D/d mentioned above.
Substitute e=1 into the Zo formula for air; e=2.26 for polyethelene,
and e=2.10 for teflon.

So for cables of any given outside diameter, the ratio of 3.59112:1
outer to inner holds for the lowest A100. That gives a roughly 75
ohm impedance for air dielectric and a roughly 50 ohm impedance for
poly and teflon.

: This must be for some preset inner conductor diameter. When I work
: the loss of the coax (assuming perfect dielectric -- loss only due
: to skin effect), I get:

: alpha = R/2Zo

: where R = (Rs/2pi)*(1/ro + 1/ri)
: and Zo = (sqrt (mu/epsilon)/2pi)*(ln(ro/ri))

: So, for a given inner conductor diameter, there will be a specific
: impedance for minimum loss, but I don't see how that ratio holds
: for all sizes. Is my math messed up? Oh, Rs is the skin effect sheet
: resistance.

Actually, it's for a given _outer_ conductor diameter, where the inner and outer conductors have the same resistivity. For instance, for aluminum-jacketed line with a copper inner conductor, the lowest loss for a given OD is a bit higher than if both conductors are copper (or both are aluminum). 75 ohm foam aluminum-jacketed CATV line is just about optimum impedance for that dielectric. There was a good article a couple years ago in "RF Design" about coax loss that went into this sort of thing.

If the dielectric loss is ignored, for a given _inner_ conductor diameter, it is clear that the lowest loss will be for an infinite outer conductor diameter--that also assumes something about modes, of course. Reason: the higher the impedance, the more power transmitted for a given current, and all the loss is because of current in the conductors. (See also "surface wave transmission line" which is a single-conductor line with very low loss.)

In coax, making the outer conductor large is expensive--both from the standpoint of outer conductor cost and insulation cost. However, in open wire line, wider spacing is fairly cheap. Up to the point where

radiation or dielectric loss starts to become significant, the higher the impedance line you make with a given pair of conductors, the lower the loss. This is true _even_if_the_load_is_lower_impedance_than_the_line_. That is, making the line higher impedance will give lower loss even though the SWR on the line increases. This is easy to see if you realize that the max current is at the load, and making the line impedance higher decreases the current everywhere else, for a given load current (again assuming the load impedance is lower than the line impedance). (It's also true that if the load is higher impedance than the line, increasing the line impedance helps, but the explanation has to be modified.)

Cheers,
Tom -- K7ITM

>generally resent that type of dinosaur attitude.

You're partially right. I am precise. But the rest of that is crap,
specifically "uncompromising" and "out of date" and "dinosaur". In
eleven and one-half years, when you are my age (39), you'll see how
funny that statement sounds.

>Language and lingo/jargon are particular to groups, not to the society as a
>whole. If a particular group wishes to recognize a particular form of
>address, then so be it.

That is inherently true. When someone says "gaa gaa goo goo mama" I
tend to associate them with children. When someone says "3's and 8's
to ya', good buddy", I tend to associate them with CBers. No moral
judgements there, just the benefit of the experience of my jurassic 39
years on this planet.

>This reminds me of the juice commercials where the town elders are crying
>about "moral outrage" and "abominations". Well, we are going to have our
>apple-orange juice mix, regardless of your objections.

Sorry, I don't watch TV often enough to have the commercials
memorized. I prefer being a participant on the ham bands, instead of
an arm-chair spectator of network TV.

Although I am not a ham I have for years been dragging some old QST's around with me. These are mostly from the 30's into the 50's and mostly complete although no longer pristine. Anyway I would like to get rid of them, preferably to someone who can pick them up in the Champaign-Urbana IL area.

So the first person (if anyone wants them) who can arrange to pick them up can have them. If you email me and I don't respond someone else got them.

4302. Amateur service numbers decline in March '94

: the free market at work.

: >On the other hand, I don't see any reason the VECs could not file
: >electronically - for what it's worth.

: It's worth about 2 weeks for the ARRL VEC. All the VE documents have
: to be keypunched into the ARRL computer for verification, then the
: *paper* is forwarded to the FCC where it's keypunched *again*. Any
: time keypunching can be reduced, delays will be reduced. Having the
: VECs submit on disk should drop the delay at the FCC to a couple of
: days, and moving the keypunching out to the VEs should cut the 2 week
: delay at the VEC to a couple of days. Add a week for the US Mail,
: and an application should the processed, and the license mailed and
: received in 2 weeks tops. That's a reasonable turnaround time.

: Gary
: --

I agree that electronic application filing is a super idea, whose time
has come. As Gary points out, it should actually **lower** the necessary
manpower required by the FCC to process licenses. Clearly this is a
priority to them, with their budget constraints. And it should greatly
speed up applications: everyone wins.

And as Gary observes, not every VE would necessarily have to have the
capability. In fact, perhaps the VEC could do the actual electronic
communication with the FCC. While each VE session may not have to have a
computer, perhaps it isn't to much to expect that each VEC would have the
resources to round up a computer and a phone.

Just a thought......

: meters. Is this the case?

: Also, if someone knows of a ham radio club in the area I'd really
: appreciate it.

: The ham license plates has been covered here, thanks.

: Anything else would be appreciated.

I don't live in Washington State (though I'd like to! :)) but I did
motor thru the state with my HT last year.

Lots of 2 meter and 440 repeaters. Many are linked every which way to
every which band, such that you may be in eastern Washington talking to
someone in Seattle, on 2 meters, and find out that he is coming thru a 440
or 1.2 gig gateway.

A nice system, actually, and the people were quite friendly. Some of the
local repeaters were a bit provincial, but that's true most places, I
'spose.

Well a few questions. Does your country have draconian import duties
on ham gear and are you using your trip to get aroudn them? Do you
know if you'll get those duties anyhow when you return? (you used to
in Australia, and possibly still do).
Are you shopping there because the prices will be cheaper?
The US has few import duties and I found that I bought some nice
stuff in Japan once, to arrive in the US later to find that the prices
were cheaper here.
Are you shopping there to get some piece of equipment not available
at home? If so make sure you have all the manuals and know what you're
going to do when the thing needs servicing at home and the box is
not supported by the manufacturer.
I was in Hong Kong in '68 and I couldn't find a piece of ham
gear there to save my life. I think Hong Kong is more oriented to
higher volume stuff for rich people, like jewelry I spose.

I would like to know if any of you "Packet Hackers" have any info. on a Contronics C200 Micro Earth Station.
It was manufactured by Contronics. The division that made it is no longer in operation. It was bought out by GTE Spacenet. They will not give me any info on it. Depending on who you talk to you will get conflicting stories. Some say the info is proprietary some say it is not. The only info they have sent me is for a 40 foot earth listing station. The one I have is a scaled down model. ie:2.5 meter.
I hope to use this for packet radio someday. I am in the process of aquiring my "Ham" license now. Can anyone tell me how to use this "dish" and controller for listening purposes.
The "dish" came from a Farmers insurance agent that went out of business. I acquired it at an auction.
I can be reached at colink@kira.csos.orst.edu Thanks...Colin.

Does anyone have any computer art/photographs of amateur radio related
scenes?

GIF or BMP files of a nice antenna layout at sunset comes to mind.
You know, something that would make for good Windows wallpaper. 73.

I think the fuel pump only has power applied to it when the key is in the ON
position, not ACC. I would suspect some under-dash electronics instead.

Don/Gary,
In their August, 1969 edition of "What's New From Bird", a news letter from Bird Electronic Corp., there is a "refresher" essay on transmission line parameters. They describe the three parameters of interest for any given outer conductor diameter of coax, the minimum attenuation, the maximum breakdown voltage, and the maximum power carrying capacity. The impedance's that result for air line to optimize each are about 77 (close enough to your 76.708 Gary, when you consider that those were the days of the slide rule), 60, and 30 ohms, respectively.

However, buried in the article is a very interesting comment. "According to Consultant C. L. Rouault, who was present, an RMA committee in the 40's recommended to the U.S. Navy that an impedance of approximately 50 ohms be selected the standard as a compromise between transmission parameters, as well as commercially available copper water-tubing sizes."

Modern nicads don't have "memory." You can't induce a memory without hundreds
of equal-length cycles, anyway.

Nicad memory is largely a thing of myth. I've seen more nicad abuse in
persuit of avoiding "memory" than anything.

> If I'm
> unsure about how much charge is left in a set before heading out, I
> simply pop in a fully charged set (they don't drain unused, like
> nicads), put the questionable ones in the charger, and exit.

Nicads have a pretty long self-discharge rate. Lead acid cells, on the other
hand.... And I don't see why you couldn't pop a set of fully charged nicads
in like you do the renewals.

> In any case, I'm very pleased with the system, especially being free
> of nicad auto discharging and memory worries.

Your worries are largely unfounded.

For what it is worth, two of my friends have Newton 110s and use Renewal
batteries in them. Ordinary Nicads won't do, because the terminal voltage
isn't enough. The Newton battery back (with 5 nicad cells) is expensive, as
is the charger.

They seem to get reasonable life out of the Renewals.

4322. Tunnel Radio Help Request

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-21 22:04:59 UTC
From: whester@nyx10.cs.du.edu
Message-ID: <2u7o6b$8lq@nyx10.cs.du.edu>
Source record: 264771

I have a work project and I am looking for someone with some real world experience and/or advice in sending RF through underground tunnels.

The problem is to provide safety communications during a water conduit tunnel inspection trip - which only happens once every 10 years. The problem constraints are:

> need a temporary installation, easily installed and removed
> must provide two-way voice communications
> work reliably over a distance of 23 miles (37 km), through a damp, round, concrete lined tunnel, approx. 10 ft. (3.5 meters) in diameter
> the tunnel is mostly a straight line, with a single 30 degree horizontal bend, about 9 miles (14 km) from one end
> there is a source of 12 volt D.C. power on a motorized tunnel inspection vehicle

Experimentation has shown:

> using 100 watts of F.M. at 48.5 MHz, propagation is only about 150 feet (50 meters) with a loaded 1/4 wave whip mounted on the cart
> using 50 watts of F.M. at 450 MHz, propagation is up to 1500 feet (500 meters) with 4 element Yagi antennas on both ends
> in both of these field tests, the received power drops off suddenly at the stated distances

I guess that some form of "lossy" waveguide theory is needed to figure this all out properly...but I'm not into a graduate research program. I need a practical, proven, method now.

I am considering going to higher frequencies (microwave) or even trying some scheme using modulated laser light links.

Is there anyone out there who has actually done tunnel radio, or who knows of commercial mine or tunnel radio equipment that will work?

Note: installing "leaky coax" is not acceptable. It is too costly, time consuming, and it must be removed each time after the inspection is done.

Thanks for any help you can give.

The Seattle area has lots of 222 Mhz repeaters and even some activity there.
So don't forget the 'forgotten band' I operate on 224.94 down here in the
Portland area. Jeff is right about 2 meters except simplex which I enjoy
on 146.52 and other freqs. 223.50 is active in the Northwest as well. I
even had a short chat with some bootleggers on 223.50 while flying air-mobile
up around Toledo, WA. You would think they would pick another freq besides
the 'National Simplex' channel for 222 Mhz. Course the packeteers have kinda
taken over the other 222 simplex voice freqs since they got booted outa
the basement of that band.
The Evergreen Intertie is kinda fun to listen to, no fun to talk on. They
have a Northwest-wide weather check about 8:00 every morning for instance.
Many mountain top repeaters are in the NorthWest with good coverage while the
ham population density is relatively low. Repeaters with excellent locations
and coverage go pretty much unused in Eastern WA and OR.

Can anyone tell me where I might find (purchase cheaply) some 12-24 VDC
relays that I can use to switch in/out my 2m and 70cm antenna preamps?
I need to take the premaps out-of-line before transmitting. They need to
operate at 145 and 443 MHz with minimum signal lost and capable of handling
150 watts of RF output power. I perfer PC mount type so I can mount them inside
the preamp bud box. Coaxial relays (Dowell or TohTus) are big and require coax
connectors.

Thanks, Tom WB7ASR...

4338. Lead Acid Storage Batteries

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-22 02:51:29 UTC
From: "l.h. bol" <lbol@julian.uwo.ca>
Message-ID: <Pine.3.88.9406212222.A8410-0100000@julian.uwo.ca>
Source record: 264779

I have aquired some sealed lead acid cells (plastic pack containing 6 cells rated for 5AH) and am trying to figure out the proper charge current for them. I don't want to over-charge them (or under charge)

From what I can recall, the charge rate (I) is relative to the AH rating of the cell(s) ??? Do you charge them with a voltage higher than the voltage of the cell(s) ? I seem to have to do this to get them to draw any current when I try to charge them.

Can anyone steer me to the proper proceedures or charger design theory.

Yes, I suppose I could buy a cheap automotive type charger but I've got all kinds of transformers and diodes etc. kicking around and would like to try and use them up.

Thanks in advance for any help you can offer.

>current for them. I don't want to over-charge them (or under charge)

There was an article in March 1994 QST on a charger for sealed lead-acid
batteries.

Key points:
1. charging voltage should not exceed 2.45 volts/cell, i.e., 14.7 volts for
a 12 volt battery pack.
2. max charge rate must not exceed 15% of the amp-hour capacity

I have seen slightly different specs on the maximum permissible current in
manufacturers' literature from different sources, but the maximum voltage
per cell will always be the same, since this is determined by the basic
chemistry of the system. I have specs from PowerSonic which specify:

Limit initial current to 20% of Ahr capacity. Charge until voltage under
charge reaches 2.45 volts/cell at 68F (20C). Hold at 2.45 volts per cell
until current drops to approximately 1% of Ahr capacity. At this point
the battery is fully charged. It can be maintained in a fully charged
condition by connecting to a constant voltage source of 2.25 to 2.30 volts
per cell.

>Yes, I suppose I could buy a cheap automotive type charger but I've got
>all kinds of transformers and diodes etc. kicking around and would like
>to try and use them up.

Lead acid batteries are normally charged with a constant voltage
charger. For a nominal 12 volt battery, charger voltage should be
14.5 volts during charge, and 13.8 volts during sustain. Auto chargers
use a saturable core transformer to limit initial charging current,
cheap and effective. You'll have to install a current limiter when
using ordinary transformers. Current should be limited to 0.1 C
for gell cells, 0.33 C for wet cells, where C is the amp-hour rating.
An auto tail light bulb will do as a current limiter for your gell
cell. Just put it in series between the 14.5 volt source and the
battery. It's resistance is non-linear depending on current draw,
so it'll allow near full voltage at low current, and drop the
voltage as current draw increases, forming a self-regulating
system. Crude, but effective.

<deleted>
Those sob's that taught me in college made me derive this stuff, and then I find out that it's done in Chipman, "Transmission Lines " (Schaum's outline series--if you have a vaguely technical bookstore nearby, especially in a college town, they will have it--and I guarantee you, it's one of the very best references on transmission lines you will ever own).
1. For maximum power handling capability, Z0=35 ohms (or so) is optimum. That's why that standard value exists.
2. For minimum attenuation per unit length, Z0=75 ohms (or so) is optimum. That's why that value exists.
3. The compromise between these two optimum values in nearly 50 ohms (geometric mean). Perhaps that's how that value came about...just my guess.

300 ohms is the impedance of a folded dipole - the sort of thing used in
old FM tuners where you could make the dipole out of a piece of the
feeder with a bit of thought.

>Does this mean that people entering as Novice Class operators will
>not experience the delay that no-code Techs have been experiencing?

I took my test March 6, passed the Tech and the 5WPM code, and
got my "Tech _Plus_" license in the mail June 16. (I'm WH6UR.) That seems
to have been a rather typical delay. I don't think you can jump the paperwork
queue that easily!

I'm getting a Standard C558A handie-talkie in the mail tomorrow
(I hope!). Anybody have advice for a new Standard C558A owner, let me know!

PS: If anyone needs a UNIX morse-code practice program, you can find
the one I wrote on sepftp.stanford.edu! (I tried to submit it to a standard
ham-site archive once, but they weren't interested in UNIX programs, only DOS.)

I have a 20 amp Astron supply that was hit by lightning and it wiped out
the mov and a ceramic disk cap that was tied between the a. c. hot line
and ground. The disk vaporized, so I have no idea what size it should be.
I suspect it isn't critical, but I wonder if someone would be able to
give me a ballpark size to replace it with? I have a bunch of
surplus disks, so I've probably got one, but what is it? .001 ufd?
Bigger? Smaller?

Thanks,
Jim.

The two major VECs, W5YI and ARRL, both have computer systems. I'm sure all
the other minor VECs do too, I can't imagine a VEC without a PC of some
sort.

Electronic filing in this respect is an excellent idea, and clearly would
reduce wait times to acceptable values. With the "new computer system"
online, I can't imagine what is holding up some form of EDI standard.

>Would like to hear from anyone who is using the KAM Plus modem.
>I'm considering buying one and would appreciate a frank appraisal
>on the unit. Would also like to hear some comments on the companion
>software KAM Gold.

I just picked one up on Saturday. Nice new toy from my kids for
father's day. Had to order the Kantronics Host Master 2 software
to be able to do simultaneous VHF packet & HF modes.

My main interest is in working DX. Since I use DXBASE for logging
and enjoy the benefits of PacketCluster operation while I tune the
band, I lose this capability when running the KAM+ in ALLMODE.
So if I want to chase DX on RTTY I can't do both VHF packet and
HF RTTY (nor Amtor, G-TOR, ASCII, FEC, etc.)

The KAM+ has replaced a PacComm Tiny2 on VHF packet, and it appears
the KAM is MUCH more sensitive - less retries and it just simply
hears more & better. On RTTY I don't have anything to compare too,
but with all the summer static it seems to bw very sensitive, and
has very sharp audio filters. I don't think it employs DSP technology,
but it sure acts like it does. In RTTY mode, even when the signal drops
into the noise, the KAM keeps on printing.

I understand that there are other, competing, software packages out
there for the KAM+, like KAGOLD, but I have not had a chance to
review them. Afterall, I don't think any of the programs will address
my specific need, which is to be able to stay connected to the local
packet cluster, run HF RTTY from my logging program. (ALERT: to the
software writers!!!) Maybe someone will address this need in a logging
program.

Hope this helps & GL with whatever you decide on...

Greetings -

I was told that a fairly recent issue of 73 magazine tested different headsets for motorcycle helmet use. I would very much appreciate it if someone could let me know which issue, so I can try and track it down, or give me a quick summary of what they found and recommend. I'm presently trying to set up my motorcycle for mobile use and am preparing to buy the headset pieces for my helmet, and also starting to set up the wiring. A related question would be suggestions as to the circuitry that would allow a radar detector alarm to break into the earphones even while having a QSO.

Thanks much for any information,

Steve

Hi all;
I am interested in compiling a list of all frequencies used in
North Dakota. Included would LF, HF, VHF, UHF, etc. Also if anyone can,
please include amatuer repeater frequencies used in state. This list
will eventually include not just the 'normal' PD/FD/SO etc frequncies,
but private businesses, amatuer freqs, and any other interesting things
that you may have heard.
Once I have completed all this compiling, I plan on posting it to
all news groups that applies for greatest dissemination and accesibility
to anyone who monitors anything.
If anyone has any frequencies thatg may be of interest to others
or is especially interesting, please email me your lists, or whatever.
If you are interested in getting this list as it is updated,
please send me your email address and I will be happy to send them to
you. NOTE: I wil not send via snail mail as this is expensive.
If you are located in the local Minot or Bismarck area, I have
already compiled a list of about 5 pages that you may be interested in.
Let me know.

Happy Monitoring !!!!!!!

: By Golly, Tom, I think you're on to something. If the maximum current is
: at the load and the load is resistive, then the load is soaking up
: more power than the generator is putting out... that's pretty efficient.

Flap, flap, flap, "Caw, caw!", munch, munch -- Oh, yummy, that tasted
good.

Oops. I really should have been talking about square roots of the
mean squared current, with that mean taken along the length of the
line...but I slipped a cog, thinking, "SWR decreases as you get
away from the load, and therefore the ratio of max to min current
decreases, and therefore (in a blind leap) the max current decreases.
Since power is lost in the line, the max current does increase toward
the generator, but I think if you look at it carefully, you will indeed
find that net loss decreases with increased line impedance, if you
keep the conductor resistance constant and don't get the line spaced so
wide that radiation enters in or insulation loss becomes a factor.
That's for a constant load resistance; it's even better if the load
can be made to always match the line.

Thanks for keeping me honest, Cecil! ;-)

Cheers, Tom -- K7ITM

I gotta take exception. I was first licensed in 1958. Back then more hams
that I talked with used 73's than 73 on phone. It didn't come from CB, since
we had just lost 11 meters about the time I got my license. It wasn't until
pretty late in the CB craze that I heard them using 73 or 88 in fact....

I agree that something definitly has to be done about the long
wait for licenses. ARRL VEC is now saying 16 weeks from the
time the FCC gets the paperwork. Egads! No wonder attracting
people to the hobby is no hard.

|>

Back in the 60's I talked with a ham in Kansas that had hooked up to an old telegraph line that was running through his property and used it for a long wire. He claimed that he followed it for 7 miles before he found a break in the line. Oh, yes he had a pretty good signal.

73,
Jim.

From: ham@wam.umd.edu
Message-ID: <2u9m9c$4mn@cville-srv.wam.umd.edu>
Source record: 264823

Ever wonder just how much RF a dummy load radiates?

I was trying out a Yaesu FT-707/FC-707 setup with a dummy load for my parents-in-law, seeing what the alignment was like, and seeing what kind of power I could put out. Of course, I was transmitting into the FC-707's built-in dummy load.

I went tuning around, and here's somebody at S9 + 20! On the dummy load! So I waited for him to finish with his QSO, and xmitted into the dummy load at about 25 watts, and not surprisingly, he answered, and we had a nice qso.

Turns out has was N3CAU, a ham living about 800 feet from my house. Even when he throttled down to 25 watts, he was still a strong S9. We exchanged cards by hand a couple of days later.

We've vowed to try it again at 1 watt or so, and this time I want to try it into the Heathkit Cantenna...

From: guillory@blkbox.com
Message-ID: <2u9mq7$oln@blkbox.blkbox.COM>
Source record: 264826

For those of you who are lurking in the group and waiting for your license, I have bad news.

I just talked to the ARRL VEC and they said that the current wait is 16 weeks from the time that the FCC gets the paperwork from ARRL.

The VEC manager reports that there are 16,000 license actions pending at the FCC. As reported previously there ar 1 or 2 people processing the applications once a week.

Perhaps I should have titled this message

"DEATH OF A NEW HAM"

(I guess I will just be a lookie Lou on Field day.)

>Jeff NH6IL

I got 'em, and I intend to read them and share them with friends who appreciate
the value. I am not a collector of any thing except for the time it takes to
enjoy something, learn from it, and pass it on. There weren't as many years as
first thought, but I am greatful for what there was (abt 60 or 70 issues).
What is neat is that there are a couple of 1929, 1930, etc. issues. The first
one I picked up, flipped open to an article on building a xmitter, I read
"The transformers in this project are not difficult to build.....", and
then went on to give a lesson on how to build a transformer, giving design
equations, and instructions on how to build the laminations, etc. Kind of an
eye opener. I guess I'll finish that 100amp supply that I need to wind 17
turns of #12 four times on the xformer....that already has a primary. Poor
baby that I am having to make my own secondary winding....
Anyway relax Jeff, but thanks for your concern and attitude on this. I agree.

Source record: 264685

YOU KNOW IT'S TIME TO GIVE UP HAM RADIO WHEN

You're talking on the phone with a ham buddy, and you end the conversation and hang up the phone with a 'KD1HZ clear'.

You end a face-to-face conversation with "dit dit".

You spend 2 hours trying to crack a pile up on 20 meters to work a KJ2 station who is portable on Manhatten Island.

When you say things like "QSO" and "73" in casual, face-to-face conversations.

You're having a Saturday breakfast and you say "call please" so that you can interrupt a conversation to ask someone to pass the salt.

You go shopping, get to the check-out, write a check, and sign it KE3HO.

You answer your phone, "QRZ?"

Your wife points out that all of your children were born during sunspot minimums.

You're talking on an EMS telemetry radio with a base hospital for medication orders and such, and sign out with your callsign

To get your ham buddies attention (who lives across the street), you yell 'CQ! CQ! CQ!' from your driveway

Your wife starts talking to you while you're on the phone, and you tell the person on the other end you're getting intermod

You've named your brand new German Shepherd puppy 'Radio Flyer' to combine two of your hobbies (this is true, this is my dog's name)

You're talking to somebody face-to-face in a busy place and you say, "Let's QSY my office," and they know exactly what you mean!

U find urself typing in cw shorthand to fellow wrkers on internal email (I hve found myself doing this too many times)

U tell people over the phone "I'm at my work QTH"

When the kids get names related to radio. I'm Robert F. Casey, that's RF, or radio frequency, or go further, radio frequency choke. :-)

Your 5-year-old son picks up your HT and says, "SQB monitoring!"

You'd rather send someone a packet radio message on the 2-meter band when you know damed well they also have a fully functional

answering machine on their phone line! My wife loves that one!!

You are in your car, and see somebody you know walking down the street instead of going beep-beep and waving you pound out CQ on your car horn and wave.

Oh, no. I forgot about our cat, named "CQ", who would think it was dinnertime whenever I operated 20m SSB.

Somebody asks you over the telephone "can you hear me okay"? and you in return give them a signal report.

When you're boss starts babbling about something and you wish you had a VFO instead of this damn crystal on his frequency so you could tune off. :-) [just kidding Mike]

When you start taking posts on rec.radio.amateur.misc seriously.

You wonder why trains always send a "Q" before they pass a RR crossing.

You hear code in your sleep, you hear code in the air conditioner motor, you hear code from the crickets outside (terrible chirp), you hear code emanating from the refrigerator motor, you hear code when someone beeps their horn in traffic

You use "Destinated" in a sentence.

You think it really matters if someone says 73's instead of 73.

You actually use the alarm clock function in your Handie-Talkie so that you can, "Wake up to your favorite net or repeater."

Lead-acid batteries are best charged constant voltage with a current limit
equal to 0.3C. The voltage for cycle operation should be between 2.35
and 2.50V (reference 20C) with a -2.3 mV/C temperature coefficient.

For your case, you have 3 cells, so you want a constant voltage supply
between 7.05 and 7.50V current limited to 1.5A peak.

Charging is completed, when the current drops to a small value, say 50
to 100 mA.

You don't want to leave it in that state too long, as that will cause
water to electrolyze excessively. For float operation, drop the
voltage to 2.25V/cell, or 6.75V. That should keep the battery from
self-discharging.

If you environment is overtly hot or cold, adjust the voltage accordingly.

Good luck.

-Ken

|> written test, and can therefore get a General just by passing the 13
|> wpm CW test, since before that date Technicians took the same written
|> test as Generals.

Maybe I'm wrong, but doesn't the FCC know who has passed element 1a and who hasn't?
Don't they also know if you are a grandfathered tech too? If they don't how would they
be able to cite you for out of band operation if they caught a no-code on 40 mtr cw?

I suspect that the FCC has all that in their records, so your CSCE is for the benefit of
interested parties other than the FCC. When they get around to issuing a renewal/modified
license for a TECH PLUS it will show TECH PLUS without the applicant furnishing proof.

No????

73's (I come from the old school! 8^)

Thanks to all who sent me email suggesting possible fixes to cure the
Astron power supply problem.

I called Astron and they have a $15 circuit board which does an automatic
of the power supply when there is a power line glitch. They claim a simple
4 wire installation and the problem will be solved. So, it's on it's way to me
and soon I will know it it really works!

Again, thanks to all who wrote to me

vlf?

I know it works for subs, but does it work under the earth and can you get any bandwidth? I just tossed that out as a possibility. I'm not very familiar with vlf operation.

Jim.

4406. Two new mailing lists: arrl-exam-list and arrl-nediv-list

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-22 19:33:30 UTC
From: n1ist@netcom.com
Message-ID: <n1istCrtCzv.GA3@netcom.com>
Source record: 264698

Announcing two new Ham-related mailing lists!

arrl-exam-list:

This list is a bi-monthly listing of amateur radio license examinations scheduled in the US and in some foreign areas. While the list is not a complete list of every scheduled test, it is a list of those tests that we have been made aware of from ARRL/VEC-coordinated VE teams and teams from other VECs.

arrl-nediv-list:

This is a bi-monthly information bulletin prepared by the ARRL Division Director, Bill Burden WB1BRE for immediate distribution to individuals, clubs, Bulletin Managers, and other interested parties in New England. While some material will be of national interest, the intent is to report on issues and activities of interest to Amateur operators in the New England Division. Newsletter editors are encourage to reprint any or all of the bulletin material and Bulletin Managers and NCS are encouraged to distribute the bulletin material.

These two lists join the other ham radio related lists maintained here at Netcom:

barc-list: Information, discussion and anouncements for the Boston Amateur Radio Club and hams in Eastern Massachusetts.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
barc-races: RACES in Massachusetts and emergency management
fox-list: Fox hunting and Radio Direction Finding
ky1n-list: VE exams in New England
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio

These lists are automatically maintained by Majordomo. To sign up or inquire about these lists, send mail to listserv@netcom.com with the following in the body (subject is ignored) of the message. <listname> is the name of the list to subscribe to.

To subscribe: subscribe <listname>

To unsubscribe: unsubscribe <listname>

For more information: help

To post (to the two-way lists), send your message to <listname>@netcom.com

Mail should be sent to listserv@netcom.com, not listserv@world.std.com.

Please keep your mailing address up to date. If your account is being
changed or shut down, please update majordomo.

These lists are sponsored by the Boston Amateur Radio Club.
If you have any questions, I can be reached at n1ist@netcom.com
For more information on the Boston ARC, subscribe to barc-list

>
> Thanks Bob KA5GLX Houston, Tx
> biekert@vnet.ibm.com

This supply MAY have an overvoltage "crowbar" protection circuit which is set a little too close to the supplies normal output voltage. If so, find the trip point by adjusting the output up slightly until it engages. If it's too close, adjust the crowbar circuit operating point higher. Don't let the output voltage get above say 15V.

Or the output voltage may have drifted up to where the OVP trips too easily. In either case, set the output voltage to 13.8 with an accurate dvm.

Message-ID: <chuck.lampman-220694153717@clampman.gatech.edu>
Source record: 264704

In article <chuck.lampman-220694100419@clampman.gatech.edu>, I wrote to ask about the possibility of danger from RF from a new neighbor's antenna-

Many thanks to Scott Rosenfeld, Tom Bodoh, Scott Dorsey, Sandy Lynch amd Gary Coffman, from whom I learned that what I am looking at is a multi-element beam antenna, probably a "triband yagi", that is pointed directly away from us most of the time, with a 2 meter vertical on top of it, and a dipole between the mast and a tree some distance away. I learned to ask her what frequencies she is operating on, and how much power she is radiating, and some basic parameters in terms of what's "normal" and what's possible.

I also learned that not much is known for sure about the dangers of RF, but that in the typical 3 - 30 mHz ran there seems to be less concern than in the very high and very low frequency ranges, and that lots of people live in areas with much higher levels of RF than this antenna will generate.

I also learned that hams seem like a pretty good group of folks- sthanks a lot for your help!

The standard practice for sending RF in tunnels is leaky feeders, which
are simply coax with poor braid coverage run down the length of the tunnel.
These leaky feeders are available for sale, with datasheets, etc.
A friend of mine did some consulting work on a mine using this type of
system for a 9 mile tunnel. The system used several repeaters, for
different areas, linked into one repeater system using audio cable.

I would just like to point out that this shows the true spirit of amateur radio. Rather than a few of those crotchety old-timers whining "don't pick on us", we have some hams stepping forward with honest facts and trying to help folks who aren't as familiar with things we play with in our hobby. Thanks, guys! And Chuck- I missed your original post but I see that you are at Tech stop on by the shack sometime and who knows, maybe someday soon you too will be an amateur radio operator! Send e-mail if you are interested...

Just for interest's sake:
Here on Oahu we have two tunnels carved into a mountain range - these are main routes between the South Shore (Honolulu) and the Windward side. The state transportation department has a wideband `repeater' that repeats the entire AM broadcast band within the tunnels - the antenna wire runs the entire length of each tunnel.

Guess motorists, stuck in rush hour traffic, complained of poor reception; I'd worry more about the noxious fumes.

ES>
ES> --- eric (hopefully still ka1eec)

I wouldn't worry about it... Probably technically, you're not supposed to transmit until you get the new license in your hands, but who's gonna know? And who's gonna enforce it? But with only 90 days having passed, I wouldn't worry about the form being lost or anything like that. As I'm sure you've heard all around, the FCC isn't cranking them out too fast these days!

As much as I relocate, I don't think I'll ever have to worry about renewing, since that's covered each time I change my address... :)

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 22/2330Z JUNE 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 22 JUNE AND FORECAST UP TO 25 JUNE

IPS Disturbance Warning 17 was issued on 22 June and is current for
interval 24 June to 4 July

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 072/008

GOES satellite data for 21 June
Daily Proton Fluence >1 MeV: 7.6E+05
Daily Proton Fluence >10 MeV: 1.2E+04
Daily Electron Fluence >2 MeV: 1.7E+08
X-ray background: A1.8
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
23 June 24 June 25 June
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 070/005

1C. SOLAR COMMENT
The coronal hole that has been causing the recent lengthy
disturbances appears weaker in xray images.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 21 June
Learmonth 07 3232 2111
Fredericksburg 09 13
Planetary 10 10

Observed Kp for 21 June: 2333 3222

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS

23 Jun 12 Quiet to unsettled.
24 Jun 20 Active to minor storm.
25 Jun 20 Active.

2C. MAGNETIC COMMENT
None.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
22 Jun normal normal normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
23 Jun normal normal fair
24 Jun normal fair poor
25 Jun normal fair poor
3C. GLOBAL HF PROPAGATION COMMENT
Degraded HF comms conditions expected after June 24.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T index for 22 June: 32

Predicted Monthly T Index for June is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
23 Jun 30 Near predicted monthly values.
24 Jun 30 Near predicted monthly values.
25 Jun 10 About 15% below predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Dedraded HF comms expected at times during interval June 24 - July 4.

There is no multiplier for zones, sections, countries, etc. in
the ARRL Field Day. The non-US and non-Canadian stations only
count for an additional contact. Field Day is traditionally a
much more laid-back contest (oh, no! flame wars!) than others.
It is common for FD stations in the heat of breaking pile-ups to
inquire how a friend is doing, or to compare FD notes, pass along
greetings to those at the place being contacted, etc. Then you
wish the other station luck and get on with trying to maximize
your own luck.

The FD exchange is station class and ARRL Section. Station class
is number of transmitters and a letter to designate station operation.
A is club or non-club group, I don't recall what B is, C is mobile and
capable of operation while in motion, and for D and E, one is home on
commercial mains, and the other is home on emergency power, but I don't
remember which is which. For example, my local clube, operating 3
transmitters in the Eastern Pennsylvania ARRL Section will be
3A, EPA for the exchange.

Foreign stations give RS/RST and country.

Happy Field Day!

73

Bob, NX3S (look for W3AI, my club station)

>here in NJ, but no one on the squad knows if I have to register it since it
>is my own, and not theirs.

Other than being certain that the radio is FCC type accepted for the service in which it is used, there is no registration requirement. I'm with OEM in Middlesex County and use a Yaesu FTC-1123 of my own in accordance with our Department Operating Procedure. It is type accepted for commercial use and I have notified my Bureau Chief of my intent to use it; this is as close as it gets to registration. Your squad may have a similar policy. As long as their license is current and the number of transmitters is not exceeded (and they are almost always overstated for expansion), you're fine.

Many PUBLIC libraries will also appreciate them. With the current state of budgets in many areas, libraries are not able to purchase books, maintain subscriptions, or even stay open in some cases.

I heartily concur with Jeff...donate them to some steward who will see that they are put to good use. (N.B. - Most radio clubs DO NOT fall into this category; they usually have too many copies of back issues already.)

Exactly my findings. If the Isoloop isn't working for some reason, double check the installation and location. Remember, loop antennas were in use at the beginning of the radio era, so the designs and concepts are not new, but they are tried and tested. I've got mine in the attic and have been working world-wide DX w/better than average results.

Despair not, George. Check the rules closely and you'll find that you
can, in fact, work Field Day. As long as there is a control op with you
and you're talking to allowed third-party stations, you, too, can put
your dulcet tones over the air. The rules say you may not OPERATE the
station, but the licensee can certainly key the transmitter for you.
Happens every 'phone patch.

Oh yeah, before you start emailing that 27 weeks is too long and I should complain, etc., I know. But I called about 2 weeks ago and the person I talked to said they were processing 300 applications a day. I assumed that was correct. Now, 16000 actions divided by 300 per day = 53.3 days, divided by 5 business days a week = 10.7 weeks. I still like the 12 week quote, but I guess reality reigns. The VEC told me (3 months ago) to call Today (as in 23 June) and check on the status so I'll do that again and listen to the recording to see the waiting time they say. . .

Have you tried 'gophering' to the University of Illinois weather machine? Its computer keeps a very impressive archive of the weather maps in the States (updated every hour or so). The maps are very nice. I have experimented with many converters / softwares hooked up to my ham radio in the shack, but I must admit that the UofI's maps are far superior because they don't contain any noise.

Why not give London Underground a shout. Send the mail to any underground station (BakerStreet has the centre). They basiacally have VHF/UHF equipment and the antenna is a very long length of wire which just passes through the tunnels.

That is how they seem to do it.

How they actually do it may be another thing. Just write and ask ;)

At the same time, those of us here in the upper midwest were working into
Florida and southern Georgia. From western Wisconsin (grid EN44) I worked
the following stations:

0058 W4EMB EL95
0105 K2RTH EL95
0111 WB4YJG EL96
0115 WD4IXD EL98
0119 KE4BXT EM90
0126 N9SPO EM90
0129 WD4AFY EM92
0143 W4ZD EL97

I spoke to N0HJZ in Minneapolis, MN and he told me that he logged his first
contact at 2352. W4ZD was 20 dB over S9 when I worked him (I worked him on
my Icom 251 which has a terrible front end, even with a preamp), so things
were really hopping. The band started to fold shortly after I worked W4ZD,
but was still fading in and out until after 0200.

It's hard to say what else I could've worked had I been around when the band
opened up instead of an hour later. I kinda suspected something was up when
I walked into the living room and noticed a pretty good herringbone pattern
on the tv station my wife was watching. I've noticed this alot on the low
VHF channels when 6m opens up, but she was watching channel 8 at the time.

4457. new HAMCOM interface with optical isolation

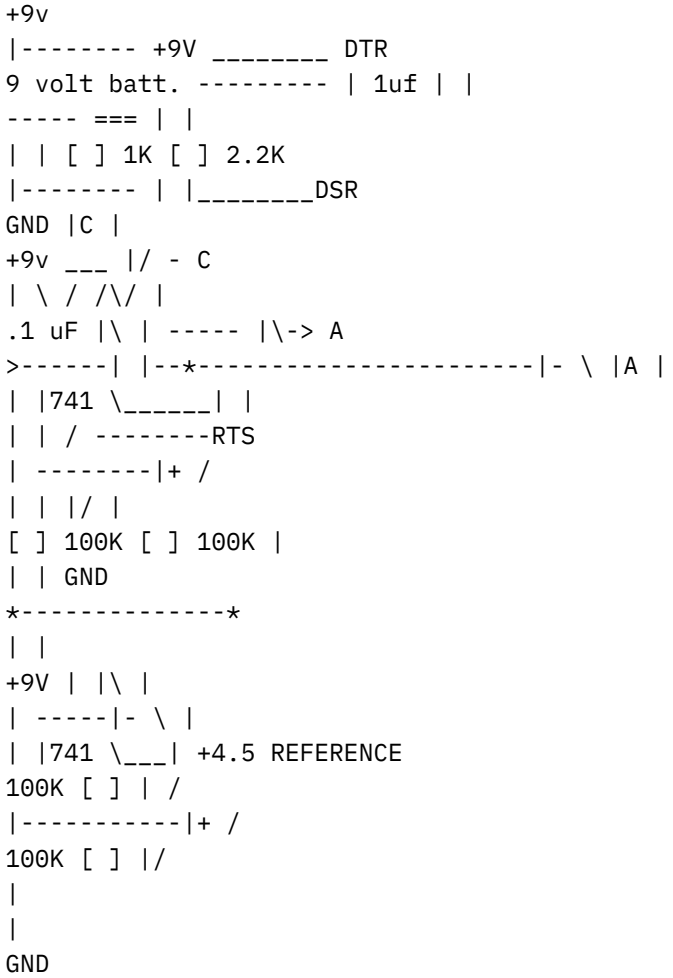
Newsgroup: rec.radio.amateur.misc
Date: 1994-06-23 15:06:59 UTC
From: copeland@metronet.com
Message-ID: <CruvBn.4MA@metronet.com>
Source record: 264658

Here are two opto circuit I've been playing with for HAMCOM/JVFAX.
They virtually eliminate all computer induced rfi. I've been using
a five foot serial cable and twenty foot audio cable with this
circuit and the results are truly remarkable with JVFAX.

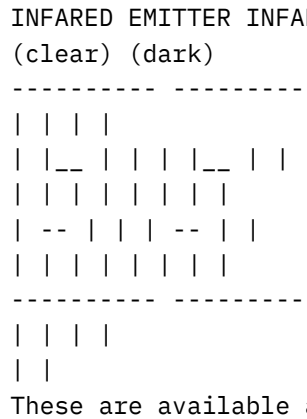
I've used the first circuit successfully, but recommend using the second.
The first can be built with common Radio Shack parts. The second requires
a little more uncommon LM358 and TIL181. The Radio Shack opto RECEIVER
is only rated at 20v but used at 24v and could eventually burn out.
It also may introduced problems since the +9v is not regulated and induces
error into the reference op amp output ... even though it seems to work well.

Perhaps some engineers out there may have some advice.

==========



==========

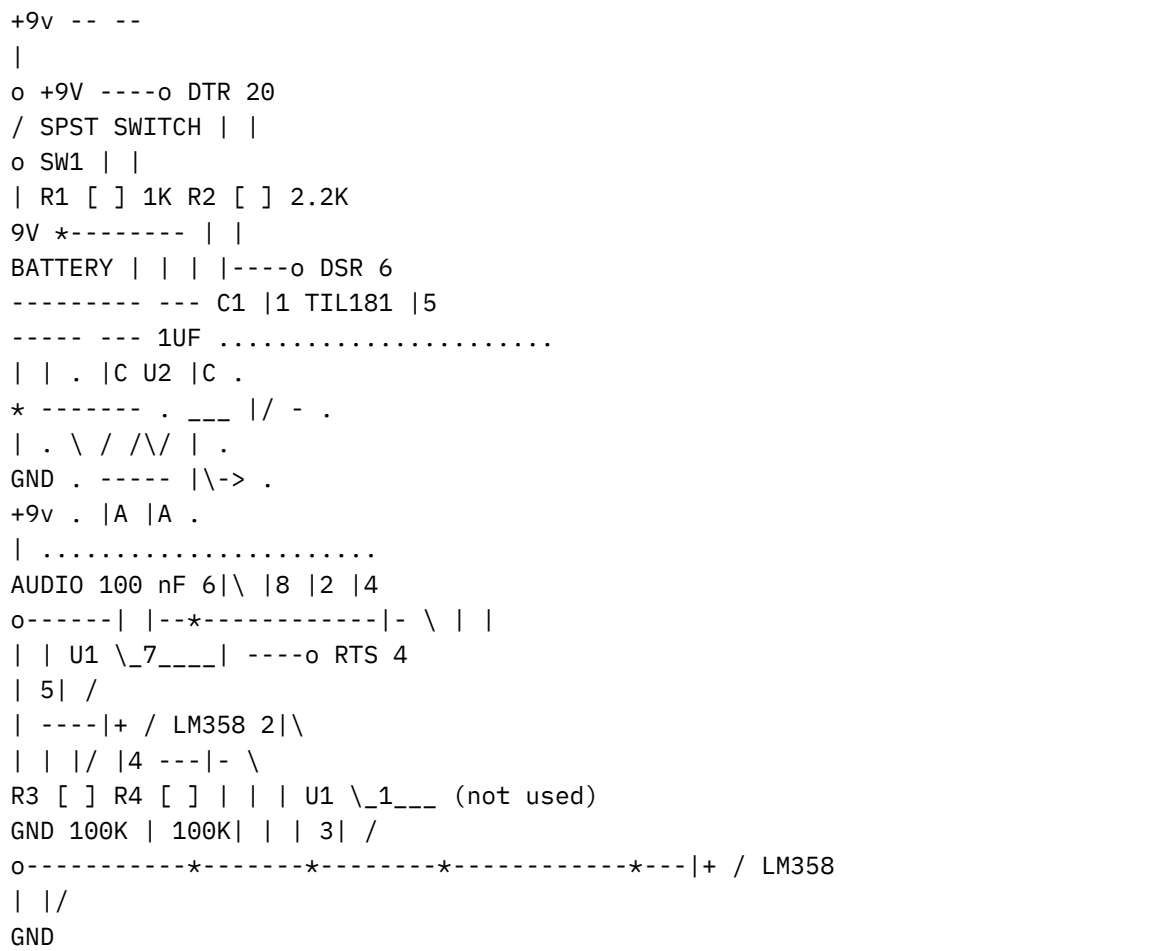


These are available at Radio Shack as a pair for $1.99 (#276-142).
This shows which is the Anode and which is the Cathode, not clear on
the package.

The LED and DETECTOR must be positioned right up against each other and
exactly aligned to get maximum light transfer. The sides with the little
lense like dots must be placed together.

==========

I'd recommend this second circuit for more stability and possibly accuracy.



```
================================================================================
| ** NOTE** |
| After constructing, measure LM358 pin 7 with no audio on the input. |
| It should be high (~8v), if it is low (~0v) it will drain the battery |
| in only 20 hours or less. |
| |
| To correct this: Disconnect R1 from +9v and reconnect to U1 pin 7. |
| Disconnect U1 pin 2 and reconnect to GND. |
| |
================================================================================
```

The LM358 is a single supply opamp and can be substituted with the LM2904, LM158, or LM258. (The dual supply 741 can not be used as a substitute.)

The opto isolator IC can be substitued for many other types. The 4N35 has been tested successfully. The discrete infared emitter/detector from Radio Shack has been tested successfully.

I tried to use a darlington opto (TIL113), but couldn't get it to work. A darlington opto circuit would only require 1.5ma average. That would make battery life about 133 hours. Maybe I'll try again later.

```
================================================================================
```
MORE NOTES:

The 9v battery could be substitued with a 9 or 12 vdc adapter. However I've found the clearest pictures occur when both the radio and HAMCOM are running off batteries ... at 6am 8).

A 9v battery should last about 50 hours while audio is present (assuming 200ma hours for a battery). If no audio is present the battery will last 400 hours.

The battery life could be a problem for people who leave HAMCOM running all night using the timed FAX option. Battery would only last a week.

If you have any advice or knowledge that could improve this, please let me know.

The KAM Plus is the best multi-mode controller available for the money,
and KaGOLD really makes it shine. I've used both for over a year, and
have had excellent results on VHF and HF packet, RTTY, AMTOR, and
PacTOR (haven't made a G-TOR contact yet, but that's only due to lack
of time to look for one).

You can't go wrong with this combination.

4460. Anyone USE DTMF Paging ?

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-23 15:49:31 UTC
From: uppal@cup.hp.com
Message-ID: <CruxAJ.J5A@cup.hp.com>
Source record: 264657

I thought initially that the DTMF Paging feature was a useful one.
(Enter your 3-digit code, that of the callee too and then your
handie rings when your code is recognized. The handie also tells
you who called). However, I am experiencing the following problems:

1. The alternate to getting paged is either sitting glued to your
handie, or setting up some time aforehand for a QSO. If you
do the latter, you conserve battery power since your handie
is not on most of the time. In the paged mode, you get the
extra convenience of not having to pre-setup a qso time.
You do have to leave the handie on all the time and you would
expect that current drain would be minimal until you are paged.
Unfortunately the current drain in receive with page mode
on is the same as normal receive regardless of who is
on the air (your callee or Joe Q. Random).

2. The two repeaters I have tried do not pass DTMF codes. So while
the paging works fine simplex, I have not been able to get it to work
thru a repeater. Is there a list available of the repeaters that are
DTMF page friendly ? (actually if I find just a couple in the Bay Area
I'd be happy).

So how do you folks use DTMF page ? Do you find it useful ?

Congratulations! Don't wait too anxiously; I assume you discovered your call by phone. Unless they've changed more than just the computer program, the licenses are granted on Tuesday and printed and mailed on Thursday. Don't be disappointed if it doesn't actually come till Saturday or Monday.

Don't forget that some repeaters will have a sequence to turn on pass-thru of DTMF tones.

There are a few people around here that consistently use paging, but only a few (maybe 6 in all). They seem to find it useful...

Yeah! Free advertising for W6BB!
I have to add that it's the NALCO group's show, too. They will be operating with us and in fact are contributing much (most) of the equipment for the exercise.

Park by LHS, trek over to the wall near the whale and DNA models in the courtyard, look down and wave. That will be us. W6BB monitors 146.43 MHz - simplex.

That's a good idea for those with MIDI or SoundBlaster/Adlib devices.
Could you post the code to output to the MIDI port? I imagine it could
be adjusted for the sound cards as well.

>continue to complain.

Furthermore, why don't people use this several week delay to do something positive? The day I passed the General exam, I went and bought the Advanced and Extra study guides and started memor^H^H^H^H^H preparing for those exams. As soon as the General license came, I upgraded to Extra.

It's rare for anyone to go from nothing to Extra in one day (hi Trevor), everyone else should be so flushed with success that they should start working on a higher code speed or studying the next license class stuff.

People could even - gasp! - listen to the radio in the intervening weeks, to see how HAM works (hi Julian), then perhaps we would have fewer posts that say "I just got my HAM license, what is a repeater and when should I listen for Australia on 160m?"

I have this vision of thousands of people who pass the tests and then just sit and stare at the wall for 12 or so weeks, with occasional breaks to call the FCC to find out what happened to their license application.

Sure, it's a long time to wait, but you can always go round to a local and do HAM from there to get the feel of things. If you are turned off the hobby because you have 12 weeks of staring at the wall ahead of you, you need to find another hobby anyway; you need a lot of patience in everyday operating - people won't answer your CQ, you won't break a pile-up in an hour of calling, the bands will be dead for several days and so on. Nothing happens as soon as you would like it to in HAM.

If, as someone said recently, there are 16,000 applications waiting to be processed and just one person doing them once a week, there is going to be a delay. The easier it is to get a license, the more people who will do it and the longer it will take. For the amount

you pay for the FCC work ($0.00) you get good value.

Best best wisheseses,

You're right, but the difference in current drain is very small.
I measured 5-8ma is the difference between no audio and
audio on to a resonable level both with squelch open. Perhaps,
most of the audio circuitry consumes power
regardless of input signal or maybe 8ma is reasonable (8ma*12V
is 96mW with 50% efficiency you get 48mW at the speaker).

We used DTMF paging for a little while and occasionally still do if we
don't want to be disturbed by normal frequency traffic. Add CTCSS to that
and you're all set.

The problem is that some repeaters either mute tones, or the audio quality
is so bad that the remote radio doesn't recognize them.

SB DX ARL ARLD037
ARLD037 DX news

The items in this week's bulletin are courtesy of Bob, WB2CJL, Pasquale, YV5KAJ, and the Contest Corral column in QST. Thanks.

SCARBOROUGH REEF. With an application for separate DXCC country status pending, a multinational DXpedition team has been organized by the Chinese Radiosport Association with JA1BK and OH2BH. The team plans to be on from June 24 to 26 with the first radio activation of this South China Sea locale. BS7H is the call sign issued by the Ministry of Posts and Telecommunication of the Peoples Republic of China, PRC. Landing permission has been granted for this operation.

ANGOLA/MALAWI. Peter, ON6TT, one of the 3Y0PI ops, has been assigned to the Red Cross as a Communications Consultant. He is now on the air as D2TT and has been worked on 18143 kHz at 1705z. Peter plans to move on to Malawi in mid July for three or four weeks. The call sign requested is 7Q7TT. QSL via ON5NT.

ASCENSION ISLAND. GW0FJT will be active as ZD8OK for about six months, starting around August 1. QSL via N8ABW.

AVES ISLAND. YW0RCV will be QRV from July 21 to 25 on CW, SSB and teleprinter modes, however no PacketCluster spots on our local node have appeared as of press time. Though billed as an all band effort, no WARC band activity is planned. This operation coincides with the 191st anniversary of the Venezuelan Navy and the 60th anniversary of the Venezuelan Radio Club.

BELIZE. Rick, AI5P, and George, WB5JHK, will be active from Ambergris Cay as V31PH and V31WE respectively, from July 7 to 14. This is IOTA NA073. QSL via their home calls.

NEW CONTEST. The first Russian DX Contest will coincide with the Goodwill Games to be held in Saint Petersburg. Operating times will be 2100z July 29 to 0900z July 30. Listen for the call signs R1GWG and R1MVI.

THIS WEEKEND ON THE RADIO. Dominating the airwaves will be the ARRL Field Day, which is from 1800z June 25 to 2100z June 26. Exchange Field Day operating class and ARRL/Canadian Section. Non US/Canadian stations exchange signal report and QTH. For full details check page 132 in May QST. Hq station W1AW will be in the fray. We hope to work you.

SP QRP International Contest, sponsored by the SP QRP Club, runs from 1200z June 25 to 1800z June 26. This CW only event is on 80, 40, 20, 15 and 10 meters. Exchange RST, serial number starting with 001 and power category, either VLP, QRP, LP or QRO. VLP is less than 1 watt, QRP is less than 5 watts, LP is less than 50 watts and QRO is 50 watts and higher. Complete info appears on page 118 of June QST.

There were a couple of postings lately about ads in the old ARRL Handbooks which reminded me of the following ad.

In the 1955 edition of the ARRL publication, Learning the Radiotelegraph Code, is an ad from Dale Electronic Distributors. Entitled: Dale Answers the Questions on Single sideband. The first question is, "Why go to Single Sideband?

He, Bill Cummings W1RMG, goes on to state that he has used his own 10 watt, SSB rig, to work all call areas W1 thru W0! WOW! :)

Thought you might enjoy it.

73, 74 (whatever it takes)

Ken

Just because people had to walk 50 miles, barefeet, uphill both ways,
in the middle of winter, to get to the test session back then doesn't
mean that the current system can't be improved.

I, too, am waiting for a new license but have only been waiting 2 weeks. Gee, I'm sooo excited about having to wait another 14! This is ridiculous. It's summer - why doesn't the FCC just hire some students to work on the cheap and clean up their backlog? I do pay taxes, don't I? I've never had my passsions inflamed by government beaurocracy, as some have, but then this is the first time I've ever had personal dealings with a goverment beaurocracy. It's enough to make me vote Libertarian...or for Howard Stern for President... or both!

Regards,
Ira

Hi Jesse, do you think maybe changing from present to absent changes the
amplitude and it is not a continuous wave when the key is up?

>There is no modulation of the cw, suppsoedly, except maybe for the rise
>and fall times of the signal maybe. . .--jesse

Keying a carrier on and off does indeed modulate the RF and generate
sidebands. You can't copy 20wpm CW through a 100 Hz wide IF filter
because some of the sidebands do not make it through the filter.
Keying a carrer on and off is actually Amplitude Modulation, not Continuous
Wave. The faster the rise and fall times of the RF, the wider the sidebands,
and the more key clicks you will have.

My point is, quite often, usage determines definition. Back in the '50's,
an AM conversation might end with, "73's, OM, and lay some 88's on the XYL".
This weekend is really the next weekend that will occur and next weekend
is the one after that, which is not next... figger me that one. :-)

> I'd be happy).

Well, most of the repeaters I use have ACC RC-850 controllers. They are
configured so that if you key up and press '#', then all other tones you
press until you un-key will not be muted. That way, I can sit in DTMF
squelch, and my friends can key up with '#225' for example, and it will
open my squelch and tell me somebody is looking for me.

:
: You're right, but the difference in current drain is very small.
: I measured 5-8ma is the difference between no audio and
: audio on to a resonable level both with squelch open...

For another data point, here are some quick measurements on an FT530:

Signal received (squelch open), volume at a reasonable level: ~105 mA
Signal received (squelch open), volume at quiet level: 90 mA
Signal received, paging mode on (squelch closed until code recvd): 80 mA
* No signal, paging mode on (squelch always closed): 70 mA
* No signal, non-paging, squelch closed 70 mA

In the last 2 modes (the * modes), the "smart" battery saver very
quickly drops it to 60 mA; within a minute or so it's down to
~30 and at 2 minutes its down to around 20.

Bottom line, having it in paging mode with a received signal versus
non-paging mode with a received signal saves anywhere from 10-25 mA.

On the meaning of CW:

F. Everybody's I., there's an interesting article in a recent QST that explains why it was originally called CW. From what I can remember, the older (back in the early part of the century) somewhat tunable transmitters could only generate a decaying rf sine wave when they were "keyed". A new type of transmitter was able to generate a "continuous" rf wave when it was keyed, these transmissions began to be called "CW" transmissions. So, apparently, the name "CW" had nothing specifically to do with Morse code when it was originally coined. Morse code back then was a given.

See the article for the real story...

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 23/2330Z JUNE 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 23 JUNE AND FORECAST UP TO 26 JUNE

IPS Disturbance Warning 17 was issued on 22 June and is current for
interval 24 June to 4 July

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 073/009

GOES satellite data for 22 June
Daily Proton Fluence >1 MeV: 4.9E+05
Daily Proton Fluence >10 MeV: 1.3E+04
Daily Electron Fluence >2 MeV: 2.4E+08
X-ray background: A1.4
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
24 June 25 June 26 June
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 070/005

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 22 June
Learmonth 04 2221 0121
Fredericksburg 04 08
Planetary 06 09

Observed Kp for 22 June: 2322 3232

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
24 Jun 20 Active.

25 Jun 20 Active.
26 Jun 20 Active.

2C. MAGNETIC COMMENT
Recurrent disturbance expected from 24 June onwards.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
23 Jun normal normal normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
24 Jun normal fair poor
25 Jun normal fair poor
26 Jun normal fair poor
3C. GLOBAL HF PROPAGATION COMMENT
Degraded HF comms conditions expected after June 24.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T index for 23 June: 25

Predicted Monthly T Index for June is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
24 Jun 30 Near predicted monthly values.
25 Jun 15 About 15% below predicted monthly values.
26 Jun 20 About 15% below predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Degraded HF comms expected at times during interval June 24 - July 4.

4486. hf radiation

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-24 01:42:47 UTC
From: jmollan@egreen.iclnet.org
Message-ID: <1994Jun24.014247.10908@egreen.wednet.edu>
Source record: 264380

Research has shown no evidence that there are harmful effects to nonpolarizing electromagnetic emmisions in the hf bands.

Picture, if you will, the average ham station, running 200 PEP watts for one hour per week. Compare this, if you will to a commercial broadcast AM station running 50,000 watts 24 hours per day. Now measure the total level of electromagnetic emissions received.

Even with the geometrically higher levels of emissions put out by the broadcast station, research has failed to document any adverse health effects to people living immediately next to the broadcast station's towers.

When it comes to UHF signals in the microwave areas, care must be taken, but these are not the frequencies (about 1000 Mhz) used by ham operators.

On My Alinco DJ580T dual band HT, it will go out of battery saver
mode when DTMF squelch is enabled. This is apparently so that the
radio will not miss the first tone in the sequence. A distinct
possiblity if it happens to be in "sleep mode" when the first
tone arrives. Thus, it would not see then entire sequence and
break squelch.

W6BHZ on the Internet

The Cal Poly Amateur Radio Club is now running a mailing list for members, alumni and any others that are interested. There are about 45 people now on this list, including 21 alumni! This interest has started a quest for W6BHZ alumni, and about 320 names have been compiled so far!

Please send responses to this mailing to:
w6bhz-request@oboe.aix.calpoly.edu

W6BHZ on the World Wide Web

The W6BHZ World Wide Web Home Page is growing in popularity as well. Since May 1st, the W6BHZ home page was the 9th most requested document on the Cal Poly WWW server! A combined total of 2216 requests have been processed for all of the W6BHZ documents. Take a look at the original request for club recognition submitted in 1947. It's been electronically preserved for all to see on the WWW. I'd like to encourage everyone to submit pointers for inclusion on the page. Also, submit our pointer to your local WWW servers and anywhere else that may get us exposure. Let's make W6BHZ known! I've been averaging about 2 new alumni per week that are responding to the WWW page. Here's our URL:

http://www.calpoly.edu/~dmalone/w6bhz

FIELD DAY 1994: (This information can also be found on the WWW)

We will be heading up to the fire lookout tower on Hi Mountain again this year. Hi Mountain is located in the Los Padres National Forest, near San Luis Obispo, California.

This is almost exactly where we will be:

Longitude: 120 Degrees 25 Minutes North
Latitude: 35 Degrees 15 Minutes West
Altitude: 3180 Feet

We will be running 2 Alpha in Santa Barbara.

Everyone is welcome to come and visit. Talk in will be on 444.525+ (pl127.3) or 146.52 (simplex). If we don't respond, send a DTMF "123" on 146.52 to get our attention. There is a gate we will have to come down and open for you.

Listen for our call on 40 meters (7.225-7.245) at the following times:

(All times Pacific Daylight Time)
12:00pm 4:00pm 8:00pm 12:00am 4:00am 8:00am

Listen for us on 146.52 as well, we will be line of sight to most of the hills in the bay area as well as Fresno area. We will be running packet on 145.03. Possibly ATV on 443.00 or 439.25, so you can watch for us too!

4492. Re: Astron Power Supply

We run a Custom Astron 35 after having this problem and others at a remote mountain site. We feel that the stock supplies were being forced into crowbar due to high transient voltages on the power lines. Prior to having Astron due some custom protection stuff to the 110 side, we had our controller cycle the AC to the supply off/on every 6 six hours to reset the crowbar in case it had engaged. Since Astron did this spiffy work on our 4th new supply, we have had no PS related problems in the last 23 years.

Contest report

Our contest manager Jim VK2BQS says that the contest seemed to have plenty of stations working despite the bad conditions due to this stage in the solar cycle.

Jim has one hard-luck story, though. He was taking a rest break, had turned off the transmitter but left the receiver running to the screen, when -- up came a ZA station calling CQ Contest. Jim could not believe his eyes but was unable to get on air in time as the ZA station faded into oblivion after only a couple of minutes. He hopes that others worked that station even though he missed out. Them's the breaks - oh well.

The first log has come in already. Don't leave yours too long if you have a slow postal system. Make sure it arrives in plenty of time.

INFORMATION ON NEW ZEALAND AMATEUR LICENCES 11 June 1994

The Ministry of Commerce supplied the following summary figures of numbers of amateur licences for each grade. The first samples are at various times from July 1991 to October 1993, while the second samples are as at the 1st of the month from March 1994 onwards:

Grade	Jul91	Oct91	Apr92	Jul92	Oct92	Apr93	Jul93	Oct93
General	4089	4082	4062	4066	4087	4090	4097	4066
Lim+Nov	67	74	73	76	67	76	75	80
Limited	1966	2059	2034	1981	2109	2129	2111	2197

Novice 37 39 39 42 44 41 41 37
==== ==== ==== ==== ==== ==== ==== ====
totals 6159 6254 6208 6165 6307 6336 6324 6380

Grade Mar94 Apr94 May94 Jun94

General 4060 4057 4063 4061
Lim+Nov 81 82 84 86
Limited 2181 2222 2211 2207
Novice 39 38 38 40
==== ==== ==== ====
totals 6361 6399 6396 6394

COMMENTS ON AMATEUR LICENCE INFORMATION:

* Figures are snapshots in time of licence data, of different comings, goings and upgradings. Additions are mainly following March and September examinations, while attrition is somewhat continuous. Morse tests are available on demand.

* The real situation of component data changes (by additions, amendments and deletions, as can be seen regularly published in Break-In) are rather more dynamic than can be found by direct inspection of the above summary figures.

* A study of call sign deletions over the latter part of 1993 indicated a rate of attrition close to 4% per annum for each of General and Limited grades (possibly indicating that rates of loss of interest, incapability or mortality are similar throughout the amateur community).

* If the rate of attrition is taken as 4% p.a., then estimated rates of addition (to tie in with the licence totals) are:

3% addition per annum for General, so net "growth" is -1%

8% addition per annum for Limited, so net growth is +4%

5% addition per annum all licences, so net growth is +1%

Bob ZL2CA

Editors note -- recently I attempted to obtain similar figures from the SMA, only to be told they were not obtainable and to ask the WIA.

Why cant these figures be extracted from the SMA database on request? Once upon a time not that long ago, these figures were regularly released -- why not now? They are just licence classes and should be retrievable without any trouble. I did want the figures for use in this broadcast, so the enquiry was legitimate. Maybe this procedure can be revised in the future.

Are auroral sounds a real physical effect? by Colin Keay

It is very likely they are produced in a similar way to the rare examples of instantaneous sounds from very large meteor fireballs, which were a mystery for more than two centuries. Very briefly, the turbulent plasma wake of the fireball excites electromagnetic waves in the Earth-Ionosphere cavity. The allowed modes lie in the kilohertz region of the spectrum. In the case of a fireball as bright or brighter than the Moon, megawatts of em energy are produced and the electric vector is strong enough to excite acoustic vibrations in suitable objects, such as loose hair or frozen pine needles. The resulting sounds are heard as hissing, swishing or crackling by anyone in close proximity.

This explanation was developed by me to explain the widely perceived sounds from the huge New South Wales fireball in 1978. It was published in 1980 in SCIENCE. I was quickly able to prove in laboratory tests that rapidly varying electric fields could be heard provided there was something near the observer to act as a transducer. Even wearing a pair of glasses could raise a subjects threshold by 3 or 4 decibels. Later tests with mundane materials in an anechoic chamber verified that all sorts of objects could respond to rapidly fluctuating electric fields and produce faint sounds.

Detection of the ELF/VLF em radiation from a meteor firball was a much harder probelm because such events are very rare. The Japanese succeeded, publishing proof of the existence of such radiation in 1988. This has finally laid to rest the fallacious conventional wisdom that instantaneous fireball sounds are psychological in origin.

The same is probably true for auroral sounds. They only occur during extremely intense auroral displays, when, according to Olsen (Pure and App. Geophys. 84, 1971) abnormally high electric fields have been measured. Very rapid fluctuations in such fields excite the audible sounds if suitable transducer materials are present. I am sure that attempts to record auroral sounds on a tape recorder, with a microphone lying on the snow, failed because there was nothing nearby to act as a transducer. If the microphone had been placed under a pine tree instead of out in the open the result may hav been very different.

A similar process explains the occasional report of a person hearing a -vit- or -click- at the instant of a lightning stroke before the crash of thunder. Also explained are the rare reports of earthquake sounds just before the seismic shock and the alarm of animals at such times.

These findings open up a whole new field of scientific inquiry which I call geophysical electrophonics. There are no commercial applications in sight yet, but the scope for interesting research is immense.

from IPS Radio and Space Services Solar-Geophysical Summary May 1994

IPS weekly report
---
10 June - 16 June 1994
Issue No 24
Date of issue: 17 June 1994

INDICES:
Date 10 11 12 13 14 15 16
10cm 85 86 86 85 85 88 88
A 16 15 26 12 15 09 (05 estimated)
T 36 53 53 42 44 51 47

SUMMARY OF ACTIVITY

Solar activity was low on 15th June and very low for the remainder of the period.

The geomagnetic field at Learmonth (WA) was unsettled to active on 12th, quiet to unsettled 10th-11th, and 13th-15th, and quiet on 16th. There was one active period on 11th.

Ionospheric F2 critical frequencies at Sydney were mostly near predicted values, with slight enhancements on 11th-12th June, and up to 20 per cent enhancements on 15th-16th.

FORECAST FOR THE NEXT WEEK (17 - 23 June)

SOLAR: Very low to low.

GEOMAGNETIC: Active 20-21 June, quiet to unsettled otherwise.

IONOSPHERIC: Near normal to slightly enhanced.

Courtesy of IPS Radio and Space Services, Sydney

For your information

There have been no M-class solar flares reported since 27th February this year.

After a very successful F.A.R.E. 1993, with close to 3,000 people attending, F.A.R.E. 1994 will be bigger and better! F.A.R.E. is the Family Amateur Radio Event happening on the ARRL's Ham Awareness Day, Saturday, September 17, 1994. More children and spouses attended last year's event than all other hamfests in Arizona combined! Ronald McDonald appears for the kids, as well as face painting, bird show, and so much more. There's a swap meet starting at sunrise and the exhibit hall opens at 9:00am. Commercial exhibitors are there, as well as "hands on" for all displays. Such as:soldering exhibits, cw sending, packet, pactor, ATV, MARS station, HF station, The Red Cross Team, The Salvation Army Emergency Radio Team, AMSAT, public service, and so much more. E'mail me for more info.

We did double-check - it worked, but very poorly. Tried it on a
couple of bands with similar results.
Just for grins, last night my wife (WV9K) *did* use a short antenna
that worked nearly as well - an 8 inch alligator cliplead dangled off
a 50 ohm resistor. With 70 watts peak SSB, she got S-4 receive
reports from the 20M Maritime Mobile net control, and 3x3 reports from
Ohio and Alabama on the 40M 3905 Century Club net (we left early due
to a t-storm).
We've had *much better* luck with short wire dipoles thumbtacked to
the ceiling, and they're *much* cheaper than the loops (and a lot more
easily packed for a trip). Perhaps the loop advocates are unwilling
to admit they might have been somewhat mislead by the advertising
claim ?

...After enjoying the privileges of marriage, you tell the XYL, "Gee, hon,
that was almost as much fun as working a new country."
--Bob Dillon, WB9LTN

And she agrees with you. (Even if she isn't licensed.)
--Jay Maynard, K5ZC

Actually that's the time to take up more interest in the hobby. When
you're not busy looking for a new XYL (or just housing), that is ... ;-)
-- Lou Williams, KE4ARM

...IN THE SHACK...

...you can hold a discussion with your spouse, respond to a packet message,
and carry on as a CW NCS, then wonder where you left your coffee.
--Larry Williams, KD6OZK

...You spend 2 hours trying to crack a pile up on 20 meters to work
a KJ2 station who is portable on Manhatten Island.
-- Paul Valko, WB8ZJL

...You'd rather send someone a packet radio message on the 2-meter
band when you [well know] they also have a fully functional
answering machine on their phone line! My wife loves that one!!
--Kevin Jessup, N9SQB

...[Your] printer identifies itself when power[ing] up [your]
computer system, as di dah dah dit.
--Phil Emerson, AA8JO.

Actually, when printing out my budget spreadsheet, I can't help but notice
the: di di di dit dah dah dah
di di di dit dah dah dah
di di di dit dah dah dah etc.
coming from the printer. Any coincidence? (It *was* a Christmas present)
--Lou Williams, KE4ARM

...You actually USE the alarm-clock feature in your Handie-Talkie so
that you can, "Wake up to your favorite net or repeater."
-- Paul Valko, WB8ZJL

...You think it really matters if someone says 73's instead of 73.
--Ed Hare, KA1CV

...ON THE PHONE...

...[You say] "73" instead of "good bye" on the landline.
--Stephen P. Baker, KD1PF

...your wife starts talking to you while your on the phone, and you tell
the person on the other end you're getting intermod.
--John C. Wren, KD4DTS

...somebody asks you over the telephone "can you hear me okay"? and you
in return give them a signal report.
--Christopher Ogren, NM1Z

... you're talking on the phone with a ham buddy, and you end the
conversation and hang up the phone with a 'KD1HZ clear'.
--Michael P. Deignan, KD1HZ

At least you weren't saying grace over a meal with your family!
N4TMI clear, er, I mean, Amen...
--Michael Covington, N4TMI

...You answer your phone, "QRZ?"
-- Mike Gauland, AA7JF

And, after you find out who the calling party is, you say "your 59
in Virginia..."
-- Ben E. Cline, AC4XO

Don't laugh, I know someone who did that with his telephone answering
machine.
-- Kok Chen, AA6TY

I do get a laugh when my wife ends a conversation on the cell
phone with "KI5EV". Wonder what the people on the other end think.

My oldest son slips only when leaving messages on our answering
machine. He caught himself at it the other day and the recording
went something like: "88s mom, this is N5 unh <chortle-snicker>".

Of course, _I'd_ Never do such a thing!
--Ed Humphries, N5RCK

...ON THE STREET...

...you end a face-to-face conversation with "dit dit".
--Paul Flaherty, N9FZX

...you use "Destinated" in a sentence.
--Greg Dolkas, KD6GKW

...when you say things like "QSO" and "73" in casual, face-to-face
conversations.
--Mike White, N4PDY

...[You mean] to say "okay" to someone, but mistakenly say "QSL".
Very embarrasing. :)
--John Maultsby, KE4CLW

...You go shopping, get to the check-out, write a check, and sign it KE3HO.
--James E. Proctor, KE3HO

...To get your ham buddies attention (who lives across the street), you
yell 'CQ! CQ! CQ!' from your driveway.
--John C. Wren, KD4DTS

And your friend responds "QRP station, stand by...." heh heh heh.
--Bill Coleman, AA4LR

...You are in your car, and see somebody you know walking down the street.
Instead of going beep-beep and waving, you pound out CQ on your car horn
and wave.
--Ed Bathgate, Awaiting Technician License

...[you] send "CQ" on my car horn to get my wife's attention when [you] pick
her up from work.
--Steve Hideg, N8HSC

...You're sitting outside somewhere, and you notice you've been hearing
"O O O O O O," just a constant string of the letter "O," and
for quite some time. Not consciously - it just popped into your
head - and you start to listen to the surroundings...and there's
a bird singing "OOOH OOOH OOOH," over and over and over...
--Scott Rosenfeld, NF3I

... you wonder why trains always send a "Q" before they pass a RR crossing.
--Greg Bassett, KJ6EP

...[you] Listen to the "you left your key in the ignition" alarm on
a Honda sometime [, ... and you realize] it's the letter H in Morse!
--Joe Salemi, KR4CZ

...AT WORK...

...you're talking on an EMS telemetry radio with a base hospital for
medication orders and such, and sign out with your callsign...
No, I didn't do this, but N5JXS swears he did, and that he got a callsign
back...
--Jay Maynard, K5ZC

...[You] work at a radio station and answer the phone with YOUR callsign
instead of the station's callsign.
--John Maultsby, KE4CLW

...you're talking to somebody face-to-face in a busy place and you say,
"Let's QSY my office," and they know exactly what you mean!
--Doug Renze, N0YVW

...u find urself typing in cw shorthand to fellow wrkers on internal
email...(I hve found myself doing this too many times)... ...u tell
people over the phone "I'm at my work QTH"...
--Fred M. Davis, VA3FD

What about just a simple 73? I keep typing 73 only to
realize that I either have to:
1... edit it back out and add a more verbose ending, or...
2... explain what it means (which is often more verbose than #1).
However, its always fun to reply with a few OF's in there, and have
them ask what it meant!
--Warren W. Gay, VE3WWG

...when you're boss starts babbling about something and you wish you had
a VFO instead of this xxxx crystal on his frequency so you could tune off.
--Christopher Ogren, NM1Z

... AT PLAY ...

...You name your boat Sea Cue (not once, but twice).
--Robert Carpenter, W3OTC

... AND ON THE INTERNET ...

...when you start taking posts on rec.radio.amateur.misc seriously... :-).
-- Roger Buffington, AB6WR

- Compiled and edited by Jeffrey S. Johnson, KF8UW, from
- messages under this topic on the internet USENET
- rec.radio.amateur.misc bulletin board. Some of the callsigns
- associated with the names have been obtained to the best of
- my ability but may not necessarily be correct. If your name
- is in the listing, and the callsign is wrong, please address
- your correction to johnsoj@autsb.allied.com. If any further
- issues are released, your name will be corrected.
-
- You are free to distribute this document to other newletters,
- packet mailboxes, and bulletin boards, as long as the credit
- is given to internet's USENET rec.radio.amateur newsgroup, and
- to me. Special thanks to Michigan State University for
- sponsoring public access gopher.msu.edu from which I obtain
- the USENET news and to the University of Texas which sponsors
- the mail to USENET gateway through which I post messages.
-
- Thank you to all whose comments I have included in this list.
- Jeff Johnson, KF8UW
-
- P.S. You might want to print this out and take it
- to read at a club event. Look for W8MAI 2A MI on field day.
- That is the call my club, the Blossomland Amateur Radio
- Association located in Berrien County, MI, will be using.

4505. Re: Licensing delays

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-24 13:24:34 UTC
From: vinod@watson.ibm.com
Message-ID: <2uemqi$156g@watnews1.watson.ibm.com>
Source record: 264555

In article <2ucnla$grp@geraldo.cc.utexas.edu>, oo7@astro.as.utexas.edu (Derek Wills) writes:
|> Furthermore, why don't people use this several week delay to do something
|> positive?

I think most people do this..they don't really sit and stare at th
wall, thinking that this is the spot to hang my licence.

For example, in the time I have been waiting, did the following:
1. Started studying code, and passed the 5wpm test.
2. Got the General class manual, and started reading
3. Researched available 2m radios, bought a used HT, and listen
to nearby repeaters, especially the traffic nets etc.
4. Currently looking into getting an HF radio.
5. Attended a nearby radio club meeting

However, you get kind of bored with waiting for three to four months
without being able to really participate in the hobby. Certainly, the
excitement I had during the first month after I got my licence has
worn down some. I don't mind waiting couple of months, but waiting
four months or more is a real pain!

4511. Why so many transistor types?

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-24 14:43:44 UTC
From: HWells.El_Segundo@xerox.COM
Message-ID: <"24-Jun-94..7:43:44.PDT".*.Hugh_E._Wells.El_Segundo@Xerox.com>
Source record: 264566

>If you think there are many different transmission line impedances, ponder
>this:

>Why are there so many transistor types??

>73 de Jack, K9CUN

The reason for so many transistor types is that engineers are going to do it
over and over again until they get it right!!

Hugh Wells, W6WTU

4512. Re: Bitching and Moaning

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-24 15:00:05 UTC
From: cantrell@sparky1.aero.org
Message-ID: <2uesdl$chp@news.aero.org>

>launch.
>Lad Nagurney WA3EEC

well, for just general monitoring of what's going on, i'd suggest just
listening to the K4GCC repeater 146.94 MHz in titusville. mission control
audio is retransmitted there. I don't know if the ATV guys will have nasa
select up on their repeater or not.

Does anyone have a listing of the word equivalents for the alphabet (alpha=a, bravo=b, etc) they could post or email?

I'm working with a voice command system on a PC, interfacing to an application that requires you to pick from a menu list of options. The options are presented as an a,b,c,d.... list, and you pick the option by entering the letter of the option you want. This works fine if you're using a keyboard, but the voice recognition system is having trouble distinguishing between the single syllable sounds of individual letters (b sounds like d, d sounds like p, etc).

The recognizer doesn't have problems with longer utterances, like words -- so what I want to do is equate spoken words with letters. Rather than make up my own list, I want to use a standard convention. Thanks.

: Optimum with respect to what?

With respect to a fixed outer conductor diameter. You do have to be a little careful about the "max power handling capability." It depends on whether the line is voltage limited or temperature-rise limited. In a pulsed application, it may be voltage limited; for CW, it generally will be thermally limited.

And although (3.) may have been originally chosen as a compromise, it is also very close to the minimum attenuation (for fixed outer conductor diameter) configuration for lines with solid polyethelene dielectric, and close for solid Teflon.

All this also assumes the same resistivity for the inner and outer conductors, which isn't always the case; a higher resistivity in the outer conductor than in the inner shifts the minimum-attenuation impedance higher (though not much in practical cases like aluminum-outer, copper-inner).

Since I've never actually seen any 35 ohm line that I'm aware of, I started wondering just how "standard" that standard value is. I looked in a table of over 300 RG-xx/U cables, and found only one below 35 ohms (RG-73/U, at 25 ohms), and three around 35 ohms (RG's 83, 100 and 264). The next lowest impedance was 48 ohms, with a big cluster from 48 to 52 ohms (most nominally 50), and another big cluster from 72 to 78 or so. But there are some in the 60's and 90's, and a couple above 100; the highest normal line was 150 ohms, and some spiral-inner-conductor delay lines were in the 950-1530 ohm region.

Of course, if you have deep enough pockets, you can get a cable made for you in any impedance you want probably from below 10 ohms to perhaps 150 or very slightly above (for straight line, not spiral conductor). But the "standard" values do cover the range pretty well. On the other hand, if you want one of the rarer ones, you may have to buy a whole production run of it...

Doing this in an uncontrolled manner will disturb many repeaters who are linked. You send an innocent code to open up the squelch of you HT and in the process that same code could turn off a repeater, break a link, start a phone patch, etc.

NEVER, NEVER attempt to pass DTMF tones on a repeater without talking to the control operators first. Your little test could have disasterous results.

As a result of hams trying this feature with out permission, many ACC repeater owners have disabled this feature (myself included), because they do not want unathorized activity on the repeater.

Remember, when you use a repeater you are using someone else's equipment and license... It is like going over to a friends house for a visit!

While I don't doubt for a moment you've had nicad failures, I seriously doubt that those failures were due to memory.

There are a host of other abuses you can put to nicads to cause them to fail. Many of them are much easier to produce than nicad memory. You need dozens of cycles to cause memory. Modern nicads may need hundreds of equal cycles. Most hams who claim "memory" had failures after a couple of cycles. Can't happen.

Case in point. I used the same electric shaver for nearly 10 years. Every day, I'd shave for roughly the same length of time. Even after 10 years of daily 2-3 minute cycles, the same nicads were still good for a weeks worth of shaves.

Nicad "memory" is extremely rare.

I am a ham who just landed a job in Brno in the Czech Republic as an English teacher, and have some questions about hamming over there.

First of all, is it fairly easy to get a reciprocal license as an American to operate there? I asked the ARRL to send me a packet, but they haven't yet.

Will I be allowed to bring my IC-W2A over there? This HT can receive from about 100 - 1300 MHz and transmits on the 2 meter and 70cm bands. Unfortunately, it has been modified to transmit out of band, so it will also transmit fairly far outside of band.

Do you know of clubs or contact people in the Brno area? I'm interested in getting in touch with a local club over there.

Thanks so much.

4530. Re: Lead Acid Storage Batteries

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-24 20:34:09 UTC
From: brian@nothing.ucsd.edu
Message-ID: <2ufg01$39g@network.ucsd.edu>
Source record: 264483

[first posted a few years ago]
I've been doing some research on lead-acid batteries with an eye towards using them to provide power for our ham radio repeater site.

Our site is difficult to get to, and the commercial AC mains power goes away at times. Everything in the site runs off a nominal 12 volts DC. During idle periods, the equipment may only draw a few amperes, but most of the transmitters can draw up to 10 to 15 amps each. A maximum drain of 100 amps isn't out of the question, although it would probably be only for a few minutes at a time. Some systems (such as the digital communications equipment) key on and off quite regularly, with perhaps as much as a 50% duty cycle, whilst others may not key for hours and then stay on for as long as an hour or two (voice repeaters during drivetime). We do not want there to be any interruption of power when the mains fail. We don't believe that most of the outages are of a duration that a generator will be necessary - a few hours is sufficient.

It is clear that a good solution to our problem is a bank of lead-acid batteries capable of supplying the peak current, floating across a supply that can recharge them and supply the standby and perhaps one or two transmitter's demand.

Ok, that's the problem. Here's what I've found.

Lead-Acid batteries commonly available today can be roughly grouped into three categories by construction and intended use:
1. Automotive starting
2. Traction
3. Stationary

Automotive starting batteries are formulated with thin pasted plates and are designed to supply high peak currents for brief periods of time whilst cranking an engine. They are not expected to be discharged to more than perhaps 75% of capacity, and are expected to be recharged immediately after discharge. If used in deep-discharge or float service they will not last long. (I.e., the capacity of the battery will diminish fairly quickly. While it will still act as a battery, it will not be able to supply its rated capacity soon after being placed in the wrong kind of service.)

Traction batteries are made with thick pasted plates and have very rugged separators between the plates to make the battery more immune to physical shock and vibration, and to reduce the chance of failure due to dendritic growth during recharging. These batteries are sold for use in electric forklifts, golf carts, marine trolling motors, and RV

power. They are designed to be discharged nearly fully each day, and recharged each night. Because there is some tradeoff in battery life by using the pasted plate construction to keep the size and weight of the battery down, they are not used in applications where extremely long life is required. The commonly-available Deep Cycle Marine batteries are of this general type.

Stationary batteries are made with thick solid plates. They are designed to be used as standby power, supplying minimal power and kept in a state of nearly full charge until needed. They can take deep discharge. Because of the solid plate structure, they are bigger and heavier, but their lifetime is much longer. One source suggests that 10 years is not unusual. Some photovoltaic storage batteries (for solar-powered homes and such) are of this type.

The best battery for our application is the Stationary battery, but they are not commonly available. Much more readily obtained are the Marine/RV batteries, at about $50 apiece.

Charging and discharging these batteries is a big question. I posted a query to the net and received about a dozen replies, most of which contradicted each other in one or more points. However, there is some consistency in the information available in our library, and I'll try to summarize it below.

Note that all the voltages given below are for batteries at working temperature - typically 80F (27C).

DISCHARGE:

Batteries are rated at an Amp-Hour capacity at a specific rate. For traction type batteries, this is typically a five hour rate, so a fully-charged 100 Ah traction battery in good condition can supply 20 amps for 5 hours before it is exhausted. Stationary batteries are usually rated at a 10 hour rate, and automotive (if rated in Ah at all) are given for a 20 hour rate. The discharge curve is NOT linear; if you double the current drain, you will get less than half the time. Similarly, if you halve the drain, you will get more than twice the time.

Each type of battery has a specified voltage at which it is considered completely discharged. If discharge continues below this voltage, the battery life may be considerably shortened, and repeated abuse of this kind can result in a battery which cannot practically be recharged. Each battery manufacturer specifies this voltage; in general, the final voltage for the three general types of batteries are

automotive 1.75 v per cell
traction 1.70
stationary 1.85

Thus a typical 12 volt marine battery with 6 cells should not be discharged below about 10.2 volts.

Another way of looking at it is that no cell should be discharged more than about .3 v below its full-charge rest voltage.

A typical cell will show the following voltages:

fully charged, open circuit, at rest with no
charge/discharge for at least 12 hours 2.12 v/cell

As soon as load is applied (internal v-drop) 2.00

fully discharged, under load 1.70

fully discharged, open circuit 1.99

beginning of charging 2.10

70% to 80% charge (gassing begins) 2.35

full charge 2.65

CHARGING:

Liquid-electrolyte lead-acid batteries can be recharged at any rate that exceeds internal and surface discharge rates, and which does not cause excessive gassing (liberation of oxygen, hydrogen, and steam).

In non-float service, there are several simple chargers.

A single-rate (constant-current) charger limits its charge rate to about 7% of the Ah capacity of the battery; for a 100 Ah battery, it would charge at a rate of 7 amperes. Since the battery will start at about 2.1 v per cell, and finish at about 2.7 v per cell, the charger must be able to vary its voltage over this range. For a "12 volt" battery with 6 cells, the charger will need to supply between 12.6 and 16 volts over the duration of the charge. Charging is complete when the battery reaches 2.65 to 2.7 volts per cell.

A simple taper charger is a constant-voltage source set to 2.8 volts per cell with a series ballast (typically a resistor, but a choke or the internal resistance of the supply can be used) that limits the output current to 7%C when the battery is started charging at 2.1 v/cell. Again, charging is complete when 2.7v/cell is reached.

Trickle-charging of a fully-charged battery can be done to keep it charged. This is done by supplying .5 to 1 mA per Ah capacity. Trickle charging should be discontinued when it has continued for at least 24 hours and the battery has reached 2.25 v/cell. Typically, trickle chargers are set to run perhaps once a week. Because of their thin plate construction, automotive-type batteries will deteriorate if trickle-charged for more than perhaps six months.

An interesting research result was that using pulsating rectified AC or superimposing a small AC current on pure DC charging current increased battery life by up to 30%. Apparently the mechanism is that is reduces gassing and leads to a more porous lower-resistance plate, and lessens the tendency to form dendrites during charging.

In float service, where the battery is in parallel with the mains supply, the supply voltage must be set to 2.15 to 2.20 v/cell. This will charge the battery, and avoids excessive gassing, but does not serve to "freshen" the cells - there is not enough gassing activity to move electrolyte around and clear the beginning of deposits from the surfaces of the plates. It is recommended that batteries in float service occasionally (perhaps once a month) be charged to 2.65 v/cell to freshen and equalize the charges. In large installations, this is done by switching parts of the battery banks out of service in rotation. In smaller systems that can tolerate the voltage excursion, it can be done by simply boosting the output of the mains supply.

Charging inevitably leads to some water loss due to gassing; 100Ah of a gassing charge (2.4v or more per cell) will yield about 1.2 oz of water loss. Hydrocap Corp [975 NW 95th St, Miami Fla, (305)696-2504] makes a replacement filler cap that contains a catalytic material that recondenses emitted steam, and recombines the hydrogen and oxygen gasses into pure water that then dibbles back into the cell, greatly reducing the required maintenance. With the available flame arrestor option, they sound ideal for unattended battery systems, and should greatly reduce the danger of fire and explosion from liberated hydrogen. They're about $5-$10 per cell.

During my limited available hamming time, I probably listen 90-95% of the
total. AND, when I transmit it is in a mode (CW, or SSB) where power output
is not continous, as it is during AM or FM (including TV) broadcast.

*** now compare that with a 12KV (or higher) power line running directly
over your house, 24 hours a day. THATS what I'm worried about!

Cross-posted to: aus.radio,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 24/2330Z JUNE 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 24 JUNE AND FORECAST UP TO 27 JUNE

IPS Disturbance Warning 17 was issued on 22 June and is current for
interval 24 June to 4 July

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 073/009

GOES satellite data for 23 June
Daily Proton Fluence >1 MeV: 7.3E+05
Daily Proton Fluence >10 MeV: 3.3E+04
Daily Electron Fluence >2 MeV: 3.2E+08
X-ray background: A1.7
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
25 June 26 June 27 June
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 075/013

1C. SOLAR COMMENT
The coronal hole that has been causing the recent lengthy
disturbances appears weaker in xray images.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 23 June
Learmonth 03 2112 1011
Fredericksburg 05 03
Planetary 06 05

Observed Kp for 23 June: 1110 1332

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
25 Jun 16 Unsettled to active.

26 Jun 20 Active.
27 Jun 20 Active.

2C. MAGNETIC COMMENT
Expected increase to active levels did not occur. However, active
periods are still expected, even though hole appears weaker.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
24 Jun normal normal normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
25 Jun normal fair poor
26 Jun normal fair poor
27 Jun normal fair poor
3C. GLOBAL HF PROPAGATION COMMENT
Degraded HF comms conditions expected after June 25.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T index for 24 June: 25

Predicted Monthly T Index for June is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
25 Jun 20 Near predicted monthly values.
26 Jun 20 About 15% below predicted monthly values.
27 Jun 20 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Strong sporadic E observed at times, spread F observed during local
night. Due to geomagnetic activity not eventuating now expect mild
depression on 26th. Degraded HF comms expected at times during interval
June 24 - July 4.

CL> bedrooms, and
CL> right at 120 feet from where we sleep. I know from the lights in her
CL> house
CL> (and my FM radio, which is suddenly being blown off the air) that she
CL> does
CL> most of her transmitting between 10pm and 2am, while my family and I
CL> sleep,
CL> right in the plane of the antenna.
CL>
CL> Is there any risk here?

Not much. It will make you impotent, and cause your wife's clothes
washer to require constant repair. Ever heard of Jimmy Hatlo? (not
Hoffa, Hatlo!)

CL> It also happens to be precisely between the only place I can put a TV
CL> satellite dish, and the SE sky. Have I just lost my access to the
CL> satellites,
CL> or will I be able to "see through" the antenna.?
CL>

Depends on weather or not the "bird" you want to see is blocked. Depends
on how big the individual elements of her antenna is, and how big your
dish is. The dish collects signals form the satallite on its entire
surface and concentrates that energy at the feedhorn by parabolic
reflection. Unless all of the signal is blocked, it should still work,
at some (maybe not even detectable) degradation of signal. "Birds" to
either side will not be affected.

I know that spelunkers (cave explorers) use VLF frequencies for communications from the surface to the cave. They certainly can't avail themselves of preinstalled leaky coax, etc.

There is a publication devoted to this topic called "Speleonics". At the moment, I don't have access to the address, but will track it down and post it. You can also probably track it down at your university's library.

QST de W1AW
Propagation Forecast Bulletin 25 ARLP025
From Tad Cook, KT7H
Seattle, WA June 23, 1994
To all radio amateurs

SB PROP ARL ARLP025
ARLP025 Propagation de KT7H

Solar activity was down over the past week, but at least the geomagnetic indices were lower, signalling more stable conditions. The A index dropped into the single digits, and there were periods toward the end of the week when the K index was one or zero.

Unfortunately, more upsets are predicted, and the poor conditions could disrupt Field Day weekend. For June 25 and 26 the solar flux is predicted to be around 70, and the K index could go as high as five. Solar flux should rise again to peak near 85 around July 10.

The best all around DX band should be 20 meters for the near term, considering the Summer season and the low solar flux.

Sunspot Numbers from June 16 through 22 were 80, 53, 49, 60, 25, 38 and 20, with a mean of 46.4. 10.7 cm flux was 87.9, 83.9, 78.4, 77.6, 76.4, 74.4 and 72.2, with a mean of 78.7.

There is more than one path projection for this week, and they are domestic forecasts for Field Day weekend.

From Southern California to the New England states 80 meters looks good from 0200 to 1030z, peaking around 0430. 40 meters looks good from 0030 to 1230, peaking from 0400 to 0900. Check 20 meters from 0000 to 0300. 10 and 15 meters do not look promising.

From Texas to Ohio 80 meters looks best from 2330 to 1230z, peaking from 0230 to 0930. 40 meters just might be open around the clock, but will most probably be good from 1830 to 1200, with the best period from 0200 to 1000. 20 meters does not look good, but check from 2100 to 0000 and 0230 to 0500. 15 and 10 meters do not look good.

Finally from Oregon and Washington to Florida, 80 meters looks good
from 0230 to 1100z, peaking from 0430 to 0930. 40 meters looks good
from 0130 to 1230, peaking from 0400 to 1000. 20 meters looks great
from 0230 to 0430, and may open as early as 2000 and close as late as
1000.

ARLB054 2300 MHz news

2300 MHz news

A proposed reallocation of 35 MHz of spectrum in the 2300 MHz band goes against the will of Congress, the ARRL has told the FCC, and existing and future amateur uses of that spectrum must be protected, the League said in comments filed June 15, 1994.

The comments were in response to an FCC Notice of Inquiry (NOI), released May 4, that asks for information from potential applicants for use of the spectrum -- at 2300 to 2310 MHz, 2390 to 2400 MHz, and 2402 to 2417 MHz. Amateurs currently share 2300 to 2310 MHz and 2390 to 2417 MHz with US government users.

The NOI is the result of a plan from the National Telecommunications and Information Administration (NTIA) to transfer 50 MHz to private users immediately, and another 150 MHz later, from spectrum now allocated for federal government use.

The League first commented on the idea of frequency transfers in 1990, when the NTIA began a study of the entire domestic telecommunications ''infrastructure.'' In 1992, the League responded to an NTIA Notice of Inquiry, saying that continued or upgraded access to 2300 MHz was crucial to future amateur uses, both terrestrial and satellite.

The transfer of spectrum from federal government to private sector use is required by the 1993 Omnibus Budget Reconciliation Act; but that Act also requires that the needs of amateurs be taken into account.

The League told the FCC that ''there is no indication of any finding or study, as required by statute'' (the Act) ''that the proposed reallocation of the spectrum that amateurs currently share for

commercial use will be benign with respect to continued amateur occupancy of the band.''

The League said that the FCC, in justifying other reductions in amateur allocations between 220 and 2390 MHz, had implied that other frequencies, including those now proposed to be affected, would continue to be available to amateurs.

Hi,
I have had a passing interest in getting my license for many
years. I have now decided to look into it and get the license, when
I was much younger you had to learn code, it it still a requirement?
Also, I'm interested in getting a rating that would allow me to
talk over a band on a handheld that I could carry into the mountains.

What are your suggestions.

If needed, what's the best and fastest way to learn code?

please reply via email...

The only country with automatic reciprocity is Canada. You'd need a reciprocol license from Bermuda, which takes about 60-90 days to get, and you also have to have at least a General Class US license. So, no, don't bother bringing your HT.

Subject: Re: Tech+ license issued.

JBL> >issued to me with a class of 'TECH PLUS'! I had passed my 5 wpm cw tes
JBL> >in March
JBL> When did this go into effect? I passed my 5 WPM in January. I have
JBL> received nothing from the FCC. The VEC just sent me home with the
JBL> CSCE and said they did not have to send anything in.

JBL>I believe this started in March when the FCC began accepting the new
JBL>(current) form 610 (and ONLY that form). If you were to move, say,
JBL>and submit a photocopy of your CSCE with one of your license and a
JBL>change-of-address 610, I'll bet you'd get a new license that said Tech
JBL>Plus, too.

That's correct! The new FCC 610 went into effect on March 1, 1994. As a VE I received the new version of the 610 in the mail last January or February!

It is also my understanding that a Tech plus can request that his license be reissued with the class TECHNICIAN PLUS noted on the license! This would mean resubmitting a new 610 with copies of his current license and CSE with the code credit noted. The turn around time will be about the same as if it was a new license.

If a person has decided that he is never going to upgrade from Tech Plus, for various reasons, than that may be the way to go. If the amateur, who has a Tech Plus license, would devote only 1/2 hour or so per day listening and practicing code. In 10 weeks, the length of time for the issuance of the amended license, that individual should have no problem upgrading to the General or ?? operating Class!

4560. Diversity in CW Skills.

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-25 05:54:04 UTC
From: R0264@vmcms.csuohio.edu
Message-ID: <16FE0CAC.R0264@vmcms.csuohio.edu>
Source record: 264505

We see some widely divergent pieces of advice on learning Morse code and improving code speed.

I suggest that almost everyone is correct on what "to do", but not on "what not to do". Some say not to copy each letter automatically in a stimulus-response manner, without thinking; some say not to listen for words; some say not to write down dots and dashes.

I believe that a bit of skill in all these areas could be useful under some circumstances.

If you are skilled only in words, you will probably miss unfamiliar dx call signs and QTHs, as well as other things such as abbreviations that you have not learned yet, or someone's geographical coordinates or grid number.

If you don't listen for words, and only copy each letter by the stimulus-response method, you will probably have to sit and study what you have written for a while, before answering, and not be able to carry on a coherent conversation, especially under QSK conditions.

If you refuse to write down dots and dashes, you may miss some Greek, Russian, or other foreign characters, as well as some uncommonly used English punctuation such as colons and semicolons.

If you listen to the W1AW code practice and CW bulletin broadcasts, you will see that it is necessary to switch among various strategies and skills, though W1AW sticks mostly to the English Morse alphabet and to common punctuation marks.

I got pretty good at audio Morse code, but once had occasion to try to copy visual code transmitted by lights, as was done commonly by naval ships in WWII. It was very tough, because I had never practiced it, and I was almost reduced to the dot-dash method.

There has been a similar controversy among some extremist people, theorists concerning how children should be taught to learn to read. Some think that the kids should always read the letters first, and then put them together to form words. Others think that there is no point in learning the alphabet, because most reading is done by whole words. Both camps are right and both are wrong. Reading involves letters under some circumstances, and words under others. Less extreme people disagree about where to start -- letters or words. I have an opinion, and carried back to CW, I'd say start with letters. ---------- Phil Emerson, AA8JO.

4561. Possible Compromises on Feedline Length

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-25 06:20:27 UTC
From: R0264@vmcms.csuohio.edu
Message-ID: <16FE012DB.R0264@vmcms.csuohio.edu>
Source record: 264506

I'm thinking of writing a little computer program to compute the best length of an antenna feedline, within limits of a user-specified max and min, such that it comes as near as possible to being an integer multiple of a half wavelength for several different frequencies, specified by the user, such as the middles of several HF bands.

Why? -------- (1) For a single frequency, if you feed with a multiple of a half wavelength, what your instruments at the transmitter tell you is pretty much true at the antenna end. (2) If your feedline is a different length, you can still infer a lot about the conditions at the antenna end from instruments at the transmitter end, if you know a lot about the feedline, using the "Transmission-Line-Equations". (3) But those calculations are subject to rather serious errors, if the feedline is not near a multiple of half a wavelength (ARRL Antenna Book, pp 27-23 to 27-30). (4) Now, with the WARC bands, and even without, it is impossible to cut a feedline of practical length that is an integer multiple of half a wavelength for the centers of all HF bands.

The program to find an optimal compromise of the length of a feedline for more than just a few frequencies would not be trivial to design, but does anyone else think it would be useful? -------- Phil Emerson.

>to admit they might have been somewhat mislead by the advertising
>claim ?

It seems there are at least two popular antennas in amateur radio whose main claim to fame is that they've made a lot of money for their manufacturers. Those are the through_the_glass type and the small magnetic loop type. As your wife demonstrated, a near dummy load will work as an antenna after a fashion. It's only when you can do side by side comparisons against classic groundplane and dipole elements that you discover how poorly some of these antennas actually perform. (The same could be said for some of the popular mobile HF antennas being hawked to amateurs.)

4564. Cage Dipole Rings

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-25 13:51:55 UTC
From: david.siglin@ccibbs.com
Message-ID: <9406260349298359@ccibbs.com>
Source record: 264591

The Cage Dipole is an outstanding antenna system that has been in use in the US Navy for many years. It more recently found its way into use with the M.A.R.S system.
Description: The Cage Dipole gets it's name from it's appearance, the dipole consistes of several spreader rings which support 6 to 8 wires in a circular arrangement, most antennas in the 80 to 40 meter band will require 8 to 10 rings. Once assembled it resembles a cage.
Advantages: The Cage Dipole once assembled (on 12 inch rings for example) acts as though it has a single conductor that is 12 inches in diameter. The result is a exceptionally broadbanded design! My 12 inch system operates across the entire 80 meter band without the need to retune. The large capture area of the antenna makes for an unsurpassed receive antenna as well.
Finding the rings is the tough part. If you are interested in this type antenna or want help locating the spreader rings leave e-mail here or on prodigy (UWKJ62A) or give me a call at (901) 476-7171.

For what it's worth, here is the chronology of my wife's license:

Passed exam: March 12, 1994
VEC gave paperwork to FCC: March 28
FCC issued license: June 14
FCC postmarked license: June 17
License received: June 21

To save you looking at your calendars, the FCC had it in their hands
for twelve weeks from receipt to postmark. Time from examination to
license receipt: fourteen weeks and three days.

Your milage may--and probably will--vary.

Hi Rob, I'm sorry but you are mistaken. TechnoLogic Concepts has a kit
that allows an ICOM-22S to tune 144.62 to 148 MHz in 5KHz steps without
changing the crystal. It is an extremely simple mod that allows the
extra frequency coverage: Remove D6, D7, and R38 from the PLL board
and solder a jumper from pin 13 to pin 16 on IC-1. This will allow
simplex only operation from 144.62 to 148 MHz with standard 15KHz spacing.
The TechnoLogic Concepts kit then allows repeater offset operation and
5 KHz spacing. Their address is:

TechnoLogic Concepts, 1803 Mission St., Suite 308, Santa Cruz, CA 95060

Oops, make that simplex only operation from 144.62 to 146 MHz...sorry.

: What contesting software is available which supports the IARU contest
: in July? I need something fast. Thanks. de Rick (VE9HF).

I've been using CT (version 8.something) in IARU HF the past few years.
There were some bugs in the scoring early on, but I know later releases
took care of that.

4576. IPS Daily Report - 25 June 94

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-25 23:14:19 UTC
From: rwc@flare.syd.ips.oz.au
Message-ID: <1994Jun25.231419.6362@ips.oz.au>
Source record: 264584
Cross-posted to: aus.radio,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 25/2330Z JUNE 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 25 JUNE AND FORECAST UP TO 28 JUNE

IPS Disturbance Warning 17 was issued on 22 June and is current for
interval 24 June to 4 July

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 073/009

GOES satellite data for 24 June
Daily Proton Fluence >1 MeV: 7.9E+05
Daily Proton Fluence >10 MeV: 1.4E+04
Daily Electron Fluence >2 MeV: 2.7E+08
X-ray background: A1.8
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
26 June 27 June 28 June
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 075/013

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 24 June
Learmonth 04 2111 1121
Fredericksburg 03 04
Planetary 05 05

Observed Kp for 24 June: 1211 1222

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
26 Jun 16 Unsettled to active.

27 Jun 16 Unsettled to active.
28 Jun 16 Unsettled to active.

2C. MAGNETIC COMMENT
Expected increase to active levels did not occur. Active periods now
seem less likely.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
25 Jun normal fair fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
26 Jun normal fair poor
27 Jun normal fair poor
28 Jun normal fair poor
3C. GLOBAL HF PROPAGATION COMMENT
Degraded HF comms did not eventuate on July 25. Mild degradations
possible until July 4.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were about 15% below predicted monthly values

Observed T index for 25 June: 15

Predicted Monthly T Index for June is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
26 Jun 15 10 to 15% below predicted monthly values.
27 Jun 20 Near predicted monthly values.
28 Jun 20 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Mild depression observed yesterday, however no associated geomagnetic
activity. Spread F observed during local night. Degraded HF comms
expected at times during interval June 26 - July 4.

```
Title : TWIAR065.ASC |
---------------------------
```

Here is a summary of news items covered on Edition #65 of "This Week in Amateur Radio", North America's satellite-delivered audio bulletin service, for the week ending 1-Jul:

1. FCC Adopts NPRM on Automatic Digital HF Forwarding
2. New DOVE-OSCAR-17 Satellite Voice is Louder, Message Changed
3. Peter I Island DXpedition Member Pleads Guilty to Fraud and Mail Theft
4. SpaceNews Reports Packet/Internet Delays Due to New Packet Rules
5. AMSAT Announces Board Nominations Received for Upcoming Election
6. ARRL Suspends W1AW CW Practice Sessions for Field Day Weekend
7. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
8. Weekly Propagation Forecast with George Bowen, N2LQS
9. "Amateur Radio Newsline" - Edition #880 from Los Angeles
10. "The RAIN Dial-up" from Chicago
11. "EZSATS" with Dave Mullenix, N9LTD

Funding for the program's transmission, uplink, and production expenses was provided this week by a grant from the Viking Amateur Radio Society of Waseca, Minnesota, where "This Week in Amateur Radio" is heard on the WA0MJF repeater on 146.94 MHz, serving Waseca, Mankato, south central Minnesota, and north central Iowa. Funding for "RAIN" was provided by Larry Shilkoff, KJ6NV, of Van Nuys, California.

4579. This Week In Amateur Radio Affiliate List (As Of June '94)

> Description: The Cage Dipole gets it's name from it's appearance,
>the dipole consistes of several spreader rings which support 6 to 8
>wires in a circular arrangement, most antennas in the 80 to 40 meter
>band will require 8 to 10 rings. Once assembled it resembles a cage.

Interesting. I've seen this antenna in old photographs of
ham and commercial stations; the older QST covers ocassionally
showed one, too. Must be a bit on the heavy side.

I received a lot of replies on my previous post mentioning
the Trans-Atlantic multihop Es 50 MHz opening to the States sunday,
june 19th. For those who are interested here are the stations worked
by me during that 30 min opening. If you know any of these stations
spread the word :-)

W2CNS, WB4DBB, W1DU, WA1AYS, KA1YQ, KM1E, K8MFO, WA3TBG, K1JRW, K1ZKR,
K8GQB, K1DPP, N1RWM, N1KKY, N1HOV, WA8DXB, K1FWF, KA1A, W8CMS, VE3ECL,
N8TLZ, N2DSY, N8KOL, WZ1V, W4PSJ/8, KD4CAN, W1AIM, K3VLQ, W5EU, K2MUB,
W1AJR, NW3C, VE3TFU, WW4J (?), K1HTV. These stations were worked
between 19.49 and 20.19 UTC. After this opening another small one
reoccured and I worked N1DJB, K1TOL and WA1AYS (from 21.47 to 22.03 UTC)

See you on six,

Remco, PA3FYM

4584. 50 mc opening on june 25th statesside

Good news again!!!

Last saturday, june 25th we had another Es opening to the States
into Holland. Apart from the 'standard' southern europeans the opening
ran into Scandinavia as well. Signals were not so loud, approx. in the
55 range. One of the highlights was WB4NFS/P/VP9 (!!!!!) which was
DXCC #108 for me. During this weekend apperantly a fieldday-contest
was held. Despite to that fact activity was low. The opening was
mainly to the 4-district. To our (i.e. the 50 MHz DX incrowd in the
Netherlands) surprise the opening lasted the whole evening and started
at approx. 1700 UTC. The station which was the most in the picture
was KJ4E (EL98) whos signal sometimes peaked to S9. Although I worked
several stations from the 4-district during previous F2 openings I
managed to work some new grids. Stations worked by me:
N4EJV (EL97), KJ4E (EL98), N4EJW (EL97), K2OU/4 (EL87), NT4B (EL89),
W4WHK (EM90), K4SC (EL98), WA4CHA (EL88), WB4NFS/P/VP9 (FM72), K4FA (EL96).

At approx. 2130 UTC the opening ran into the 1 and 2-district but signals
were significantly weaker (53-range). I worked: W1WHL (FN31), W3IWU (FN20),
WZ1V (FN31), K2SMN (FN20) and W3EP (FN31).

Stations heard by me (despite I called them): KC4SUS (EL95, could have
been a new grid for me), W5HUQ/4, W4OO (EL96), NU4Q, W1AW.

Fortunately most of the stations realized that there was an opening
towards Europe going on. Unfortunately some stations hadn't the
faintest idea like WC2G. I believe his score should have been signi-
ficantly improved if they were able to hear the huge european pile-up
for them. Instead of making QSOs we could clearly hear the BBQ
and the loads and loads of beer being poured into the operators mouth :-)

After approx. 2200 UTC signals disappeared.

Remco PA3FYM (JO22){_

Harry, WA3TBL sez:

>> Are you planning any ATV or SSTV operations? Just curious. :-)

>> Maybe we need a new Q-signal...QND...operating nude! :-) :-)

Actually, (and you probably already know this), QND and most of the other QN's are already in use. QND is frequently used on Amateur Radio traffic networks to indicate the fact that the net is now directed.

How about "QIB", which would presumably mean "operating in the buff" ??

Too bad QRS is already in such wide use. It could dual as "Ready for Sunburns" !!

4588. GB2RS News 26th June 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-26 18:10:11 UTC
From: dave@llondel.demon.co.uk
Message-ID: <772679411snx@llondel.demon.co.uk>
Source record: 264601
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 26th of June and here is the GB2RS news broadcast, prepared by the Radio Society of Great Britain.

First the headlines:-

The first 10GHz moonbounce contact between two British stations has taken place,

July RadCom has been posted,

Sporadic E has dominated the higher bands this week - and there's more to come, and

RSGB Past President Len Newnham, G6NZ has died.

The first 10GHz moonbounce contact between two 'G' stations took place at 2340 last Sunday the 19th of June, when G4RFR in Wimborne, Dorset worked G3WDG in Rushden, Northants. Good reports were exchanged and both stations were able to hear their own echoes. G4RFR is the club station of the Flight Refuelling Amateur Radio Society. The moonbounce system was built by members as a club project, and was operated by G0API, G3YGF, G6NLC, G4JNT and G0DQQ. It comprised a 12 foot dish, a 15 watt transmitter and a 2dB noise figure system. G3WDG's station was operated by Charlie, G3WDG and Petra, G4KGC, and comprised a 3 metre dish, a 40 watt transmitter and a 1.2dB noise figure system. The G4RFR EME station will be on display at the Flight Refuelling Hamfest on Sunday the 14th of August.

The July edition of Radio Communication has been posted to all RSGB members. This month's RadCom includes a full list of QSL Bureau sub-managers.

The Radio Society of Great Britain was represented at the funeral of Len Newnham, G6NZ, which took place last Friday. Len, who died on Saturday the 18th, aged 89, was President of the RSGB in 1958. He was renowned for his collection of historic radio equipment, much of which was exhibited to the public from time to time on HMS Warrior. Further details of Len's contribution to amateur radio will appear in the August edition of Radio Communication.

Morse Tests will be available on demand during the Hamfest-UK rally next weekend. Tests are available from 10.20am to 4pm daily. Candidates are reminded that they need to provide two passport-type photographs, together with the necessary fee, paid by either a cheque or postal orders but not cash. We have full details of Hamfest-UK later in this bulletin.

The Wells, Somerset, two metre repeater GB3WR on R0, was closed down last Monday the 20th for repair work. Further details from the repeater keeper G0MBX, whose address is correct in the RSGB Call Book.

The Buxton Two metre repeater GB3HH on R4, was taken off-air after a period of intermittent receiver operation. The keeper regrets any inconvenience until the problem is resolved and the repeater is reactivated. For further details regarding the repeater contact the keeper, G3RKL, whose address is correct in the RSGB Call Book.

Now attention all amateurs living in the East Highland area of Scotland. The RSGB is looking for more Novice Instructors to cover the Inverness, Wick and Thurso areas. Anyone interested is requested to ask for the booklet 'Novice Licence Training Scheme', which contains the necessary details and an application form. Contact the Amateur Radio Department at RSGB Headquarters for your copy.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Jordon, G3SED and G4CCZ are active as JY8ED and JY8ZC respective from now, until Tuesday the 28th of June. Activity will be on all bands 6 - 160 metres but with special attention to the WARC and LF bands.

From Liechtenstein, G4BWP and G4XRV will sign HB0/own-call during tomorrow, Monday the 27th of June from 1000 UTC until 1800, using mainly CW.

From South Africa, DL4JZ will sign ZS6IR from Friday the 1st of July for three weeks. Activity will be on 40 and 80 metres only, check 7.042 to 7.055MHz and 3.78 to 3.8MHz from 2000 to 0600 UTC daily.

Now the rallies for today, Sunday the 26th of June:

The Wrexham Amateur Radio Society Mobile Rally is being held at the Clwyd Veteran and Vintage Machinery Society's Annual Steam Rally at Plessey, Eyton, near Wrexham. The event features a radio and electronic related "car boot" flea market.

The Longleat Amateur Radio Rally is being held at Longleat Park, near Warminster, Wiltshire. Follow the brown tourist signs for Longleat House, not the Safari Park, from the A36 road. Doors open at 9.30am. The disabled car park is located near to the rally. The event features over 150 trade stands covering communications, computers and associated peripherals. There's also an RSGB stand and a bring and buy for private sales. Other attraction include a craft fair, Royal Signals special event station, historic wireless equipment and refreshments.

The Norfolk Raynet Barford Rally is being held at the Village Hall and Playing Fields, Barford, on the B1108 road, approximately seven miles west of Norwich. Doors open at 10am. The event features trade stands, car boot pitches and refreshments.

Next the events we know of for next weekend:

The Hamfest-UK rally is to be held next Saturday and Sunday, the 2nd and 3rd of July at the County Showground, Weston Road, Stafford. This is on the A516, not far from the M6, junction 14. The show ground is signposted.. Doors open at 10am on both days, with priority admission for the disabled. This is a new event for radio amateurs, short wave listeners and computer enthusiasts. The event features a large trade presence, special interest groups, lectures and a bring and buy stall. RSGB Morse Tests will be available on demand. Talk-in by GB2HAM will be on 2m metres, channel S22, and by GB4HAM on 70 centimetres, SU22. For further details see July's RadCom, page 50 or telephone 0923 893929.

There are two events for Sunday the 3rd:

The York Radio Rally is to be held at the Tattersall Building, York Racecourse, Knavesmire, York. Doors open at 10.30am. The event features trade stands covering amateur radio, electronics and computers. Other facilities include an arts and craft fair and refreshments. Talk-in will be on channel S22. For further details contact Dave, G7FGA on 0904 790079.

Also the Newport Amateur Radio Society Junk Sale is to be held at the Brynglas Community Centre, Brynglas Road, Newport, Gwent. Doors open at 10am. The event features a junk sale, a bring and buy stand, a car boot sale and refreshments will be available. Talk-in will be on channel S22. For further information telephone 0633 25001, working hours only.

A date for your diary:

The RSGB's Woburn Rally will take place on Sunday the 7th of August at Woburn Park, Bedfordshire. Full details and a map of the surrounding area can be found in July Radcom page 33. For further information contact Norman Miller, G3MVV, on 0277 225563.

Now for the HF contest news:

The Canada Day Contest takes place next Friday the 1st of July, from 0000 until 2359 UTC. For further details see June's RadCom, page 19.

The Russian DX Contest which was originally scheduled to take place during this weekend has now been postponed until Friday the 29th and Saturday the 30th of July.

Next some VHF contest news:

The third RSGB 10GHz Summer Cumulative Contest takes place from 0900 to 2100 UTC, today Sunday the 26th of June. See April RadCom page 82 for details.

There are two Worked All Britain (WAB) Contests today, Sunday the 26th, first one is the 144MHz QRP Contest from 0900 to 1300 UTC, followed the 432MHz Contest from 1400 to 1800 UTC. Send logs to G4SKQ whose address is correct in the RSGB Call Book.

The RSGB's Premier VHF contest, VHF National Field Day, takes place next weekend from 1400 UTC on Saturday the 2nd, until 1400 on Sunday the 3rd

of July. See April's RadCom page 82 for full details.

The third RSGB Backpackers 144MHz portable contest takes place from 1100 to 1500 UTC next Sunday the 3rd of July. This is an SSB and CW event and finishes one hour after VHF NFD. Full details can be found in the January and April editions of RadCom.

Special event stations this week include:

GB2RAF which will be aired until Monday by members of the RAF Sealand Amateur Club to celebrate the RAF Sealand's 70th anniversary. Today, Sunday the 26th, is RAF Sealand Open Day with side shows, trade stands and a flying display. The Club features a demonstration of amateur radio assisted by Clwyd Raynet. Talk-in will be on 2 metres, channel S22.

GB2WI will use 80, 40 and 2 metres on the 2nd of July, at the Women's Institute County Day at Kirkley Hall, Ponteland, Northumberland.

The Bridlington and District Amateur Radio Society will use GB2SJC next Saturday and Sunday, the 2nd and 3rd of July, on the occasion of the final stages in building St. Johns Church Hall, Sewerby. Operation will be daily on the 80, 40, 20 metre bands on SSB and possible 2 metres on SSB and FM. For further information contact John, G4DUP on 0262 603358.

GB75FC, will be aired by the Scarborough Special Events Group to celebrate the 75th Anniversary of the Forestry Commission, during next Saturday and Sunday the 2nd and 3rd of July. The station will operate from the Festival Site in Dalby Forest, North Yorkshire on 80, 40, 2 metres and 70 centimetres. A full-colour QSL card will be issued to commemorate the occasion and listener reports will be most welcome. For further information contact Roy, G4SSH, whose address is correct in the RSGB Call Book.

And now the solar factual data:

In these reports, the terms 'indices' and 'index' mean that the measurement has been made in accordance with internationally agreed standards. The 'mean' is the centre value between the highest and lowest level, and the 'average' is the addition of all the values divided by their number.

The period from the 13th to the 19th of June saw the HF bands still affected by coronal hole magnetic activity and a decline in solar flux levels. However, this was offset by widespread sporadic E extending from Spain to the Ukraine, lasting up to 21.00 hours on some days, affecting particularly 10 and 6 metres.

No flares have been reported, and the sunspot indices have generally declined; the period gave a mean of 58. The solar flux levels have also declined from 88 units on the 15th down to only 77 units by the 19th, giving an average for the period of 83 units. Solar flux levels have steadily declined from around the 120s last January down to the 80s now. This is a very steep fall and is partly responsible for the poorer than

expected HF band conditions. The solar flux 90 day average on the 19th was 80 units.

The geomagnetic Ap indices tended to rise slightly over the period and averaged 12.5 units, but overall this is quieter than of late. The 16th was very quiet at only 4 units, but was back up to 20 units again by the 19th. Northern stations have been most affected by the higher levels. The state has been 'nil, nothing to report' throughout the period.

The aa indices, as supplied by the British Geological Survey for the 7th to the 13th of June, gave an average daily index of 28 nanoTeslas - about K3; the disturbed periods were around 59 nanoTeslas and the quiet ones down to 8. The X-Ray flux levels have continued to increase and averaged A9.1 units for the period, but reached B1.0 on the 15th and 16th - the highest levels since last March.

I'll repeat the figures. Spots - 58; Flux - 83; Ap index - 12.5; X-ray flux - A9.1.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon, averaged 7.3MHz, hardly varying day to day. The darkness hour lows averaged 3.6MHz, but blanketing E was reported every day lasting up to 6 hours on some days. The highs are now centred about 20.00 hours and the lows 04.00 hours.

I'll repeat the figures. Highs - 7.3MHz; lows - 3.6MHz.

Now the ionospheric data for the north:

The F2 daytime critical frequencies at Ekaterinberg averaged 6.2MHz and the darkness hour lows 4.2MHz.

I'll repeat the figures: Highs - 6.2MHz; lows - 4.2MHz.

And lastly the solar forecast:

This week the quiet side of the sun will be looking our way and solar flux levels are expected to be at about the 70s. Geomagnetic levels are expected to be disturbed at first, possibly up to substorm levels, then quietening by the end of the week to 'just unsettled'. F-layer MUFs in the south are expected to reach about 21MHz during daylight, and 14MHz during the darkness hours. North/south paths will be the best. Daylight sporadic-E is expected to be widespread particularly on 10 and 6 metres.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns issued were in the G0 Uniform Yankee and G7 Sierra Kilo series, and Novice calls in the 2 0 Alpha India and 2 1 Delta Delta series.

--

GB2RS is prepared by the Radio Society of Great Britain and is broadcast
in the 80m, 40m, 6m and 2m bands.

I saw lots of these when I was in the Soviet Union in 1989. Also, what looked like multisection units. Reminded me of link sausages.

Does everyone else go around on vacations scanning rooftops, etc., for antennas when on vacation?

I would be interested in the spreader rings and any tips for keeping
them in place. This gives me some ideas too. I am going to be
putting up a full wave square loop for 160m. What if all four legs
were constructed in the same manner? Has anyone played with this?

73, Gary

That's funny. Besides seeing a cage dipole at a ship-to-shore station, I have only seen these dipoles at Ruskie embassies in Europe. All seemed to be cut for somewhere around 80M.

SB DX @ ALLBBS $OPDX.164
Ohio/Penn DX Bulletin No. 164

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 164
BID: $OPDX.164
June 27, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DF4RD, DL7VEE & DXNL, K4CEF & Southeastern Cluster Group, N4ZR, WA4IUM, W5KNE & QRZ DX, W6RCL, IK4MGP, RW3AH and 9V1YC for the following DX information.

3W, VIETNAM. Paul, AA2AV, and Mike, K1MR, are supposed to be currently active from here until July 2nd, but there has not been any QSNs reported. Paul, who is there for some research on Agent Orange, has requested the callsign 3W3AV. They plan to be active mainly on 20 and 40 meters CW (possible activity between 1130-1230z and 2200-2400z).

4U1WB QSL ROUTE. Pete, N4ZR, wanted OPDX to mention that he is not the manager for 4U1WB, other than for CQ WPX activity in May 1992 (the CW portion). Manager for other operations continues to be KK4HD.

5H, TANZANIA. Andy, RW3AH, (Russian ARES Chief Co-ordinator) informs OPDX that R3ARES/5H, the club station of HQ Russian ARES, has moved with the Russian rescue team to Tanzania from their recent operation in former Yugoslavia (R3ARES/YU). The rescue team from the Russian Ministry of emergency situations is providing humanitarian UN aid for Rwanda refugees in Tanzania. This station is only active daily during the R_ARES Net on 14292 kHz at 0700z (sometimes at 1700z). QSL via RW3AH.

9N, NEPAL. Presently there are only three operators in 9N-land (9N1AA, 9N1HA AND 9N1RB). It is reported that only 9N1AA and 9N1HA have their own station. 9N1AA's name is Satish, and he has worked SSB and RTTY in the past, but has recently discovered the mode PACTOR. He has found it to be an excellent mode for communication, but Satish is having a problem working stateside stations and is looking for anybody that could help him solve the problem. If you can help, leave a message in JA5TX's Mailbox, Satish checks it daily.

9V, SINGAPORE. The station 9V1ARU of the Singapore Amateur Radio Transmitting Society will be active in the upcoming IARU contest under

the "HQ" category as an official IARU region 3 member organization. Operators will be 9V1YC, 9V1ZB and JE1JKL, plus additional society members (callsigns not confirmed yet). The station is restricted by law to only operate at 100W, so they hope stations will be looking for them. This is the very first legal Singapore multi-op station in an international contest. They are trying to encourage contesting amongst the less active Singapore ham, in hopes that more local operators will try the bigger contests. 9V1ARU will also be used to promote the upcoming IARU region 3 conference to be held in Singapore this September.

BS, SCARBOROUGH REEF (HUANGYAN DAO), SOUTH CHINA SEA. After being delayed for one day (due to the weather) the BS7H DXpedition hit the air waves on June 25th. Several JA sourceshave stated the DXpedition was only active from 0900 to 2300z and then went QRT. They made around 2000 QSOs in which none of the contacts were made on CW because they did not bring a keyer. Last week New England Division Rep to the DXAC, Bill Shipp, KC1AG, reported that DK9KX has withdrawn his petition for new country status for Scarborough Reef. No reason was given, but information from KJ4VH indicates that he (also Martti and others) are aware of this withdrawal and they would proceed anyway with the first Scarborough Reef DXpedition.

CN, MOROCCO. Valentini, IK4JQO, will be signing CN2VA from August 6-22th. He will operate only SSB on 10-80 meters (especially 12-17 meters). He will also be active from Mogador Island (AF-065). QSL via IK4JQO.

FR/G, GLORIOSO ISLAND. "QRZ DX" mentioned that FR5ZQ will be active during the months of July and August. This country is rated 17th on the OPDX Most Wanted List for 1993.

HH, HAITI. For a short period of time (length was not given)there will be some activity from N4MU/HH2 and W6RCL/HH2. They are both employed by U.S. television news agencies and temporarily assigned to Port-Au-Prince, Haiti. N4MU is running 100 W to a TS-50 and has concentrated on 15-40 meters, while W6RCL is running 100 W to an IC-725 and has a longwire which loads from 160-10 meters. Both are SSB only operations, neither of them brought a key or keyer. W6CRL was last heard on 14190 kHz around 0300z.

JOURNEY TO PETER I ISLAND: "CLOSE TO THE EDGE". This is a 30 minute documentary on this dangerous and exciting DXpedition through the Falkland Islands, the Drake Passage and onto Peter I Island. The video shows enormous icebergs, animal and marine life, massive Antarctic storms and how the DXpedition team was able to make almost 60,000 QSOs. The documentary was produced professionally from 12 hours of videotape shot by Terry Dubson, W6MHB. Those that are interested in this documentary can contact: Jerry Branson, AA6BB, 93787 Dorsey Lane, Junction City, OR 97448. There is a $25 donation (which includes shipping).

ZS, SOUTH AFRICA. ZS6IR plans to be active on SSB daily from 2000 to 0600z between 3780 and 3800 kHz and between 7045 and 7055 kHz. QSL via DL4JZ (Note: The address of ZS6IR in the callbook is wrong).

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

I am new to the internet. I have been downloading propagation conditions & forecasts by landline from NOAA/ERL SEL BBS in Boulder, & it occurs to me that I can save on phone bill by finding the information on the internet.
Needless to say the wealth of info here is numbing, I need a little help! Has anyone located a reliable current source for propagation conditions & forecasts?

claim ?

Not in the least. I've had both Butternut and AP-8 verticals at this
location (ground mounted), and neither came anywhere close to the
performance of the Isoloop.

You bet, Doug! Even here at home whenever I go out I try to find new routes just to look for antennas.

When I'm on your side of the Pacific I scan tops of buildings, roofs, mountain tops...

Can someone in L.A. tell me what I see when I look from the Studio City area up to the Hollywood Hills - there appears to be a two story home that has about 50 antennas, some broadcast, some are dishes, most are verticals on several towers. This would be near where Coldwater Canyon Drive crosses Mulholland Drive; there is a private tennis club just below it (I know because I rode a motorcycle up to there - couldn't reach the site due to a private gate). This is NOT the same site that sits above the HOLLYWOOD sign. This site is in a residential area and is actually a house whose interior must be nothing but transmitters.

4597. What causes pitch shift in receiver?

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-26 22:53:22 UTC
From: mike@io.org
Message-ID: <2ul0t2$50o@ionews.io.org>
Source record: 264607

I was (trying) to listen to the 80 and 40 meter bands on an inexpensive portable (a Pulser).

What causes the 'pitch shift' effect? ... I.e the person's voice sounds like it's been shifted down an octave or more, and also sounds like it's being fed through a flanger.

Is it just that the receiver cannot isolate a particular frequency well enough?

This happens even with fairly strong signals (they are coming in pretty loud anyway).

Btw, I *don't* get this effect with the commercial sw broadcast stations like the bbc.

I did pick up a weak signal that I could barely make out the voice from all the static,however I could *clearly* hear the person's voice and exactly what he was saying, i.e. no pitch shift.

Mike

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 26/2330Z JUNE 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 26 JUNE AND FORECAST UP TO 29 JUNE

IPS Disturbance Warning 17 was issued on 22 June and is current for
interval 24 June to 4 July

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 074/011

GOES satellite data for 25 June
Daily Proton Fluence >1 MeV: 1.4E+06
Daily Proton Fluence >10 MeV: 1.5E+04
Daily Electron Fluence >2 MeV: 2.1E+08
X-ray background: A2.9
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
27 June 28 June 29 June
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 075/013

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 25 June
Learmonth 21 3444 3343
Fredericksburg 20 02
Planetary 20 04

Observed Kp for 25 June: 0101 2113

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
27 Jun 20 Unsettled to active.

28 Jun 16 Unsettled to active.
29 Jun 16 Unsettled to active.

2C. MAGNETIC COMMENT
Coronal hole sourced disturbance has eventuated and is in progress. Active conditions expected.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
26 Jun normal fair fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
27 Jun normal fair poor
28 Jun normal fair poor
29 Jun normal fair poor
3C. GLOBAL HF PROPAGATION COMMENT
Degraded HF comms expected at mid and high lats for next 3 days.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T index for 26 June: 36

Predicted Monthly T Index for June is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
27 Jun 25 Near predicted monthly values.
28 Jun 25 Near predicted monthly values.
29 Jun 25 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Spread F observed during local night. Geomagnetic activity in progress. Degraded HF comms expected at times during interval June 27 - July 4.

No; it sounds like you're trying to receive single sideband signals using
a receiver that cannot demodulate them. You will need a BFO or product
detector to receive them properly ... i.e. a better radio.

[880]

Newsline report number 880 for release on Friday, June 24 1994
to follow.

The following is a QST

Postal authorities could be called to investigate the alleged California ham radio testing scam. Accusations are surfacing that some hams may have bought their licenses by mail! This story and more on Newsline report number 880 coming your way right now!

(*****
FRAUD SUSPECTED IN CAL VE TESTING SCAM

Charges of mail fraud could be levied against one or more of the Volunteer Examiners and several license applicants currently under government scrutiny in the ongoing California ham radio testing fraud probe. Newsline has learned that the FCC has interviewed a number of individuals in other parts of the country whose examination paperwork seems to indicate that they came to California to be tested by several of the suspect VE teams. According to usually reliable sources, at least one applicant clams to have driven over 2000 miles round trip in one weekend, just to be tested in Los Angeles. Another was found to be a resident of a South Eastern state.
Word is that the FCC does not believe that the examination sessions in question ever took place. That they were created on paper and are therefore fraudulent. And under the vigilant eye of Personal Radio Branch Chief John B. Johnston, W3BE, the commission is hard at work building evidence to make the charges stick.
The June 19th edition of the Westlink Report ham radio newsletter contains what it claims are quotes from the letters sent by Johnston to those suspected of complicity. It alleges that numerous testing sessions the VE's claimed to have sponsored never actually took place. That in some sessions that were held the applicants had access to the answer key for the test being given to them and most important. Most important, the FCC says that it had its own investigator listening in on the telephone when an informant cut a deal with one of the suspect Volunteer Examiners. A cash deal to purchase a ham license without the informant having to take a test.
If Johnston can prove that people purchased government licenses without having attended a test session, and if the United States Postal Service was used to convey payment, then the Postal Inspector can be brought into the case. Under his purview, charges of mail fraud can be brought against those who sold the bogus licenses and those who bought them.
The bottom line is that mail fraud is a criminal offense that carries heavy fines and mandatory jail time. The governments hard nosed approach to dealing with those it suspects of wrong doing in the California VE investigation seems to indicate that the government is prepared to take these cases all the way.

(*****
ARRL REPLIES TO VANITY CALL SIGN PLAN

The ARRL has filed reply comments in the FCC's proposal to institute a vanity call sign program as outlined in PR Docket 93-305. The League says that the vast majority of the 109 comments filed on the proposal favored it, with the major concerns being how to fairly administer it.
In its reply comments the league said that the issue of cost already had been settled, in that amateurs themselves would pay for the privilege of selecting a call sign. Regarding Silent Key call signs, the League said that by giving family members and clubs the first opportunity to apply for such call signs, well known and respected amateurs' call signs could be preserved.

(*****
ARRL TO W5YI: NO

The League says that a proposal by newsletter publisher and national VEC Fred Maia, W5YI of Dallas Texas to establish a "Vanity Call Sign Administration" program in the private sector, was not only not permitted within FCC's mandate from Congress, but would be cumbersome and bureaucratic, while adding no value for the applicant. Instead, the League urged the Commission to proceed with a Report and Order on the "vanity" call sign proposal, incorporating the minor modifications suggested in the earlier ARRL comments.

(*****
POWER REQUEST DENIED

The FCC has affirmed the Chief, Private Radio Bureau's denial of a request by Dale Gagnon, KW1I for a waiver of the Commission's rules governing transmitter power standards in the Amateur Service. Gagnon requested permission for his amateur station to transmit at power levels greater than the 1,500 watts authorized by the Commission's rules.
Gagnon requested the need for higher power in order to engage in long-distance communications. Gagnon also sought to avoid the cost of bringing his vintage transmitters into compliance.
Affirming the Bureau's decision, the Commission said that Gagnon had not submitted any compelling arguments why his station should be given preferential treatment over other amateur stations operated by licensees of the same license class. The Commission said also that there is no basis for permitting Gagnon's station to use greater power than other amateur stations, and to do otherwise, would be unfair to other amateur station licensees who must comply with the power requirement.

(*****
THE LONG WAIT RETURNS

The Amateur license application backlog is on the rise again at the FCC. The latest figures released are based on numbers that are three months old but do show a definite trend. As of Feb 1 st, there were applications 8543 were pending while on Feb 28 there were 12,868 awaiting action. This information is according to ARRL VEC Manager Bart Jahnke, KB9NM, who also says turnaround time in Gettysburg is hovering around the FCC's self imposed maximum of 90 days.

(*****
NEWSLINE

Heres a quick update on the financial crunch facing Newsline. Dr. Norm Chalfin, K6PGX, who administers the Newsline Support Fund reports that he has received enough in the way of sponsorship so that Newsline can continue at least through the end of August, but after that the service will once again be in crisis mode. That is, looking for enough money to avoid having its telephones and electronic mail services turned off. But the good news is that Newsline will not have to go bi-weekly over the summer since enough support has come in to see the service through though the next sixty days.
For information on how to help keep Newsline on the air, please talk off the air to the person running this bulletin on your repeater or net. Or you can write with a self addressed stamped envelope to Newsline in care of Dr. Norm Chalfin, K6PGX, Post Office Box 463, Pasadena, California 91102.

(*****
SERA TO MEET

A new ham television bandplan for the south eastern region of the United States could be on its way. This, with word in the Repeater Journal that the SouthEastern Repeater Association Board of Directors will hold their annual Summer Board meeting July 23-24 in Knoxville, Tennessee.
Directors and Vice Directors from each of the eight member SERA states will take up a number of band planning questions including addressing the bandplan for ATV operations in the region. Hams active and knowledgeable in the ham television mode have been invited to attend and participate in establishing a viable bandplan for the mode. Another item on the agenda will be the possible expansion of the SERA 440 MHz bandplan.
The SouthEastern Repeater Association is the nations second largest "regional umbrella" coordination body overseeing Amateur Radio relay communications bandplanning through member affiliates in Kentucky, Mississippi, North Carolina, South Carolina, Virginia, Tennessee, West Virginia and Georgia.

(*****
ATLANTIC DIVISION AWARDS

The ARRL Atlantic Division "Amateur of the Year" for 1994 is Bob Bennett, W3WCQ, of Towson, Maryland. Among his many contributions to Amateur Radio, Bennett, 58, co-anchors the "Answer Man Net" on the Baltimore Amateur TV Society repeater. After serving for nearly 10 years as the Atlantic Division representative to the ARRL UHF/VHF Advisory Committee, in 1993 Bennett was named chairman of the new ARRL Spectrum Committee. The Division's Technical Achievement award was won jointly by Bill Ferguson, WA3BXW, of Bristol, Pennsylvania, and Charles "Jim" Smith, K3ATI, of Newportville, Pennsylvania.
And the "Grand Ole Ham" is 94-year-old Dean Wallace, K2ANM, of Herkimer, New York. Dean was first licensed in 1919, as 8AAF. The awards were announced at the ARRL Atlantic Division Convention, held in conjunction with the Rochester (New York) Hamfest, on May 21, 1994.

(*****
HOLLY TO SPEAK

Rain Dial-Up producer Hap Holly, KC9RP, will make a rare personal appearance on July 7th at the American Council of the Blind convention in Chicago. Holly's talk is titled "The Evolution of Amateur Radio Information services" and will be presented to the ACB's amateur radio gathering. Haps talk will run about 30 minutes, so if you plan to be in the Chicago area or are attending the week-long convention, then stop by and take a listen to what KC9RP has to say. And oh yes. The admission to Hap's talk is free.

(*****
FRENCH ISLANDS

On the international scene the rumor mills says the French government is going to be doing a lot of electronic updating on the French islands located in the Indian Ocean this summer. As a result, it is thought that there may be a lot of amateur radio activity because of the French amateurs involved in this upgrading.

(*****
AUSTRIAN CALLS

The Austrian Communications Authority has opened a block of special call signs for special operations there. The 26 available calls are OE-A to OE-Zed, with the number assigned depending on the station's geographic location. 14 calls will be reserved for club stations of the Austrian national association, OVSV, with the remaining 12 available for others.

(*****
DX - 4U1ITU

KB2R, will be active from 4U1ITU in Geneva, Switzerland during the IARU HF Championship Contest on July 9 and 10 and two

days before. This will be a single operator effort and the 4U1ITU station counts as a HQ multiplier for the contest. Activity will be on 80-10 meters and possibly 160 meters. The two days before the contest, Len will be active as time permits on 80-10 meters CW/SSB and on the WARC bands if antennas are available. QSL the entire operation via WA2CJT, the bureau or direct.

(*****
DX - MICRONESIA

The DX NewsLetter reports that V63PA will stay on the island of Micronesia longer than expected. He prefers 14.150 MHz around 21:00 UTC during the weekend. QSL via G6MDM.

(*****
CLOCK ON HOLD

Great Britain's National Physical Laboratory has issued a notice that the 60KHz frequency and time reference transmitter at Rugby, will be closed down for essential maintenance between 12:00 GMT on 4th July 1994 and 12:00 GMT 18th July 1994. G1UXP who provided this information believes that the transmitter will be operational during the night hours in this period, but it will be off-air during the hours between 08:00 GMT and 16:00 GMT daily.

(*****
STU MEYER W2GHK, SK

Some sad news to report. Word that Stu Meyer, W2GHK, the former Chief Engineer and President of Hammerlund Radio Corporation became a silent key on Saturday evening, May 21st, of a heart attack. Among his many accomplishments was his being the driving force behind Hammarlund's "DXpedition of the Month" campaign during the 1950's and 1960's. He was a long-time member of the National Capitol DX Association, past president of NCDXA, and very active in NCDXA's DX operations of past years. W2GHK was also very active in many areas of ham radio, sponsoring one of the CQWW trophies. He will be missed by many of us in ham radio. In lieu of flowers, memorial contributions in his name can be made to the Radio Club of America or the QCWA.

(*****
BROTHER STAIR

For you hams who are also shortwave listeners, this from the shortwave BBS on GEnie. A report that Brother Stair of the Overcomer Ministry has stated that he had been offered an opportunity for a 24 hour a day shortwave broadcast facility from -- and we quote -- "...from another part of the country." -- end quote. This on his program aired on shortwave station WRNO on 7355 Mhz.
Brother Stair said he would not give the details after what happened with his radio ship the MV Fury. Listeners of Brother

Stair will remember the boarding of the radio ship by the FCC and
the confiscation of its transmitting equipment. This ended
Brother Stair's planned broadcasting project off the coast of
Belize.
Dollars to donuts the FCC already knows more about Brother
Stair's new broadcasting venture than he or the agency is letting
on. Its a good bet that the regulatory agency will be watching
this one real close.

[880]

Newsline report number 880 for release on Friday, June 24 1994
to follow.

The following is a QST

Postal authorities could be called to investigate the alleged California ham radio testing scam. Accusations are surfacing that some hams may have bought their licenses by mail! This story and more on Newsline report number 880 coming your way right now!

(*****
FRAUD SUSPECTED IN CAL VE TESTING SCAM

Charges of mail fraud could be levied against one or more of the Volunteer Examiners and several license applicants currently under government scrutiny in the ongoing California ham radio testing fraud probe. Newsline has learned that the FCC has interviewed a number of individuals in other parts of the country whose examination paperwork seems to indicate that they came to California to be tested by several of the suspect VE teams. According to usually reliable sources, at least one applicant clams to have driven over 2000 miles round trip in one weekend, just to be tested in Los Angeles. Another was found to be a resident of a South Eastern state.
Word is that the FCC does not believe that the examination sessions in question ever took place. That they were created on paper and are therefore fraudulent. And under the vigilant eye of Personal Radio Branch Chief John B. Johnston, W3BE, the commission is hard at work building evidence to make the charges stick.
The June 19th edition of the Westlink Report ham radio newsletter contains what it claims are quotes from the letters sent by Johnston to those suspected of complicity. It alleges that numerous testing sessions the VE's claimed to have sponsored never actually took place. That in some sessions that were held the applicants had access to the answer key for the test being given to them and most important. Most important, the FCC says that it had its own investigator listening in on the telephone when an informant cut a deal with one of the suspect Volunteer Examiners. A cash deal to purchase a ham license without the informant having to take a test.
If Johnston can prove that people purchased government licenses without having attended a test session, and if the United States Postal Service was used to convey payment, then the Postal Inspector can be brought into the case. Under his purview, charges of mail fraud can be brought against those who sold the bogus licenses and those who bought them.
The bottom line is that mail fraud is a criminal offense that carries heavy fines and mandatory jail time. The governments hard nosed approach to dealing with those it suspects of wrong doing in the California VE investigation seems to indicate that the government is prepared to take these cases all the way.

(*****
ARRL REPLIES TO VANITY CALL SIGN PLAN

The ARRL has filed reply comments in the FCC's proposal to institute a vanity call sign program as outlined in PR Docket 93-305. The League says that the vast majority of the 109 comments filed on the proposal favored it, with the major concerns being how to fairly administer it.
In its reply comments the league said that the issue of cost already had been settled, in that amateurs themselves would pay for the privilege of selecting a call sign. Regarding Silent Key call signs, the League said that by giving family members and clubs the first opportunity to apply for such call signs, well known and respected amateurs' call signs could be preserved.

(*****
ARRL TO W5YI: NO

The League says that a proposal by newsletter publisher and national VEC Fred Maia, W5YI of Dallas Texas to establish a "Vanity Call Sign Administration" program in the private sector, was not only not permitted within FCC's mandate from Congress, but would be cumbersome and bureaucratic, while adding no value for the applicant. Instead, the League urged the Commission to proceed with a Report and Order on the "vanity" call sign proposal, incorporating the minor modifications suggested in the earlier ARRL comments.

(*****
POWER REQUEST DENIED

The FCC has affirmed the Chief, Private Radio Bureau's denial of a request by Dale Gagnon, KW1I for a waiver of the Commission's rules governing transmitter power standards in the Amateur Service. Gagnon requested permission for his amateur station to transmit at power levels greater than the 1,500 watts authorized by the Commission's rules.
Gagnon requested the need for higher power in order to engage in long-distance communications. Gagnon also sought to avoid the cost of bringing his vintage transmitters into compliance.
Affirming the Bureau's decision, the Commission said that Gagnon had not submitted any compelling arguments why his station should be given preferential treatment over other amateur stations operated by licensees of the same license class. The Commission said also that there is no basis for permitting Gagnon's station to use greater power than other amateur stations, and to do otherwise, would be unfair to other amateur station licensees who must comply with the power requirement.

(*****
THE LONG WAIT RETURNS

The Amateur license application backlog is on the rise again at the FCC. The latest figures released are based on numbers that are three months old but do show a definite trend. As of Feb 1 st, there were applications 8543 were pending while on Feb 28 there were 12,868 awaiting action. This information is according to ARRL VEC Manager Bart Jahnke, KB9NM, who also says turnaround time in Gettysburg is hovering around the FCC's self imposed maximum of 90 days.

(*****
NEWSLINE

Heres a quick update on the financial crunch facing Newsline. Dr. Norm Chalfin, K6PGX, who administers the Newsline Support Fund reports that he has received enough in the way of sponsorship so that Newsline can continue at least through the end of August, but after that the service will once again be in crisis mode. That is, looking for enough money to avoid having its telephones and electronic mail services turned off. But the good news is that Newsline will not have to go bi-weekly over the summer since enough support has come in to see the service through though the next sixty days.
For information on how to help keep Newsline on the air, please talk off the air to the person running this bulletin on your repeater or net. Or you can write with a self addressed stamped envelope to Newsline in care of Dr. Norm Chalfin, K6PGX, Post Office Box 463, Pasadena, California 91102.

(*****
SERA TO MEET

A new ham television bandplan for the south eastern region of the United States could be on its way. This, with word in the Repeater Journal that the SouthEastern Repeater Association Board of Directors will hold their annual Summer Board meeting July 23-24 in Knoxville, Tennessee.
Directors and Vice Directors from each of the eight member SERA states will take up a number of band planning questions including addressing the bandplan for ATV operations in the region. Hams active and knowledgeable in the ham television mode have been invited to attend and participate in establishing a viable bandplan for the mode. Another item on the agenda will be the possible expansion of the SERA 440 MHz bandplan.
The SouthEastern Repeater Association is the nations second largest "regional umbrella" coordination body overseeing Amateur Radio relay communications bandplanning through member affiliates in Kentucky, Mississippi, North Carolina, South Carolina, Virginia, Tennessee, West Virginia and Georgia.

(*****
ATLANTIC DIVISION AWARDS

The ARRL Atlantic Division "Amateur of the Year" for 1994 is Bob Bennett, W3WCQ, of Towson, Maryland. Among his many contributions to Amateur Radio, Bennett, 58, co-anchors the "Answer Man Net" on the Baltimore Amateur TV Society repeater. After serving for nearly 10 years as the Atlantic Division representative to the ARRL UHF/VHF Advisory Committee, in 1993 Bennett was named chairman of the new ARRL Spectrum Committee. The Division's Technical Achievement award was won jointly by Bill Ferguson, WA3BXW, of Bristol, Pennsylvania, and Charles "Jim" Smith, K3ATI, of Newportville, Pennsylvania.
And the "Grand Ole Ham" is 94-year-old Dean Wallace, K2ANM, of Herkimer, New York. Dean was first licensed in 1919, as 8AAF. The awards were announced at the ARRL Atlantic Division Convention, held in conjunction with the Rochester (New York) Hamfest, on May 21, 1994.

(*****
HOLLY TO SPEAK

Rain Dial-Up producer Hap Holly, KC9RP, will make a rare personal appearance on July 7th at the American Council of the Blind convention in Chicago. Holly's talk is titled "The Evolution of Amateur Radio Information services" and will be presented to the ACB's amateur radio gathering. Haps talk will run about 30 minutes, so if you plan to be in the Chicago area or are attending the week-long convention, then stop by and take a listen to what KC9RP has to say. And oh yes. The admission to Hap's talk is free.

(*****
FRENCH ISLANDS

On the international scene the rumor mills says the French government is going to be doing a lot of electronic updating on the French islands located in the Indian Ocean this summer. As a result, it is thought that there may be a lot of amateur radio activity because of the French amateurs involved in this upgrading.

(*****
AUSTRIAN CALLS

The Austrian Communications Authority has opened a block of special call signs for special operations there. The 26 available calls are OE-A to OE-Zed, with the number assigned depending on the station's geographic location. 14 calls will be reserved for club stations of the Austrian national association, OVSV, with the remaining 12 available for others.

(*****
DX - 4U1ITU

KB2R, will be active from 4U1ITU in Geneva, Switzerland during the IARU HF Championship Contest on July 9 and 10 and two

days before. This will be a single operator effort and the 4U1ITU station counts as a HQ multiplier for the contest. Activity will be on 80-10 meters and possibly 160 meters. The two days before the contest, Len will be active as time permits on 80-10 meters CW/SSB and on the WARC bands if antennas are available. QSL the entire operation via WA2CJT, the bureau or direct.

(*****
DX - MICRONESIA

The DX NewsLetter reports that V63PA will stay on the island of Micronesia longer than expected. He prefers 14.150 MHz around 21:00 UTC during the weekend. QSL via G6MDM.

(*****
CLOCK ON HOLD

Great Britain's National Physical Laboratory has issued a notice that the 60KHz frequency and time reference transmitter at Rugby, will be closed down for essential maintenance between 12:00 GMT on 4th July 1994 and 12:00 GMT 18th July 1994. G1UXP who provided this information believes that the transmitter will be operational during the night hours in this period, but it will be off-air during the hours between 08:00 GMT and 16:00 GMT daily.

(*****
STU MEYER W2GHK, SK

Some sad news to report. Word that Stu Meyer, W2GHK, the former Chief Engineer and President of Hammerlund Radio Corporation became a silent key on Saturday evening, May 21st, of a heart attack. Among his many accomplishments was his being the driving force behind Hammarlund's "DXpedition of the Month" campaign during the 1950's and 1960's. He was a long-time member of the National Capitol DX Association, past president of NCDXA, and very active in NCDXA's DX operations of past years. W2GHK was also very active in many areas of ham radio, sponsoring one of the CQWW trophies. He will be missed by many of us in ham radio. In lieu of flowers, memorial contributions in his name can be made to the Radio Club of America or the QCWA.

(*****
BROTHER STAIR

For you hams who are also shortwave listeners, this from the shortwave BBS on GEnie. A report that Brother Stair of the Overcomer Ministry has stated that he had been offered an opportunity for a 24 hour a day shortwave broadcast facility from -- and we quote -- "...from another part of the country." -- end quote. This on his program aired on shortwave station WRNO on 7355 Mhz.
Brother Stair said he would not give the details after what happened with his radio ship the MV Fury. Listeners of Brother

Stair will remember the boarding of the radio ship by the FCC and
the confiscation of its transmitting equipment. This ended
Brother Stair's planned broadcasting project off the coast of
Belize.
Dollars to donuts the FCC already knows more about Brother
Stair's new broadcasting venture than he or the agency is letting
on. Its a good bet that the regulatory agency will be watching
this one real close.

(*****

SB SAT @ AMSAT $ANS-176.01
PHASE 3-D STATUS REPORT

HR AMSAT NEWS SERVICE BULLETIN 176.01 FROM AMSAT HQ
SILVER SPRING, MD JUNE 25, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-176.01

WD4FAB & DB2OS Provide Phase 3-D Status Report

The Phase 3-D Project Leader and AMSAT-DL President, Karl Meinzer (DJ4ZC) hosted six days of meetings, 13-18 June 1994 in Marburg, Germany to assess the status of a number of major areas of the project. In attendance at these meetings was Dick Jansson (WD4FAB), AMSAT-NA's Vice-President of Engineering. As a result of these meetings, the Project has ordered the solar arrays and is on the verge of ordering the spacecraft batteries. The selection of the machining contractor for the large aluminum rings for the 2624mm diameter SBS (Spacecraft Bus System) was also discussed and is quite close to being ordered. The SBS, which will be fabricated at Weber State University (WSU) in Ogden, UT, is a large cylinder that is part of the load carrying structure of the Ariane-5 launch vehicle. The Phase 3-D spacecraft is housed inside of the SBS for the ride into orbit.

Discussions were also held with Danny Orban (ON4AOD) on design refinements of the Ku Band transmitter (24 GHz) being constructed in Belgium. Some of these Ku Band transmitter refinements may also be applied to the X Band transmitter being constructed by the AMSAT-OH group at the Helsinki University of Technology in Finland.

One day of the meetings was devoted to very detailed discussions with Bernard LaCoste of the European Space Agency (ESA) regarding the launch configuration of the AR-502 vehicle and the testing that AMSAT will need to do inorder to qualify the Phase 3-D spacecraft and the SBS for their launch on AR-502.

Within the next month, AMSAT will conclude the ordering of the major components noted above. Also, in this near time period, the "flight" spaceframe will arrive at the Florida integration facility and start its final cleaning, paiting and assembly. The integration facility, located at the Orland Internation Airport, is in the final stages of being prepared for its mission of providing the specialized environ-ment for the spacecraft assembly activities.

[The AMSAT News Service (ANS) would like to thank WD4FAB and DB2OS for this bulletin item.]

[G3RUH/DB2OS/VK5AGR]

KO-25: The uplink of the KO-25 spacecraft has been recently switched to
145.870 MHz. In addition, the control station is indicating that a
reset of the On-Board Computer (OBS) is planned for 20-June-94.
[K6OYY]

DO-17: DO-17 still continues to transmit its voice message on a downlink
frequency of 145.825 MHz.

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly
OSCAR status reports. If you have a favorite OSCAR which you work on a
regular basis and would like to contribute to this bulletin, please send
your observations to WD0HHU at his CompuServe address of 70524,2272, on
INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO
area, WD0HHU @ W0GVT. Also, if you find that the current set of orbital
elements are not generating the correct AOS/LOS times at your QTH, PLEASE
INCLUDE THAT INFORMATION AS WELL. The information you provide will be of
value to all OSCAR enthusiasts.

4604. Re: ShareWare 'Super Morse' available?

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-27 02:19:51 UTC
From: adamsr@umcc.umcc.umich.edu
Message-ID: <2uld07$5v7@umcc.umcc.umich.edu>
Source record: 264615

Thus spake rpinder@hsc.usc.edu (Rich Pinder):

>As I passed my first couple of written tests today I asked the examinor
>(sp?) what the best way to learn code was. He said there was a shareware
>program for DOS pcs called 'Super Morse'.......
>
>Does anyone know an internet location to possible find this program??
>
It's available from:

oak.oakland.edu

via anonymous ftp. The file is:

/SimTel/msdos/hamradio/sm410.zip

You might want to browse around in that directory a bit--there are a
number of other excellent ham related programs there as well--including a
very well written series of theory lessons covering all classes from novice
to extra (by K7OMA) in the files nov22.zip through ext21.zip. K7OMA's morse
program (mor21.zip) is also there, and is an excellent code practice
program--particularly if you intend to run it in a dos window under Windows
3.11 (where sm doesn't seem as "comfortable").

Hope it helps!

4605. Re: What causes pitch shift in receiver?

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-27 02:28:19 UTC
From: jmollan@egreen.iclnet.org
Message-ID: <1994Jun27.022819.26279@egreen.wednet.edu>
Source record: 264616

Normally pitch shift is caused by instability in the transmitter or receiver. Once the rig is warmed up, this usually stops. You did not hear drift in commercial signals because they transmit double-sideband AM. Hams usually use cw or SSB where you must carefully beat an inserted carrier against the received signal to detect it. Any drift will will result in a marked changed of pitch.

If this is too technical, just remember that hams use much narrower band signals which can dridt easier.

Keep on listening
73,
John
AE7P

Nobody mentioned the relative field strength compared to dipoles. I've had impressive results. 3 - 6 db down, so either the Isoloop is highly efficient or the dipoles are not truly resonant and efficient (AEA's claims). I'll keep my Isoloop...

Andy N3LCW

4607. Re: What causes pitch shift in receiver?

>result in a marked changed of pitch.

Oh ok. This explains why the commercial signals are clear. I think this
receiver is *supposed* to receive SSB, as each freq appears twice on
the display, the second time with a small 's' showing. However, maybe
the small whip antenna is not good enough to allow the SSB circuitry
to work properly?

Actually tonight for a while, I was picking up some clear signals on
3.88 MHZ. Is this a weekly 'show' or get get-together? .. Perhaps
with the host transmitting with 1 kwatt? I did hear a couple of call
signs, W8----- something. I wonder if the propagation conditions happened
to be just right at the time.

Anyway, I guess the rainy weather the last few nights has not been the
best for radio. When I did finally hear a few minutes of strong signals,
it increased my level of interest in HAM radio ! The previous two nights
I was not able to hear much of anything. And when I visited a HAM store
here last week, I was'nt impressed with the signals I heard as the salesman
demonstrated a base station hooked up to a 'proper' tower antenna. Granted
it was during the day. He did finally pick up a fairly strong signal (I
thought anyway ;)) which turned out to be coming from Barcelona.

>If this is too technical, just remember that hams use much narrower band
>signals which can dridt easier.

No, actually it's just about technical enough right now ;) ... I've
been doing some reading, The ARRL Handbook, among others, and I have
read a bit about SSB. I was looking through the handbook under 'distortion'
to try to find the explanation of the pitch shifting. I thought maybe
what I was hearing was inter modulation distortion. Is it?

I tried to improve the antenna by attaching about 10 feet of wire to
the whip antenna. That didn't seem to make much difference. However attaching
a wire to the antenna and a water pipe *did* increase the signal strength.

Anyway, I *will* keep listening :)

Mike

Rob, I ran into the same problem when I started doing the local ARES
newsletter. There is no source that I could find. One of the gentlemen in my
HAM class is a commercial artist and we are working on a set of amateur radio
clip art to be distributed via shareware. It should be ready by the end of the
year.

I'm posting for a friend, please respond directly to
rrw21@cas.org

Can anyone on the net help me with a mod to an Icom IC-2AT?

I need to bring out a signal when squelch is broken.

For my application, that signal can either be a ground,
or a battery voltage level signal.

Does anybody know where in the circuit I can obtain that signal?

>

I don't know about bringing it into the country, but many (most?)
European repeaters require a sub-tone to operate, which is why you'll
see both US and European versions of the HTs in the catalogs. You may
have to get an add-on tone board from Icom for your HT to work there.

Also, in Europe the 2m band is smaller than it is here in the US,
topping out at 146MHz instead of 148MHz. And the 70cm band in Europe is
only 430-440MHz, so there may not be much activity other than
satellites there.

By the way, is DTMF paging allowed on repeaters? Don't you have to ID your paging?

I'm still waiting for my license but I heard few instances of paging over the repeater WITHOUT a call sign.

Perhaps you mounted it horizontally at low height. The difference
between horizontal and vertical mount at 10ft could be 5S or more.

: What causes the 'pitch shift' effect? ... I.e the person's voice sounds
: like it's been shifted down an octave or more, and also sounds like it's
: being fed through a flanger.

The problem is the cheap radio. No doubt it tunes in 1 kHz steps. To
reproduce voice accurately, you have to re-insert the carrier accurately.
A radio with 100 Hz steps may not be acceptable to finicky listeners.
10 Hz steps are usually good enough for almost everyone.

: Is it just that the receiver cannot isolate a particular frequency well
: enough?

: I did pick up a weak signal that I could barely make out the voice from
: all the static,however I could *clearly* hear the person's voice and exactly
: what he was saying, i.e. no pitch shift.

If you listen to enough signals, some will be tuned correctly.

Decided this year to work with the Laurel, MD ARA as W3DAD. As usual, you're never dressed for the weather - the t-shirt and shorts didn't work well at 50-55 degrees or whatever it was Saturday night - it was COLD!

As much as I lobbied to work in the QRP class, I was told that most of the people there weren't serious ops, and would probably get frustrated by the lack of QSOs and number of calls you had to make to get anywhere.

After living at home with a dipole, and suddenly having a 6-element tribander up on a 35' mast, it was a HUGE treat to be the "BIG SIGNAL" on the band. CW speed went up from 25 to 35 wpm, and I'm still hearing
CQ CQ FD de W3DAD W3DAD QRZ
ringing in my ears. A friend of mine, Simon, G0GWA, was on business from England, and joined the group with his extensive CW prowess. So if you include all the club members who showed up, and add Simon and myself, you have at total of:

TWO

CW operators. NOBODY in the club worked any CW. Of course, this was good for me since nobody had any desire to displace me from my seat, even when I got up to get something to eat.

Did I mention we only had one keyer for the two of us? Somebody ran home and got a Vibroplex paddle, but it was hooked up for a lefty. So I flipped it upside down, and used it as a straight, upside-down key, brushing up on my fist which had grown a bit rusty in the year I've had my keyer.

Again, as usual, a different and exciting experience, ending in a flurry of QSOs on 10 meter SSB, with FIVE contacts in the last TWO MINUTES of the exercise. I've never worked so fast in my life.

CU on the bands, 73 and hope y'all had fun

de NF3I

Did I mention the helium-filled blimp holding up the 160 vertical? Managed some 25 QSOs on that alone!

>since that's covered each time I change my address... :)

As long as you mail in your Form 610 for renewal BEFORE your license expires you may continue to operate past the expiration date ... if the new license does not show up before then. Be sure to keep a signed and dated copy of your 610.

If you wait until after the expiration date to mail your 610 then technically you should NOT operate until the new license arrives.

So, in theory, you could wait until 1 day before your license expires to mail in your 610 and then continue to operate past the expiration date... But if you waited until 1 day after then you should stay off the air until the new license comes. This question came up back in the mid-70's during the CB craze and FCC processing was taking 4-6 months.

Senator Barry Goldwater, K7UGA, appeared on the Ham Radio & More show this past Sunday, and was sensational, as usual. Senator Goldwater answered callers questions ranging from MARS to STI Defense Systems. Much praise was given to Senator Goldwater for his time given to the country.
Some quotes of interest included his support of the no-code license, and he said that since code is outdated and not used in the military anymore, he believes the time has come to do away with the code requirements, even though he throughly enjoys code and can be found on CW many times each week. He also believes that "our" ability to handle national emergencies is justification in itself for our existence, and he is VERY opposed to charging for a license.

Ham Radio & More can be heard each Sunday at 6:00pm EST on the Talk America Network in 23 cities and via satellite on spacenet 3, transponder 9, 6.8 audio. More info at 1-602-241-1510.

|> AM. Hams usually use cw or SSB where you must carefully beat an inserted
|> carrier against the received signal to detect it. Any drift will will
|> result in a marked changed of pitch.
|>

With my Radio Shack DX-440, after warmup, strong SSB signals (BFO on) would 'flutter' with pitch shifts that seemed to associate with audio strength. Pitch would go down at stronger signal strength, so that the signal almost sounded like vibrato. The onset of a word would cause a downward pitch dip, then recovery.
If you listened to a strong SSB station working a weak station, you'ld hear the shifting from the strong transmitter, not the weak one.

I would speculate that this is caused by the BFO not being stable with respect to power supply voltage. When the audio signal peaks, the audio output power stage draws down the DC power supply voltage. Then the BFO, working from the same DC, shifts in freq due to the DC voltage shift. When the audio subsides, the power supply recovers, as does the BFO. Plausible?

Source record: 264432
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

[[EXAMNT6.14 : 4163 in EXAMNT6.14]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and
10 weeks after the test session. The FCC considers their
processing time to be 90 days--from the date they receive the
application. The FCC usually receives the application one
to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will not receive a new license from the FCC.
The existing Technician license plus the CSCE conveying the Morse
code test credit is the only documentation issued for use of
the additional HF privileges.

****

The following test session information is provided by the
ARRL/VEC for the upcoming six to eight week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact
the ARRL Educational Activities Department (EAD) at 203-666-
1541 x219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to

MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541

Does anyone know where we can get the latest ver of Paket which
is ver 6.0 ?

The word is that it is out.

4627. 15m interference

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-27 15:52:10 UTC
From: sjhawk2@srv.PacBell.COM
Message-ID: <2umsja$g7d@gw.PacBell.COM>
Source record: 264434

This weekend four of us operated FD from a location high (8500 ft)
in the mountains of Northern Calif. On 15 meters we kept hearing
something that sounded like a cross between slow scan, pactor, and
the Russian Woodpecker. The individuals sounds were a little like
fax but a lot chirpyer and faster. The were very loud 40 to 50 over
S-9. The sounds would cover all of 15 meters a times. They would start
run for a while ruining the band for 20 to 30 minutes then go away for
a while. Several times the rep rate and chirpyness varied. I did not
have anything to tape it with or I would have. The interference was
only on 15 meters. Upon hearing it I immediately thought of the U.S.
version of the Russian Woodpecker, but I have never before heard anything
like this. I have two questions.
1. Did anyone else hear this.
2. Does anyone have any ideas what it was.

I got a list of the local police and shariffs departments from serveral of you but now I want even more!!! is there any that list the ones they refer to when they say go to channel 9 or goto cannel 3. This happens all the time with the san jose pd. They go there when they want to have a little more privacy or soemthing...

Also I am still looking for the meaning of all the numeric codes they use e.g. 415 is a disturbance or fight I think, 10-51 is under the influence or crazy or somehting like that any list of the meaning s of therse would be greatly appreciated.

Ed Hare (KA1CV) (ehare@arrl.org) wrote:

: Is this like telling a new ARRL non-ham employee that "lid" is a term of
: great respect among hams, then convincing the hapless newbie to go be
: respectful to Dave Sumner? :-)

Cruel!

Where I started, the newbie was told how special tools were kept in
the tool stores, and was promptly sent off to fetch one :

Newbie "I need the long stand"

Storeskeeper " How long do you want it for ?"

Newbie " Joe said I ought to be finished by lunch"

Storeskeeper " OK, just wait over there"

This was reputed to work very well on many occasions.

Cheers
David

4630. Clipart

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-27 16:10:18 UTC

The University of Warwick Amateur Radio Society is currently in the process of putting together some publicity for next year's fresher's fair. I've been looking for radio-related clipart to include, but to no avail (all I could find was an ARRL logo, which isn't much use in the UK). Does anyone have any ideas where I might find some on the net? (most formats will do).

Thanks a lot,

Rob (President UOWARS).

I don't think I've ever heard anyone call CQ on a repeater. Lots of
"xxxx monitoring" though. I always thought you'd like go to hell or something
if you even thought about saying CQ on a repeater ;-)

Actually "lid" is too kind a greeting for Mr. Sumner.

Yes that's right.. the ascerbic wit of KD1NR has returned. Jeez Ed.. I'm surprised they let you post without the official censor seeing that.

You know it's time to retire from the hobby when:

Shortly after obtaining your callsign "KA5MWD" and using the phonetics "Mississippi Water Department" or something similar, your XYL gives birth to twins and every ham for miles around dubbs you "Many Wet Diapers."
P.S. One harmonic was already running loose in the shack - in diapers.

4634. FIELD DAY 1994 REPORT

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-27 17:03:23 UTC
From: rossi@VFL.Paramax.COM
Message-ID: <1994Jun27.170323.18236@VFL.Paramax.COM>
Source record: 264440

FIELD DAY 1994

CALL : WA3NNA

ENTRY CLASS : 1B - battery - 1 operator

SECTION / LOCATION : SNJ
Between 21st and 22nd Street; Ocean City NJ.
On the beach; About 50 yards from the ocean.

RIG : OHR Classic (5 watts CW - 20 & 40 meters)

ANTENNA : half-wave vertical wire - supported by a kite.

POWER SOURCE : 12V Ni-Cad battery pack

TOTAL ON-AIR OPERATION TIME : Less than 8 hours

FINAL SCORE:
73 QSOs on 40
35 QSOs on 20
-----
108 TOTAL QSOs (x2) CW (x5) 5 watts = 1080 points
100% emergency power = 100 points
Operation from a public place = 100 points

TOTAL SCORE = 1280 points

COMMENTS :
The thunderstorms never materialized but the winds more than made up for it. High un-cooperating winds kept the kite antenna from flying early Saturday afternoon. Finally (with a longer tail on the kite) I was on the air shortly after 2100z. Operated from the beach from about 5 PM Saturday until dark and then returned 9 AM Sunday. 40 meters was much better than expected. 20 seemed much worse than last year. Tried a couple CQs and worked 3 stations but the rest were all from just tuning and calling. In general, was able to work about 80% of what I called.

LESSONS LEARNED: ;-)
Delta kites do not like high winds unless they have a *very* long tail.
A half-wave vertical on 20 works better than a full-wave vertical.
Use a dupe sheet next year. Memory starts to fail after about 50 QSOs.
You can still get a nasty sunburn even under a beach umbrella >ouch!<
FD is too short. All of this preparation for only a few hours on the air.

Source record: 264459

Hello,
I am setting up FBB with BPQ. All is well except when FBB does a
outgoing connect. It always says its on channel 1 of BPQ even though it
is actually on port 3 or 4. Incoming connects are always correctly labeled
as to what port they are. Did I miss something in BPQ or FBB? It works as
is, but I would like to make the labels identify the correct port on out-
going connects.
Thanks for your time and input. Please E-mail to the following address:

Well, Scott, about 70 or so miles to the west in Leesburg, VA, where we had a super nice Field Day site set up at Ida Lee Park, the winds were so strong on Sunday that your vertical would have been a sloper or maybe even a horizontal!! :-)

I won't tempt the FD gods by complaining about cold weather.

Greetings, all.

As I have not achieved critical mass in the number of orders for the Motorola GPS engines, I am shutting down the group purchase.

I am on vacation for the next two weeks. If, upon returning, there has not been enough orders received to reach the magic 100 mark, I will be returning the checks to those who have sent them to me, and discontinuing any efforts in this area. As of now, I have orders for about 35 units. For those of you interested, that's about $13,000 sitting on my desk.

Thanks for your time, efforts and wonderful interest in this matter.

Regards,

Tom Bonomo

Trying to convince people that just because it was worse in the past doesn't mean that what we have now can't be made better and waiting to see how the new FCC computers will improve things once they clear the backlog. Working with the ARRL to keep folks waiting for their tickets informed of the current waiting period via an Internet WWW server, providing the latest info from the FCC on the assigned callsigns in each district, etc.

Pray tell, what are your contributions to society, besides the above quoted gem?

Ham Radio Operator Assists in Catching Car Thieves
Cathy Dicker
Chris Dicker
Scott Diamond (KB7ZHB)

On Sunday night at 11:30 p.m. on June 12, 1994 I was almost asleep when our teenage son, Chris, came bursting through our bedroom door exclaiming that someone across the street was trying to break into a car. With two teenage sons and an eleven year old son in our house, it seems like the kids are always hearing strange noises. My first reaction to this news was to cover my head with a pillow and try and get back to sleep. Fortunately, my girlfriend Cathy decided to see what was going on.

While half asleep I overheard her and Chris discussing what they had seen. Apparently a man and woman had driven up and down the block on a motorcycle and when they approached the vehicle across from our house, the woman on the motorcycle had said, "this ones open". She then got off the motorcycle and the motorcycle drove away. She entered the vehicle on the passenger side, moved over to the driver side and was adjusting the seat, steering wheel and grabbing at the dash. At this point, my girlfriend Cathy yelled back to me that I really should get out of bed and look at what was going on.

As I walked to the window to watch, Cathy yelled down to the woman, asking her if that was her car and what she was doing. She was out of the car at this point and yelled back that the car was her friends and that her boyfriend was going back to get the key. Cathy yelled back "Well then you won't mind if we call the police". At this, the woman shrugged, reentered the car and continued moving the seat and messing with the dash. We were starting to get pretty suspicious so we went ahead and called 911.

After a couple of minutes her boyfriend came back on the motorcycle and Chris overheard her telling her boyfriend that we said we were calling the police. The boyfriend said that he would meet her at home and then drove off. She stayed in the vehicle for a couple more minutes continuing to mess with the dash and then she got out and started walking down the street.

When she started walking down the street we got really suspicious. Maybe it was her friend's car but why wouldn't she wait by the car? Why would she walk away? Chris decided he would follow her and see where she was going and in addition he brought along a pencil and sheet of paper. If the motorcycle came back again he wanted to write down the license plate number. I thought about what was happening and decided that this was just too odd. I try not to invade in my neighbors private affairs but I wanted to see where she was going. Dressed only in my bathrobe, I got my car keys, wallet, handheld ham radio and went out to the car to follow her.

It was overcast and rainy and by the time I got out onto the street I couldn't see where she had gone. I drove down the street and saw Chris on the corner. He pointed down the street where she was and got in the car.

I had my ham radio with me. For those of you not familiar with ham radio, there are local repeater stations which receive your incoming signal, amplify it and rebroadcast the signal, thus allowing local ham operators to cover a large area with their signal. In addition some of these repeaters are connected to phone lines and if you are a member of a ham radio club you can use these repeaters to make local phone calls. I was a member of the local K7WWR repeater and I had used this repeater many times over the winter on cross country ski trips when we wanted to check to see how the kids were doing at home.

I'd programed my handheld ham radio with the tone sequence for home so I called home to see if the police had stopped by (at this point we were only two blocks away from home). There was no answer on the phone at home and I figured she was talking to the police. We still slowly followed the woman.

During the whole time we were following her we stayed back about one hundred yards. I didn't stay back to hide, a car with it lights on crawling along at walking speed 100 yards behind you is pretty noticable, but instead I stayed back because at this point I wasn't all that certain that she was guilty and I didn't want to scare her. I kept at a nonthreatening distance so she wouldn't be scared and besides if she really was dangerous and had a gun I didn't want to be too close anyway. I'm sure she saw us behind her, but she probably didn't realize that while following her I was using my ham radio to try and call home and that I could use it to contact the police if necessary.

After a couple of minutes I called home again. Cathy answered this time and said the police had stopped by and they said the car had been punched. Meaning that someone had tried to rip out the ignition. It was sure looking like the person we were following had tried to steal a car. Cathy had told the officer in the car that we were out following the woman. Cathy told the police to look for our car and that I had a ham radio and would probably be trying to contact them. The policeman didn't really understand this. After all how could I contact the police with a ham radio? He asked Cathy if she was in constant radio contact with me. Cathy explained to the policeman how I could make a phone call and the policeman then drove off to see if he could spot my car. At this point we were about five blocks away from our house.

After Cathy told me about the car being punched, I decided I should call 911 directly. My handheld ham radio can store up to four phone numbers in it's memory. Fortunately, just two weeks before I'd thought, if I'm ever in an emergency I'm going to be too nervous to enter the correct tone sequences. At that time I'd gone ahead and assigned one of my autodial sequences to 911. I signaled the repeater up and made the connection to 911. At first there was some confusion because the repeater is located in Portland and when I described our location they weren't sure where we were in Portland or Vancouver. Once they realized I was in Beaverton they

transferred the call to the Washington County 911. I repeated my story with the Washington county 911, they said I should contact the Beaverton police dispatch directly and gave me a number. I explained that I was using my ham and that it was difficult to redial and asked if they couldn't transfer. The operator said she was transferring me but that if I got disconnected I should dial directly.

We were now about eight blocks away from home and were finally connected to the right dispatch. At first the Beaverton dispatch wasn't sure what we were calling about but she soon connected our call with the search the police were doing in our area and asked for our location. At this point it was really exciting for us in the car. The woman who broke into the car was walking down a number of small streets and throughout our conversation with the Beaverton dispatcher we were relaying our position as we turned onto each street. In our minds we imagined her relaying our coordinates over the police radio to the local patrol cars and the patrol cars zeroing in on our position.

Up ahead of us we saw two cars that had turned down the road we were on. It was too dark to see the cars but we thought they might be police. As they got closer I saw that they were police cars and I flashed my bright lights as they went past. Quickly, I told the dispatch that the cars had just passed me and that they needed to turn around. The police went one more block then turned around and headed back our way. I leaned out my window as they came up from behind. The lead police car pulled alongside of our car and I pointed out the woman we had been tracking.

Both police cars went ahead and pulled up alongside of her, and at that point a third police car showed up. As the police cars pulled up, it looked to us like she was trying to cut through the nearby houses to avoid them. Fortunately the police were too close and jumped out of the car to question her before she could go anywhere. At that point we headed home, elated that we'd been able to direct the police to her after tracking her for ten blocks.

Later that night the police came to tow away the car across the street from our house. It turns out that the car was stolen. I don't know why they broke into a stolen car. This is just a guess but perhaps it had been stolen earlier in the day and left in a 'safe' place before taking it to a shop to be taken apart at night. The police called back later that night at 1:30 a.m. and then at 2:30 a.m. (I was too excited to sleep much anyway) to ask us for the details of what we had heard and seen. The officer we spoke with said that several arrests were occurring as a result of catching this person.

4640. heathkit info. needed

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-27 18:04:25 UTC
From: rdw@news-server
Message-ID: <2un4ba$2i2@nic-nac.CSU.net>
Source record: 264449

I have purchased a Heathkit model HW-16 and it's companion VFO (HG13). Being new to Ham radio, I am confused as to how to interconnect these two units. I received a partial manual, but it does not have any illustrations on how to put these two units together. I know that the manuals are not complete as they are photo-copies of the original and there is not enough information for me to get things up and running. Does anyone out there know of a source for complete manuals or perhaps that might be familiar with these units. I believe that Heathkit is out of business. I can receive signals, but can't seem to get this thing together for transmitting. Thanks in advance for any help. KE6FDU (new novice and still not on the air!!)

MONDAY JUNE 27, 1994

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited distribution.

* DOVE TESTING CONTINUES *
==========
At about 6/11/94 05:30 UTC controllers completed a reload of the DOVE software and activated another voice test. The pronunciation of the word 'Hi' is a bit different and the overall amplitude of the voice is higher.

Controllers expect to continue the hardware testing process after a period of software development on the ground that will probably last several days to a few weeks.

The following packet frames were received from DOVE by KD2BD late last week:

DOVE-1>TIME-1 <UI>:
PHT: uptime is 014/02:11:51. Time is Fri Jun 24 16:11:31 1994

DOVE-1>BRAMST <UI>:
0500 utc 14 June 1994

Voice Module now active
Software testing continues
S-Band transmitter is off

73 DOVE Command Team (WJ9F)

Reception reports of how well the voice is heard with simple receiving equipment (like an HT and rubber duck) would be appreciated. Please send reports via the Internet to WJ9F, PY2BJO, WD0E, VK7ZBX, or N5AHD @amsat.org. Telemetry is not needed at this time.

[Info via Jim White, WD0E, of the DOVE command team]

* STS-65 SAREX INFORMATION *
==========
Shuttle mission STS-65 using orbiter "Columbia" is scheduled for launch on 08-Jul-94 at 17:06 UTC for a 14-day microgravity scientific mission.

A SAREX package in configuration 'C' will be carried on Columbia on this mission. Crew members Donald A. Thomas, Mission Specialist, KC5FVF, and Robert D. Cabana, (callsign?) are among the licensed astronauts flying on mission STS-65.

The primary payload for STS-65 is the International Microgravity Laboratory (IML-02), that includes a complement of international experiments with its main focus on materials and life sciences research in microgravity. The payload crew members will perform the experiments in a "gravity gradient" stabilized attitude (shuttle tail pointed toward Earth) to maintain the best possible laboratory conditions with the least gravitational disturbances in the Spacelab.

One of the secondary payloads will be the Shuttle Amateur Radio Experiment. SAREX configuration C consists of a 2-meter handheld transceiver, I/F module, PGSC, spare battery set, window antenna, packet module, SAREX headset assembly, personal recorder, and required cable assemblies. The packet module contains a power supply and packet TNC. The power supply provides power for the TNC and the handheld transceiver. The TNC interconnects with a radio transceiver so that data to and from the computer is transmitted to and received from other amateur radio stations. Configuration C is capable of operating in either the voice or data mode in communications with amateur stations within LOS of the Orbiter. This configuration can be operated in the attended mode for voice communication and either the attended or automatic mode for data communications. The payload control weight for SAREX configuration C is 45 lb (20.41 kg).

SAREX sponsors include the American Radio Relay League (ARRL), The Radio Amateur Satellite Corporation (AMSAT), and The National Aeronautics and Space Administration (NASA). SAREX is supported by the Federal Communications Commission (FCC).

The crew will use separate receive and transmit frequencies. PLEASE DO NOT transmit on the Shuttle's downlink frequency. The SAREX frequencies for mission STS-65 are as follows:

Voice Downlink: (Worldwide) 145.55 MHz [Receive Only]
Voice Uplink: 144.91, 144.93, 144.95, 144.97, 144.99 MHz
Voice Uplink: (Europe only) 144.70, 144.75, 144.80 MHz
Packet Downlink: 145.55 MHz
Packet Uplink: 144.49 MHz

KC5FVF is the callsign that will be used for making voice contacts. W5RRR-1 will be used for packet radio connections.

QSLs and reception (SWL) reports should be sent to the ARRL EAD, STS-65 QSL, 225 Main Street, Newington, CT 06111, USA. Include the following information in your QSL or report: STS-65, date, time in UTC, frequency and mode (FM voice or packet). In addition, a large, business sized SASE must be included if you wish to receive a card in return. The Lake County Amateur Radio Club in Munster, Indiana, has generously volunteered to manage the cards for this mission.

The following is STS-65 Keplerian element set JSC-003:

==============
As of 20-Jun-94, VE2TRV, has started translating SpaceNews into French for the francophone VE2-population. Mike has noted a lot of recent interest in astronomy and space-related subjects, and believes the French language version of SpaceNews will become very popular. Mike has been translating some articles from SpaceNews for the Laval Laurentian ARC newsletter, and reports the 360 members really appreciate it.

My thanks to VE2TRV for the time and effort of performing the language translation!

* RS-14 / RS-10 OBSERVATION *
============================
During a recent pass of RS-10 over the central United States, OSCAR-21's (RS-14) CW beacon (145.822 MHz) was observed through RS-10's ROBOT on 29.403 MHz at 21:36 UTC on 24-Jun-94.

Orbital analysis showed RS-10 over southern Oklahoma and heading south, while RS-14/AO-21 was over the east coast of Mexico and heading north when the beacon was heard.

Although RS-10's ROBOT input passband (centered on 145.820 MHz) is several kilohertz wide, RS-14's telemetry was heard for only a short period of time because of the high relative motion between the two spacecraft. The Doppler shift this motion produced was well in excess of the ROBOT input passband. The beacon received from RS-14 by RS-10 drifted quicky through the ROBOT passband as the two satellites passed one another over the south central United States.

* THANKS! *
===========

Thanks to all those who sent messages of appreciation to SpaceNews,

This actually happened. I was giving a commercial license exam, and this ham came in to take his GMDSS Repair license exam (element 9, for you who know the commercial regs) to go along with his General Radiotelephone Operator's License (GROL).

Anyway, we need two forms of picture ID, so he starts flipping through his wallet, and I see what looks like a pictures of equipment. I ask, and he shows me a beautiful picture of his mint condition Collins KWM-2 station.

He has no pictures of his family (wife OR kids), but he does have a picture of his HF station...

No kidding!

: > I agree ...

: For what it's worth, I have a much less enthusiastic tale...
..
: How about this as a test? Put a 50-ohm 200 watt dummy load in the
: air at 40 feet, and see how well you get out? You'll be amazed.
: BTW other problems we had was the receive using the Iso-loop was
: down about 2 S units from the dipole, and we had to turn off all the
: computers because RF was getting into everything.

I wonder if your Isoloop might have had a problem. The computer RFI
could be a clue: I would expect the Isoloop to have less RFI than the
3.5 MHz dipole since the dipole is probably closer to house wiring etc.

I recently bought a used original Isoloop (14-30 MHz) that I was going
to use on Field Day. My plan was to put it up on a 50 foot mast, with
two of the mast guy wires acting as an 80 meter inverted vee fed on both
80 and 40 meters with 75-ohm twinlead into a Johnson Matchbox tuner.
However, I found that even on 20 meters, the 80 meter inverted vee
performed the same as the Isoloop. I did an A/B comparison using a
coax switch so I could instantaneously compare the two antennas using
off-the-air signals -- I could see no significant difference. Of course,
neither antenna did nearly as well as my TH7 tribander at 55 feet!

So I didn't take the Isoloop along on Field Day. Since the 80 meter
dipole performed just as well, even on the higher bands, and since
the dipole + matchbox had greater bandwidth than the Isoloop (less
retuning), I just used the dipole on all bands.

: Even with the slower stepping, tuning was a real pain in the bum. ...

I found that using an MFJ SWR analyzer with the Isoloop works great.
Use an antenna switch so you can easily connect the analyzer to the
antenna, tune the analyzer until you hear the whistle in the receiver,
and tune the antenna for a dip.

Bottom line: The Isoloop would be a good solution for some situations such as operating from an RV in a campground or from an apartment situated such that you could put up an Isoloop but not a dipole. But I agree that for most people, $300 is a lot of money to spend for an antenna that is almost as good as a dipole.

: >I have aquired some sealed lead acid cells (plastic pack containing 6
: >cells rated for 5AH) and am trying to figure out the proper charge
: >current for them. I don't want to over-charge them (or under charge)

: Lead acid batteries are normally charged with a constant voltage
: charger. For a nominal 12 volt battery, charger voltage should be
: 14.5 volts during charge, and 13.8 volts during sustain. Auto chargers
: use a saturable core transformer to limit initial charging current,
: cheap and effective. You'll have to install a current limiter when
: using ordinary transformers. Current should be limited to 0.1 C
: for gell cells, 0.33 C for wet cells, where C is the amp-hour rating.
: An auto tail light bulb will do as a current limiter for your gell
: cell. Just put it in series between the 14.5 volt source and the
: battery. It's resistance is non-linear depending on current draw,
: so it'll allow near full voltage at low current, and drop the
: voltage as current draw increases, forming a self-regulating
: system. Crude, but effective.

This is okay as long as you remove the charger after the battery
is charged. Otherwise, you will overcharge the batteries,
possibly running them dry. A better charger will drop the voltage
back after the battery is charged. The Unitrode 3906 does this.
It also compensates for the battery temperature, though I assume
this only works if you run the chip cool and keep it at the same
temperature as the battery. This chip can be obtained from both
A and A Engineering (see ARRL Handbook chapter 35 for a suppliers
list) or Allied Electronics (according to their latest catalog).
A & A also sells boards/kits/finished units.

A smart charger works by sensing the voltage and current--if the
battery is taking lots of current at 13.8 volts, it needs to be charged
fully. On the other hand, if there is just a trickle of current, you
want the float voltage to maintain charge.

Well, I'm not an Isoloop advocate, but it definitely sounds like there
is something wrong with your unit. It should be within a dB or two
of a dipole at the same height on all bands.

(Now, whether it's worth the money or not is another question...)

I have several friends with "after market" antennas on their 580's,
while I have always used the origional. We have never noticed any
differnce. ANY shortened antenna is NOT going to work as well as a full
size antenna.

What you are hearing is ingle ide and, commonly called SSB
which, unlike the broadcast signal you can hear well, has no carrier.
The carrier has to be inserted at the receiver. It (the insertion
device) is called a eat renquency scillator (a BFO) which
reinserts the carrier at the receiver. If you want to listen to the
stuff, you will have to get a communication receiver. 99% of the
conversations by voice between Amateur Radio operators (Hams) between
1.8 and 30 Mhz is on SSB.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 27/2330Z JUNE 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 27 JUNE AND FORECAST UP TO 30 JUNE

IPS Disturbance Warning 17 was issued on 22 June and is current for
interval 24 June to 4 July

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 073/009

GOES satellite data for 26 June
Daily Proton Fluence >1 MeV: 4.8E+05
Daily Proton Fluence >10 MeV: 1.4E+04
Daily Electron Fluence >2 MeV: 5.3E+06
X-ray background: A3.9
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
28 June 29 June 30 June
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 075/013

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled

Estimated Indices : A K Observed A Index 26 June
Learmonth 14 3333 3233
Fredericksburg 25 25
Planetary 25 25

Observed Kp for 26 June: 3444 4454

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
28 Jun 20 Unsettled to active.

29 Jun 16 Unsettled to active.
30 Jun 16 Unsettled to active.

2C. MAGNETIC COMMENT
Unsettled to active conditions expected. Activity has been stronger
in northern hemisphere.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
27 Jun normal fair fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
28 Jun normal fair poor
29 Jun normal fair poor
30 Jun normal fair poor
3C. GLOBAL HF PROPAGATION COMMENT
Degraded HF comms expected at mid and high lats for next 3 days.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T index for 27 June: 33

Predicted Monthly T Index for June is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
28 Jun 15 About 15% below predicted monthly values.
29 Jun 30 Near predicted monthly values.
30 Jun 30 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Geomagnetic activity in progress. Degraded HF comms expected at times
until July 4. Strong sporadic E observed yesterday.

Local customs and procedures vary. Here in Detroit area it is not uncommon
to hear a "CQ" call (not the old 40 phone "seeee cueeeee seeeee cueeee"
for ten minutes, just a "CQ from W8xx" This is used interchangeably
with the "xxx monitoring" call, which just announces one's presence
on the freq. just in case any of your pals are around and want to talk.
While travelling thru upstate NY, I did monitor a QSO for about
twenty minutes while an old timer and newcomer argued vehemently about
whether it was ok or even LEGAL to call CQ on a repeater. Lots of
time on their hands I guess!

Well I don't expect much from this radio that's for sure. As a matter of
fact it *does* tune in 1 kHz steps. Smaller tuning steps make sense.

I just found some info in the 1993 ARRL handbook (page 12-28 radio receiving
principles) that says most commercial receivers use 250-600 Hz bandwith
filters for CW and 1.8 to 2.7 kHz filters for SSB.

What is the frequency resolution in most HF transceivers ?

Contest report no. 2

Contest logs are starting to flow through the system already. There are some very promising logs in already, in the way of scores. We will keep you updated with news as it comes to hand.

We have some news regarding the WAADCA RTTY mailbox at Wireless Hill. It is apparently growing faster than expected in one of its function -- White Page server -- and has outstripped its memory in that regard. Whatever, we are sure that it will be back, doing what it is expected to do, very soon.

All one can say is that if that is the cause, the mailbox is a resounding success and congratulations to all those amateurs making use of this facility. By the time you read this, the mailbox may be back up but, in any case, it is good to see that the mailbox is proving so popular.

SUMMARY OF ACTIVITY

Solar activity was very low all week.

The geomagnetic field at Learmonth (WA) was quiet to unsettled 17th-22nd June, with brief active periods from 0900-1500UT on 19th; and quiet on 23rd.

Ionospheric F2 critical frequencies at Sydney were near predicted monthly values 17th, and 20th-23rd June, and near normal to 20 per cent enhanced on 18th-19th.
.
FORECAST FOR THE NEXT WEEK (24 - 30 June)

SOLAR: Very low.
GEOMAGNETIC: Active June 24 - July 4 (coronal hole).
IONOSPHERIC: Depression of 15 per cent probable on 25th.
Degraded HF comms quality expected all week due to anticipated geomagnetic activity.

Courtesy of IPS Radio and Space Services, Sydney

NOTES OF INTEREST:
THE EINDHOVEN STUDENTS RADIO AMATEUR CLUB WILL GO ON A DXPED-
ITION TO LICHTENSTEIN, HB0, 6-12 JULY. ACTIVITY IS PLANNED ON
ALL 9 HF BANDS, 6M, 2M, AND 70 CM. ON THE WEEKEND 9/10 JULY
THEY WILL BE IN THE IARU HF CHAMPIONSHIP CONTEST. THEY HAVE
REQUESTED THE CALLSIGN HB0TUE, BUT MAY HAVE TO USE PERSONAL
CALLSIGNS /HBO. QSL TO PI4TUE VIA BUREAU OR CBA.

AVES ISLAND WILL BE ACTIVATED AGAIN, ON DIGITAL MODES, SSB AND
CW, BY THE RADIO CLUB VENEZOLANO USING THE CALL YW0RCV FROM
21-25 JULY. ALL BANDS EXCEPT WARC WILL BE USED. QSLS GO TO THE
IARU BUREAU, YV5AJ, RADIO CLUB VENEZOLANO, P.O. BOX 2285,
CARACAS 1010-A, VENEZUELA. WITH RETURN POSTAGE IN EXCESS OF
ONE IRC.

FOR NEXT WEEK'S BULLETIN, BOB, WB2CJL WILL BE PINCH HITTING FOR LUCIANO, I5FLN. PLEASE SEND YOUR BANDPASS AND NOTES TO WB2CJL AT W5KSI.#NOLA.LA.USA.NA OR AT I5FLN.ITA.EU

73 AND GOOD HUNTING DE JULES W2JGR AT W5KSI.#NOLA.LA.USA.NA

(VIA HF AMTOR)

ARLD036 DX news
The items in this week's bulletin are courtesy of Art, K9XJ, John, KB5QKS, The Ohio/Penn DX Bulletin, Chod, VP2ML, The DX Bulletin, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column in QST. Thanks.

CAMBODIA. Sanyi, HA7VK, will be active as XU7VK until February 1995. Listen on 20 meter SSB between 1245 and 1400z.

ANGOLA. The Red Cross will be sending Peter, ON6TT, to D2 land June 16 to July 16. He plans to be active on the low bands and the WARC bands. Commercial equipment will be used, so split operation will not be possible. QSL via ON5NT. After his stay in Angola, Peter will be active from Malawi until August 1.

KERGUELEN ISLAND. Pierre, FT5XJ, was recently heard on a DX net on 14226 kHz at 0530z. He plans to leave the island in July but will return three months later. QSL via F5NLL, listed as F1NLL in the Callbook.

BENIN. DJ4IJ, is active as TY1IJ, mainly on SSB and the WARC bands. Check 14275 kHz around 2200z. QSL via DJ5IO. TY1PS was active last weekend in the RTTY contest. QSL via Peter Schulze, B.P. 06-2535, Cotonou, Benin.

CENTRAL AFRICA. Gene, TL8NG, has been busy with CW on the WARC bands. Check 12, 17 and 30 meters between 1330 and 1600z and again after 0430z. He also shows up on the 21335 DX net around 1400z. QSL via WA1ECA.

THE GAMBIA. Uli, C56/DK2OC, and Brendan, C56/G0UCT, will be closing down operations shortly after this bulletin starts making the rounds. QSL C56/DK2OC via DK2OC, and C56/G0UCT via G1GMZ.

CAPE VERDE. Angelo, D44BC, has been heard on 17 meters and RS12. Check 18128 kHz around 1130z. Listen on the satellite downlink between 29430 and 29445 kHz from 1200 to 1430z.

TONGA. Paul, A35RK, will be going QRT June 18. Tune between 14175 and 14226 kHz from 0330 and 0500z. Also, check the low end of 40 meters for his CW at 1330z. For RTTY QSOs, try around 14086 kHz during the same times. QSL via KK6H.

VANUATU. YJ0AVH frequents 14196 kHz between 0230 and 0600z.

ARUBA. Art, K9XJ, will be signing P4/K9XJ or P40XJ June 16 to 23. This will be a casual operation with most activity on the Novice/Tech Plus frequencies. QSL to his Callbook address.

LIECHTENSTEIN. Eight members of the Eindhoven Students Radio Amateur Club, will be active from 1800z July 6 to 1200z July 11. This all band, multimode operation will also include 6 and 2 meters, and 70 centimeters. Their main emphasis will be taking part in the IARU HF Championship on CW and SSB and the CQ WW WPX VHF/UHF Contest. The group has requested the call sign HB0TUE for the entire operation. If they cannot get the requested call sign, operators will sign HB0/ and their personal call signs. QSL via PI4TUE.

MALYJ VYSOTSKIJ ISLAND. R1MVI will be active during the Russian DX Contest, July 30 and 31.

TURKS AND CAICOS ISLANDS. Will, AA4NC, plans to sign VP5NC in the IARU HF Championship on SSB and CW. There will be activity before and after the contest on the WARC bands. QSL via CBA.

SIX METER DX. John, KB5QKS, reports that 6 meters has been great so far this season. His recent DX contacts include: C6APF, HH2PKB, HH7PV, KP4SQ, TI2NA, TI4JHQ, WP4KJJ, XE3EB and XE3WP. PacketCluster spots show this to be an outstanding sporadic E skip season.

THIS WEEKEND ON THE RADIO. The All Asian DX Contest, CW, sponsored by JARL, is from 0000z June 18 to 2400z June 19 on 160 through 10 meters. Exchange signal report and a two digit number denoting operator age. YLs and XYLs may send signal report and 00.

The SMIRK QSO Party, sponsored by the Six Meter International Radio Klub, runs from 0000z June 18 until 2400z June 19 on six meters only. Contacts between stations in the 48 contiguous states must be made above 50.125 MHz. Exchange call sign, SMIRK number and grid square.

More detailed information on both of these contests appears on page 138 in May QST.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD, or the Secretary (Pat) VK2JPA at VK2RWI.

News items may be sent to Broadcast Officer PO Box 60
Blacktown 2148 Australia, or by packet to VK2JPA at VK2RWI.
Email addresses for the Broadcast Officer are :

patl(at)pitt.conmusic.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We know we reach New Zealand and many South Pacific islands, and we were reaching as far north as Japan when conditions were right. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer
That concludes the broadcast for this morning/evening.

Co-ax cable isn't just used as a transport medium, there are also some
low Z cables made for use in transformers.

These live in specialist manufacturer's catalogues and often don't have
Radio Guide numbers.

Actually this radio changes the digital display in only 10 khz steps.

Is there a DSP algorithm that could be used to render intelligible speech
from the mistuned signals?

4663. Mobile HF Noise Problem

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-28 10:36:56 UTC
From: gb@dixie.cs.unc.edu
Message-ID: <GB.94Jun28103656@dixie.cs.unc.edu>
Source record: 264378

I'm having lots of fun mobiling with my new Kenwood TS-50 and 20 meter HamStick antenna. My only problem is engine noise :-(

I have no alternator whine but I do have what appears to be ignition noise (the sound is rough and varies with engine speed, at low speeds there are distinct pops). It definately comes in through the antenna and not through the power leads. It runs about S5 to S7 on the TS-50 meter. The TS-50 noise blanker is effective against it at idle but not at highway speeds.

My car is a 1993 Plymouth Acclaim 4 cylinder. The body seems well bonded together electrically because I measure fractions of an ohm resistance between various body panels (including the trunk lid) and the negative terminal of the battery. The fused #10 power leads from the TS-50 are connected directly to the battery. My antenna is temporarily on a mag-mount on the trunk lid. Connecting a heavy wire from the mag mount to the body does not reduce the noise.

So, HF mobile elmers, what should I do to reduce this noise? I'm sure there are tons more stations to hear and work....

Thanks and 73
gb wa4fut

4666. Neat FD Antenna

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-28 13:44:47 UTC
From: hpb@hpb.cis.pitt.edu
Message-ID: <2up9gf$9jd@usenet.srv.cis.pitt.edu>
Source record: 264476

At the Panther Amateur Radio Club's (PARC) Field Day, we found that an automatic antenna tuner is good for more than just loading up short mobile whips.

Our main FD antenna was a full-sized 80M Zepp dipole. One end of the antenna was attached to the roof of a 10 story building, the other end to a tree below. The antenna was fed with 300 ohm twin lead that eventually connected to a 4:1 balun. For an transmatch, we borrowed an SGC-230 automatic antenna tuner.

This made for a great combination. The SGC tuner had no problem at all producing an acceptable SWR on 80-20M (we did not try 15 or 10). We didn't waste any time or battery capacity fiddling with a transmatch. This also permitted our less-experienced hams to easily switch bands without fiddling with a manual antenna tuner. We made 479 contacts with the antenna, most of them at 50W CW, so it seems to have put out a great signal.

#
Last update June 28 1994
#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. For fidonet addresses I have
used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
(note address numbers in reverse order).
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-M[-D] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987, 1992 CAN or 1993 US). ? after means
recheck may be required (eg. Call does not match name).
#
This list has a life of it's own, so references to *my* list will be ignored.
#

4670. Amps - Pounds relationship

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-28 15:34:39 UTC
From: mwhite@mitre.org
Message-ID: <mwhite-280694105956@m14494-mac.mitre.org>
Source record: 264381

While reading a recent ad for a well-known power supply company, I noticed an interesting relationship between the maximum current rating of the supply and the shipping weight; they seemed almost equal. The linear regression of the 42 data points (different power supply models) from the ad is:

Weight(in lbs) = (.832 * Current(in amps)) + 3.52

The coorelation coefficient is .96, so the fit is pretty close. So, if you're buying a power supply, you can guess that the shipping weight in pounds is about equal to the maximum current rating times 0.8. Ain't science grand?

Here's a hypothetical (maybe not!) question about contest operations for some solicited discussion --

Wanting to participate in FD or another contest and not having a station set up at home, I arrange with a ham friend to use his station -- rigs, tower, beams, power supply, etc. For the duration of the contest, I operate from his QTH, sleep on the couch and eat my meals from his 'frigerator (he is REALLY a nice guy!) I rack up the contacts and have a great time .... using MY callsign, not his. Question: should HIS call, not MINE be used; should the call be MINE/HIS or HIS/MINE; or does it really matter? (Afterall, when the contest scores are published in QST is it the OPERATOR or STATION that gets the recognition?)
Is this a question of propriety or legality?

Bob, WB5FBS

: wiring. A related question would be suggestions as to the circuitry that
: would allow a radar detector alarm to break into the earphones even while
: having a QSO.

: Thanks much for any information,

: Steve

It was an issue which came out this spring. I was enthused to see it until I
read it.
One of the highest rated devices was an "in the ear mike/earphone" rig.
I own one of those and borrowed another. USELESS!
They are VERY sensitive and pick up every bit of noise, wind, engine, gear
shifts, passing trucks, ect., and I ride a quiet motorcycle.
I used it in a resturant and the person I was communicating with said he
could hear conversations elsewhere in the resturant comming over the
air while I talked!

I have found something which does work, a new throat mike rig from an outfit
called Genisys (sp?). It picks up ZERO noise. It's high freq. response is
limited, but it gets good reports from people I talk to. They often express
suprise when I mention that I am motorcycle mobile. It has an attached
earphone which fits well in the ear.
I still think I would prefer a speaker or built in helmet phones, just for
conveinience.

Post if you find any other useful motorcycling/radio goodies.

By the end of Field Day even the non-frustrated tend to hear code
everywhere.

4677. Re: Mobile HF Noise Problem

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-28 16:58:24 UTC
From: turner@safety.ICS.UCI.EDU
Message-ID: <9406280958.aa08399@paris.ics.uci.edu>
Source record: 264388

Hi Gary:

I am not an HF mobile expert, but have done a bit with radios that did not have noise blankers. I will just tell you what did help me to reduce the "hash" I got from the car. (I never really faced the standard ignition noise, the fast "cracking" noises.)

I found that, magically, a very short lead from the body ground to my rig helped, even with direct connections to the ground lead of the battery and at the antenna. The difference was amazing. (Of course, you probably have already done this :-).

I have a friend with a Volvo that has an electronic fuel pump in the back of the car (near the antenna), and who found that to be the major contributor to noise. He did some bypassing of the lines there and cured the problem.

I have had friends use coax to replace their spark plug wires, or use braided shield to run over the car spark plug wires, and to otherwise shield the auto electronics boxes. They claim some improvement. I suspect you could reposition the mag mount for your HF antenna and see if you can "locate" the noise in general.

Best of luck. I like to mobile, too.

I have the original KAM, and have been _very_ pleased with both it and the
helpful service I've gotten from Kantronics. If you ever have to give them
a call, you'll find them pleasant to deal with. Gotta upgrade to the Plus
soon.

I am looking to update the mods directory on Oakland.

If you have, or know of, a mod for a current radio (i.e. Yaesu FT416)
please e-mail them to me.

Let's not let the Oakland mods collection fall behind!

P.S. I'm still looking for any mods for the Icom IC-3SAT 220 HT.

Thanks much in advance!

73,
Scott

I have a Comet CH-72S, it is much better than the duck I got with my IC24at.
But it seams to work about the same as the one I got with my FT-530(Yaesu).

The one bad thing about the Comet is that it is 15inces long. They say
size doesn't matter, but it sure does make it difficult to put in the
glove box with out bending. :)

4683. CCP SRC-10 Controllers

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-28 18:22:41 UTC
From: newman@alantec.com
Message-ID: <newman.772827761@irvin.alantec.com>
Source record: 264392

A friend and fellow Ham has a group of repeaters here in the Bay Area. He has been using Creative Control Products SRC-10 controllers with good success. Unfortunately it appears as if CCP has gone out of business. They *don't* owe him money but he'd like to get access to some additional units, spare parts, bare boards, SW, etc. for long term support of his system.

The last address he has for CCP is in Grand Junction, Colorado but they aren't answering mail and the phone is disconnected. He contacted '73 Magazine (where they used to run ads) and was told the owner "chose to get out of the Ham business". (I can't imagine why?)

So any information about the company or SRC-10 designs would be appreciated.

>Post if you find any other useful motorcycling/radio goodies.

I've used the headsets and mic element used in the NADY
motocycling intercoms successfully for years. I don't find the
ear buds stay in all that well, but the little speaker units for
the open face helmets work decently. I usually modify them to
remove the boom, although that works fine, and use the microphone
from the full face version - essentially creating a hybrid with the
open face speaker box and the full face mike unit, and rewire the
cord so it plugs directly into the control box from my ICOM style
HT (mine is actually an alinco dj580, but the hs-10 box works fine
with it). The most important thing is to turn the gain on the mic
way down, barely off the peg. I get very good comments on the
sound ("quieter than your car") and I can hear well. I usually use a
pair of foam earplugs to reduce the helmet noise anyway and save
the hearing, and the little speaker can drive hard enough to be heard
well above those with the shield up.

Last I looked you could get the replacement speaker/mic sets for the
NADY intercoms in the Dennis Kirk catalog for about $20/each.

Hope this is useful to you. And remember, traffic is a non-maskable
interrupt! :-)

4685. FIELD DAY 1994 REPORT

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-28 19:46:07 UTC
From: jmaynard@nyx10.cs.du.edu
Message-ID: <2upulv$fis@nyx10.cs.du.edu>
Source record: 264395

I'm gonna follow WA3NNA's format; it's a good one.

CALL: K5ZC

ENTRY CLASS: 1A Commercial - club group

SECTION / LOCATION: STX
On Lake Livingston, about halfway between Livingston
and Onalaska, Texas.

RIG: ICOM IC-720, ICOM IC-740 (at different times)

ANTENNA: 70' horizontal dipole, in the trees, tuned with an MFJ-941D Versa
Tuner II.

POWER SOURCE: Commercial mains.

TOTAL ON-AIR OPERATION TIME: Approximately 5 hours

FINAL SCORE:
1 QSO on 10
23 QSOs on 15
16 QSOs on 20
5 QSOs on 40
1 QSO on 75
----
46 TOTAL QSOs (x2) 100 watts = 88 points

COMMENTS:
The dipole didn't get out worth beans. It would tune up just fine, but
if they weren't REALLY strong, we couldn't work them. We're primarily a CW
group, but we only brought one keyer - and my Micromatic died before the start
of the contest period. $#&%@^#$&%@$% We're not a really competitive group
anyway, and that sealed it. Besides, we did get to spend a fair amount of time
driving WD5IYT's boat around the lake... VE3SY's FD logger works reasonably
well, though the user interface could use some work, and it didn't deal with
DOS 6 (or, just now, OS/2) well at all - but, since it was written in 1989, I
suppose I can excuse that.

LESSONS LEARNED:
Bring at least TWO CW sending devices; your favorite keyer may not
survive the first test. (#$^%@#$^$%&*$^!!)
Sunblock.
Try trimming the dipole next time.
Try real hard not to kick the water ski when falling out of it.

LINDSETH@PLAINS.NODAK.E wrote:

I have lost my handheld antenna for the second time. I would
like to know which short duck antenna has would perform the best
with my Alinco 580. I have heard that the one Larson makes is
pretty good. I have also heard that the factory supplied antenna
is pretty much a dummy load.

I strongly recommend a Larson "Kool-Ducky". I use one on my TH-78 rather
than the stock dummy load. I ran some comparison tests and found better
receive and transmit performance with the Larson antenna. Test methodology
was to get into a fringe area with the stock antenna, then switch to the
Kool-Ducky. Fringe became full quieting every time. :-)

The Kool-Ducky has more capture area than the stock dummy load on either
the TH-78 or the FT-530. I have not seen the stock antenna on the Alinco,
but I expect the same results.

As to loosing the antenna, are you clipping the HT to your belt and wearing
a fanny pack that rubs the connector? I found I was loosening the BNC when
I swing the fanny pack around to get out my wallet/keys/etc., then dropping
the antenna as I walked.

I just received my novice license, and after hearing the people on the novice bands, I feel like a Model T trying to merge onto a freeway. Somehow, Morse code is just not sinking in. I have been told that the best way to learn is to just get on the air, but everyone I hear is too fast.

If anyone else is in the same boat I am, perhaps we can set up a time and frequency to practice code. I have an HF radio with antenna for 40, 20 and 10 meter bands. I live in the Los Angeles area.

I live in West Linn but moved from Columbus, Ohio about ten years ago. I've
made 3 trips to Columbus this year and am always pleased to operate in the
almost totally open vhf/uhf operating envirionment there.
More than half of the local repeaters have autopatches. I wrote leters to
the station trustees of all the 2m repeaters listed in the ARRL repeater
directory for which I found a valid address.
I asked if I might possibly obtain the "secret codes" for their autopatch
for use while I visited the area.

I got the same answer from all who replied:
Secret codes? What secret codes? Use # to bring up the patch and * to bring
it down. Enjoy your visit!

They have enabled a great many of the advanced controller features we only
dream about in PDX.
Such as:
paging, mail box/voice mail, reverse patch,
And troubleshooting tools such as:
The ability to cause a short transmission to be recorded, then played back
to listen to your own signal, DTMF tone testing, deviation testing, etc.

Maybe someday....

Robert G. Priez (FMUS1184@VEGA.SELU.EDU) wrote:

: Here's a hypothetical (maybe not!) question about contest operations for some
: solicited discussion --

FYI - for those interested in contesting, there is an excellent "reflector"
mailing list with somewhere over 500 subscribers currently. You can
subscribe by sending an email message to:

cq-contest-request@tgv.com

In the text/message area, simply enter ONLY the following: subscribe

: Question: should HIS call, not MINE be used; should the
: call be MINE/HIS or HIS/MINE; or does it really matter? (Afterall, when the
: contest scores are published in QST is it the OPERATOR or STATION that gets
: the recognition?)
: Is this a question of propriety or legality?

Depends on the rules/regulations of the contest and the country from which
you are operating. Here in the USA, you may legally operate from another
ham's station and use your own callsign .... you then become responsible
as the control operator. There are legal niceties involved, but suffice
to say, it is both common and legal (in the USA) to do so. As an
example, if you are an Extra class licensee and using a Novice station
license you are required (as I recall) to stay within the privileges for
that class of licensee. For contests, I have used either my own call at
another's QTH, or on occasion I have used the other fellow's call but
have been listed in the published contest results as the operator. Check
CQ and QST and you will see lots of examples of this.

In some other countries, you must use only your own call sign (eg. Japan)
unless you are using a "club station" in order to stay within the rules
and regulations of the licensing authority.

Cheers de,
Sandy

Sure, why not join in and brag a bit...

FIELD DAY 1994

CALL : NN7N (+N7HLD)

ENTRY CLASS : 2A - generators, 10 operators

SECTION / LOCATION : WWA
Lake Stevens, Washington

RIGS: Kenwood TS-950
ICOM 735
Yaesu FT-736R (VHF/Satellite)
Kenwood TS-460 (Novice/Satellite)
ICOM dual band rig for packet.

ANTENNAS: HyGain TH-6 on 35 foot tower.
2 element wire delta loop beam up 60 feet (between 2 trees)
80 meter dipole up 50 feet.
6 el beam on 6m
10 el beam on 2m
dipole on 10m (for Novices)

POWER SOURCE : Honda 1600W generator

TOTAL ON-AIR OPERATION TIME : Full 24 hours

FINAL SCORE:
Band CW QSO SSB QSO
80 48 107
40 271 64
20 294 308
15 68 21
10 0 17
6 1 27
2 1 7
NOV 0 20
SAT 5 2
PKT 1 0
-----
689 + 573 = 1262 Total QSOs
689 CW X 2 (CW) X 2 (<150W) = 2756 CW points
573 SSBX 1 (ssb)X 1 (<150W) = 1146 SSBpoints

3902 total points
+ 800 bonus points (Emergency pwr, SM msg, W1AW

msg, Satellite, Nat pwr, Packet,VHF/UHF)

4702 score (subject to further checking)

COMMENTS :
Conditions in general seemed better than for the last couple of years. 20 was the workhorse band, but 40 CW was plenty active, and the wire beam helped there. Unlike last year there was a good amount of Sporadic E propagation on 10 and 6. Tried RS-10 for the first time, and finally got the hang of it by the last couple of passes in the wee hours of Sunday morning. Our highest score in 5 years, but consumed the least amount of beer ever. Is there a correlation? ;-)

Big question in our minds: how did we fare against the "contest madmen" at W7FR, also 2A in WWA?

LESSONS LEARNED:

Use real rope to pull up heavy wire antennas. Nylon twine is strong enough, but it stretches too much and is too hard on the hands to really tighten up. Put up a better 15m or 20m antenna for our second station to use during the day. We were able to load up the 80 m dipole on 15, but it was hard being heard.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 28/2330Z JUNE 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 28 JUNE AND FORECAST UP TO 1 JULY

IPS Disturbance Warning 17 was issued on 22 June and is current for
interval 24 June to 4 July

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 074/011

GOES satellite data for 27 June
Daily Proton Fluence >1 MeV: 3.6E+05
Daily Proton Fluence >10 MeV: 1.4E+04
Daily Electron Fluence >2 MeV: 5.8E+06
X-ray background: A5.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
29 June 30 June 01 July
Activity Very low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 075/013

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 27 June
Learmonth 10 3232 2---
Fredericksburg 10 19
Planetary 10 23

Observed Kp for 27 June: 6452 3323

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
29 Jun 12 Unsettled.
30 Jun 12 Unsettled.

01 Jul 12 Unsettled.

2C. MAGNETIC COMMENT
Coronal hole related geomagnetic activity appears to have ceased. Expect
any future activity to occur during local night hours.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
28 Jun normal fair fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
29 Jun normal normal fair
30 Jun normal normal fair
01 Jul normal normal fair
3C. GLOBAL HF PROPAGATION COMMENT
Due to magnetic activity declining HF conditions should improve.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were about 15% below predicted monthly values

Observed T index for 28 June: 15

Predicted Monthly T Index for June is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
29 Jun 25 Near predicted monthly values.
30 Jun 25 Near predicted monthly values.
01 Jul 25 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Spread F observed during local night. Geomagnetic activity appears to
have ceased so HF comms conditions should improve, some degradation still
possible during local night.

10-98: assignment completed
11-24: abandoned vehicle
11-25: traffic hazard
11-26: abandoned or found bicycle
11-54: suspicious vehicle
11-79: vehicle accident, ambulance dispatched
11-80: vehicle accident, injuriy/s, no ambulance dispatched
11-81: vehicle accident, minor injury/s
11-82: vehicle accident, property damage only, no injury/s
11-83: vehicle accident, unknown type
11-84: traffic control
11-85: towtruck request
"rotation tow" is next available towing company
11-95: vehicle stop, normal violation
11-96: vehicle stop, assistance needed, send code 3 fill unit/s
11-99: officer needs help, major emergency

148 : resisting arrest
187 : possible murder victim / suspect
207 : kidnapping
211 : robbery, A armed, PS purse snatch, STRONG ARM handgun or struggle inv.
220 : assault with intent to commit felony sex crime/s (report)
240 : assault
241 : assault on an officer
242 : battery
(240,242 often said together as "24242" for assault and battery)
243 : battery on an officer
245 : assault with a deadly weapon
246 : shooting into occupied vehicle or dwelling (apartment, house)
261 : rape, 261.5 illegal intercourse
273 : abuse, A child abuse, child beating, 273.5 spouse beating
277 : child stealing (inter-family type)
288 : sex offenses
300 : under jurisdiction, WI juvenile court
314 : indecent exposure (flasher and 17�s neighbor)
415 : disturbance (fight, gang, argument, loud noise / music, party)
417 : brandishing a weapon
451 : arson
459 : burgulary
470 : forgery
476A: bad checks
484 : theft, GAS gas and run
487 : grand theft, this includes any item worth over $1000
488 : petty theft
496 : receiving / possession of stolen property
499B: joyriding

518 : extortion
537 : defrauding an innkeeper
594 : malicious mischeif (gang activity, vandalism)
597 : cruelty to animals
601 : uncontrollable person, J / WI juvenile, T truant
602 : PC trespassing, WI juvenile violation of court order/s
647 : A lewd conduct, B prostitution, F drunk in public
653 : obscenity or harassment, M phone calls
904 : fire (specify type)
911 : 911 call
UNKNOWN unknown type or reason
HANGUP hangup on receipt
952 : report on conditions
956 : detail unfinished but available
3056 : parole violation
4000 : expiration, A registration
4532 : escape
5150 : mentally disturbed person
10751 : altered VIN # (vehicle identification #)
10851 : stolen vehicle, R recovered
10852 : tampering with vehicle
11300 : narcotics
11350 : possession of a controlled substance
11357 : possession of marijuana
11550 : drugs / narcotics (under the influence of)
12020 : illegal weapons, possession of
12025 : carrying a concealed weapon
12500 : unlicensed driver
14601 : driving with a suspended driver's license
20001 : hit and run, felony
20002 : hit and run, misdemeanor
22350 : speeding
22500 : parking violations
22507 : handicap parking violations
23103 : reckless driving (with direction of travel)
23109 : speed contest
23110 : throwing objects at vehicle
23152 : misdemeanor DUI, alcohol or drugs
23153 : felony DUI, alcohol or drugs
25662 : minor in possession of alcohol, BP in public

uppal@cup.hp.com (Sanjay Uppal) writes:

>
> I thought initially that the DTMF Paging feature was a useful one.
>
IMHO, and you can precede everything I say with that, the paging function is only useful if you know you're in a situation that warrants it, such as volunteer event communications or sometime when you're expecting a call on a crowded frequency. I don't use it because it's too restrictive for me. I enjoy listening in and responding occasionally to all conversations. If a paging function allowed the use of subtones to cause an alert beep, or a data burst in the case of some radios, then normal comms could be used in the interim. Besides, I do listen for my call sign when the radio is on.

> 1. The alternate to getting paged is either sitting glued to your
> handie, or setting up some time aforehand for a QSO. If you

All of my HTs came with a wall charger that can provide enough power to keep the battery topped off during a long listening session. I also bought a quick charger for each, and extra batteries, but that was for my ARES service, not just to have a spare. One need not stay glued to the radio, though you should be nearby when the page does come in. If I have page enabled, I can't hear what's going on so I don't know if I'm stepping on another QSO in progress. Again, these are only my views and should be taken with lots of salt.
>
> 2. The two repeaters I have tried do not pass DTMF codes. So while

You'll find that any repeater that is intelligent or has an autopatch will not pass tones. This is to protect the somewhat secret combination needed for those repeaters. Here in San Diego, I think there are only three or four 144MHz repeaters that are "dumb" and can pass tones, and I can only get into one or two at a time in any one location with an HT. I don't think there are any 220 or 440MHZ machines that pass tones, in San Diego anyway.
>
> So how do you folks use DTMF page ? Do you find it useful ?

As you can tell, I don't use paging. We (ARES) tried it at one community event, but because our comms are intended to be two-way, meaning a remote station may need to call NCS, paging can't work effectively.

I guess that, in certain situations, paging could be useful, but because paging is slightly different for each radio (none of mine can page another), all parties involved need to have the same radio, at least the

same brand.

Good luck with your experiments. I will not condemn nor condone paging,
but I will refrain from using it.

If, by "Bay Area" you mean San Francisco Bay Area, I frequently visit
friends and relatives in the Livermore Valley and use the Mt. Daiblo
147.21 machine. Hope to hear you next time I'm up.

4706. Re: Mobile HF Noise Problem

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-28 23:58:50 UTC
From: battin@cyclops.iucf.indiana.edu
Message-ID: <Cs4tA3.5C5@usenet.ucs.indiana.edu>
Source record: 264413

You might check to see if the exhaust system is well bonded to ground,
all along its length. This is a common area of poor connection that can
generate noise in mobile installations, since exhaust pipes are generally
mounted on rubber holders and can corrode at joints. A static check of
continuity might not reveal a problem, since there might be a poor connection
along the exhaust pipe that won't show up until the system is vibrated
by driving the vehicle. So, the solution to this, if it _is_ the problem,
is to solder jumpers to all sections of the exhaust system, and then to ground.

Also, I have read that tires can generate a static charge as they roll on
the highway, which might lead to some noise. I don't know if this is really
a source that could cause enough interference to communications to worry
about. I have never noticed anything like it, myself.

Hello all! I have only recently received my no-code tech license.
I am currently working on learning code.

I have a strong interest in propagation and am specifically interested in
finding source code/articles/books related to HF propagation prediction.

I am mostly interested in the formulas and the algorithms as I would like
to write my own simplified propagation prediction software.

Thanks in advance for any and all help in this matter.

I just received my battery and charger from W & W Associates, and I've got mixed reactions after testing them.

The charger (Mastercharger I) is excellent! It seems to do all the right things, and it charges my Yaesu FNB-25 in about 30 minutes. It's based on the Phillips TEA1100 battery charger controller IC, which seems to be a smart piece of work. It's a true Delta-V charger with both fast charge and trickle states.

The Mastercharger I is $85, comes with a 15vdc 1A power pack, and can run on unregulated 12v as well. It charges any nicad pack from 6 to 13 volts. You get to pick one drop-in adapter cup with the charger and extras (for other kinds of batteries) are $16, but they would be a pain to switch (4 screws). I mounted a new external connector on mine, and run my own leads out to all kinds of other batteries. So far, no complaints.

I also bought one of their extended FNB-27(S) 12v 800mah batteries, but I can't say much good about it. It does have the standard micro phono charge input connector, unlike some other 3rd party batteries, but I will probably never use that anyway.

The physical fit is inferior to the Yaesu batteries. It's a bit snug in the radio, and the seams just don't line up nicely. I am being picky here, but if I had my pick, I would prefer the Yaesu case.

Also, the 800mah rating is a bit generous, if not deceitful. I put a fixed 117 ohm load on it and recorded the voltage over several hours. It went from full resting charge (13v) down to 5.5v over a period of 419 minutes. The curve shape was normal for a new nicad pack (12.0v at 352 minutes, downhill from there.)

My question is HOW do they rate the mAh of a battery? I called W&W and they said that they don't at all. They just copy the "800 mah" rating that Sanyo gives them on the cells. I'm not impressed.

If I take each measurement sample (1/2 second steps), measure the voltage, compute the current based on 117 ohms, and multiply the amps, volts, and fraction of an hour, I get a sum total of 8.88205 VAhr under the curve (before it drops to 5.5v). I use 5.5v because that's where my FT-530 shuts itself off. I consider the battery dead before then.

Dividing by 8.88205 VAhr by 12.0v gives a total of .7402 Ah, which is less than the rated 800 mAh. In reality, I would say "much less", since the battery is probably useless for transmitting as soon as it can't support a load. (117 ohms isn't much of a load.)

Compare this to the Yaesu FNB-25 (7.2v 600 mah). It ran for 626 minutes before dropping to 5.5v (lower voltage, less current). Using the same area-under-curve computations, I get 4.882 VAhr, which is 678 mah at 7.2v. This is what I might expect from a new battery pack.

So, when they rate "mah", do they count every last morsel of electricity, right down to 0v? I don't think there's much there to count, but I certainly don't intend to reverse-charge any cells by running them that far down.

I have some PostScript plots of the discharge curves, if there's any interest. It's really remarkable to see the sharp knee of nicad death. Even more interesting is the discharge plot for an old "worn out" 7.2v battery. It takes a 1.2v dive very early in the discharge cycle, probably due to one weak cell. That cell is then reverse-charging for the rest of the discharge, which probably does wonders for it's degradation. Each cell then dies in turn, with a well-defined 1.2v step down. A new battery has all the steps at about the same time, while old ones seem to space them out. Neat stuff to see!

I'm now wondering if running the 12v pack down to 5.5v isn't somewhat damaging, since many of the cells have long since died and reversed by the time it gets there. I would imagine that the very first cell to go will be the first one to eventually get destroyed by the others. Makes me wish they built in a way to discharge each cell individually for conditioning.

Oh, here's part of a news posting I put up a week ago about W&W and Periphix with the company info in it. Have fun.

Happy Hacking!

----------8<----------8<----- CUT HERE -----8<----------8<----------

I'm expecting a package soon from W & W Associates, who also sell Ni-Cad packs and custom chargers. I wanted to shop Periphex, but they took two months to send me a catalog, and their prices aren't as good. Now that I have it, I'm surprised to see that they only resell Yaesu standard chargers, not their own. (NC-42 for $99) I'm not impressed, but I'm only looking at Yaesu stuff right now, so other brands may be better served. Their max batteries for the FT-530 are 7.2v 1400mah and 12v 800mah, each listed at $65.

W&W has a promising gizmo they call the Mastercharger I, which is some kind of smart ("Phillips Microprocessor") high-speed Delta-V charger good for any Ni-Cad from 6 to 13.2 volts. It takes adapter "cups" to charge most types of HT batteries, but extras cost $16 each. I intend to make my own (unusual) wiring adapters since it looks like the charger output plug is pretty standard. The charger with one cup is $85. Cigarette-lighter power cord is $10. (I don't know if it does more than just pass 12v power, since the charger can do 13.2v batteries.)

They had 12v 800mah and 7.2v 1500mah oversized batteries for my FT-530, each $49, which seems to be an excellent price.

I haven't received anything yet, so I can't comment on how well they meet their advertised spec, or how nice the charger is.

Doesn't anyone read the Regs anymore?

97.19(c) When the licensee has submitted a timely application for renewal of an unexpired license (between 60 and 90 days prior to the end of the license term is recommended), the licensee may continue to operate until the disposition of the application has been determined.

In other words, you may continue to operate until you eventually receive your renewed license =OR= until you are notified by the FCC that it was not renewed.

Actually, the two ICOMs were radios #2 and 3. #1 was a Yaesu FT-107M; it would have worked fine on CW, but was found to have a dead mic amplifier (most likely). Nyah.

Next year, I bring a straight key, as well as a (working) Micromatic.

James,
Try to telnet "callsign.cs.buffalo.edu 2000". You can search by call or
name or city or state or zip. For example:

city Dallas

would show all hams in Dallas. Type "quit" to disconnect.

Good luck!

NOTE: The Effective Sunspot Number for 27 JUN 94 was 31.3.
The Full Kp Indices for 27 JUN 94 are: 6- 4o 5- 2+ 3- 3- 2- 3-
The 3-Hr Ap Indices for 27 JUN 94 are: 66 26 41 10 12 11 7 12
Greater than 2 MeV Electron Fluence for 28 JUN is: 2.8E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low. Newly assigned Region 7743
(S09E67) rotated into view, just aft of Region 7742 (S08E54)
which came on yesterday. Region 7742 is the more complex of the
pair, with a weak delta observed in the leader spots. No flare
activity has occurred as yet.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field was quiet to unsettled at middle latitudes. High latitudes were slightly more disturbed. It now appears the recurrent disturbance was much shorter than anticipated. The greater than 2 MeV electrons were at moderate to high levels.

Geophysical activity forecast: the geomagnetic field is expected to be predominantly unsettled throughout the period. Active conditions are likely during local nighttime hours.

Event probabilities 29 jun-01 jul

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 29 jun-01 jul

A. Middle Latitudes
Active 50/50/50
Minor Storm 20/20/20
Major-Severe Storm 05/05/05

B. High Latitudes
Active 55/55/55
Minor Storm 25/20/20
Major-Severe Storm 15/10/10

HF propagation conditions were near-normal from the equatorial to middle latitudes, and near-normal to below-normal over the high and polar latitude regions. Periods of minor signal degradation affected transpolar and transauroral circuits as a result of enhanced geomagnetic and auroral activity, but no significant degradation occurred.

In article <mwhite-280694105956@m14494-mac.mitre.org| mwhite@mitre.org (Michael White) writes:
|While reading a recent ad for a well-known power supply company, I noticed
|an interesting relationship between the maximum current rating of the
|supply and the shipping weight; they seemed almost equal. The linear
|regression of the 42 data points (different power supply models) from the
|ad is:
|
|Weight(in lbs) = (.832 * Current(in amps)) + 3.52
|
|The coorelation coefficient is .96, so the fit is pretty close. So, if
|you're buying a power supply, you can guess that the shipping weight in
|pounds is about equal to the maximum current rating times 0.8. Ain't
|science grand?

I've been working on a similar analysis of the output of the biggest
power supply the company makes vs. the length of the company's name, but
I've been holding back the results for fear that some upstart company
named Wizzenonthethirdrail or something will start selling a 0.1 amp supply.

There is a big, classical design error.

Just why do certain radio manufacturers provide + and - leads both fused and tell people to wire both back to the battery ? Beats me! With the ground of your antenna you create a wonderful, classical ground-loop involving the battery and the engine compartment. Using a direct radio-body ground doesn't remove the loop but it does reduce it and keep it out of the noisiest areas.

Make sure that the battery to body connection is huge, clean, short and secure and you have no need of that - lead.

You need a good short wide, low inductance strap from the radio's chassis to the car body. Take the + lead into the engine compartment, keep it as clear as reasonably possible of other cables to the battery + you may want to put a few turns of the +lead (only) round a ferrite toroid (Fair-rite #43) close to the radio.

The theory that someone used was that the separate ground lead would remove any noise voltages dropped across the battery ground lead, and assumed that the battery looks like a monster, perfect capacitor. They neglected the existance of other grounds. Sure, local grounding is also theoretically imperfect, but usually turns out to be a lot quieter.

The fuse in the - lead, I thought you'd never ask ! if you wire the radio - direct to the battery, and the main battery - lead fails, the starting current could try to pass from the car structure, via the antenna cable, radio and radio - cable to the battery. The fuse is to prevent fire. I've seen a throttle cable burst into flame on a car where a mechanic had forgotten to reattach the engine ground strap.

Hope this helps a bit,
David GM4ZNX

Making your own is probably the easiest way. The formula is:

C = (5 / 9)*(F - 32)

or...

(C - 40) = (5 / 9)*(F - 40)

Both work--it just depends on which is easier to remember...

If you're in line of site of and in the path (direct or 'knife edge
refraction from a mountain as was in Leukemia Valley in Northern NJ)
then you can be in serious trouble. Generally the beam width is small and
as long as the antenna is high enough over head it probably isn't saturating
anything below.

From: georgec@onramp.net
Message-ID: <2urq4a$s5h@news.onramp.net>
Source record: 264335

So, HF mobile elmers, what should I do to reduce this noise? I'm sure there are tons more stations to hear and work....

Had a similar problem on a Pontiac. Wound up buying a shield kit for the ignition wires at PEP Boys. This puts braid-shielded wires in and a metal distributor cover. Made a +20db to s7 improvement, which the FT-757 blanker could handle.

I have a TS-50 with hamsticks, and in my opinion the only weak point in the ts-50 is the noise blanker, they need ft-757 lessons at kenwood. My present car is very clean noise-wise, but the '50's blanker does NOTHING about power line noise.

Good luck!

> would they do that if the antenna truly should not be used with a
> tuner???

First, you said you had TVI, one indicator that something was wrong,
possible antenna defect, maybe.

Second, lowest SWR of 2:1 on some bands? It really sounds like there
may have been some problems w/the antenna, feed or both. Also, there
is an adjustment on the small loop inside the dumbell housing. The
proximity of the small loop to the bigger loop (yes, there is an
andjustment for that) is set at the factory but in some installations
it may be necessary to move the feed loop closer/farther from the outer
loop. Did you do this? This always corrects the SWR problem. I suspect
that you never had the antenna to true resonance. A local ham here in
Maryland adjusted his antenna thusly and commented on the improvement
that made. I had no such problem w/my attic installation.

Regarding the tuner that AEA sells for the antenna; It's an automatic
microprocessor controlled unit intended to make moving up and down
the band very quick, w/memories and all. It has NO TUNING
CAPACITORS. As the manual states an antenna tuner will not tune the
loop to resonance. Again, the point is the antenna must be resonant. That's
the virtue of the design...

If you're trying to compare the performance to a tribander or full size
dipole in 'free space', you've missed the point. Another ham here in
Maryland sold his Isoloop in disgust after he mounted it on top of
his tribander on a 40 ft tower. Why waste money/time if you have other
alternatives. You get this antenna when you have restrictions and no
other alternative.

FYI, read the May 1994 issue of QST for an ARRL review of a homemade loop.
They got the same results I did running QRP (5 watts) on 30 Meters...

It isn't unusual for HF amateur transceivers radios to tune in 25 Hz or
smaller steps these days, though I don't know the number for each of
the radios out there.

: Actually this radio changes the digital display in only 10 khz steps.

It isn't unusual for radios to tune in finer steps than they display.

: Is there a DSP algorithm that could be used to render intelligible speech
: from the mistuned signals?

Yes there is, though it depends how the signal is mistuned. If you
re-insert the carrier in the middle of a voice signal, two different
input frequencies get translated to the same output frequency. My
guess is that this requires a much more sophisticated algorithm that
knows something about speech characteristics than one that say, just
shifts frequencies down by 1 kHz.

From: n2ayj@n2ayj.overleaf.com
Message-ID: <772902174.13snx@n2ayj.overleaf.com>
Source record: 264249

The ARRL runs regular code practice on W1AW, and I have heard some local repreaters run practice sessions as well. W1AW skeds are published periodically (npi) in "QST".

The New Jersey Slow Net (NJSN) for years has taught traffic handling at slow speed, which improved both traffic handling and code skills. The net makes good listening for SWL ham wannabes, as well as Novices. Perhaps there is one on a frequency near you. See if you can get hold of a League NET DIRECTORY, which lists nets in the National Traffic System, et al.

4738. HF Mobile Noise Problem (Part 2)

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-29 15:25:12 UTC
From: gb@dixie.cs.unc.edu
Message-ID: <GB.94Jun29152512@dixie.cs.unc.edu>
Source record: 264365

Thanks for the tips many of you have sent. I've done some more experiments and have gotten some encouraging results. Possibly this will help someone else.

For those coming in late, the quick summary is that I had S7 noise in my TS-50 with 20 meter HamStick antenna when my Plymouth Acclaim engine was running. No noise with the engine off. No alternator whine, just high-rate popping that varied with engine speed.

I made a little "sniffer" from a single turn 4 inch diameter loop of hookup wire at the end of a length of coax. With this I determined that the noise was only audible when the sniffer was pretty close to the ignition wires. No noise was audible with the loop back at the rear of the car (near the antenna), even with the sniffer ground connected to the auto ground (seems to me that this rules out a ground loop problem but maybe I misunderstand). No noise was detected when the sniffer was placed directly in contact with the power leads to the radio.

Someone suggested shielding the sparkplug wires and distributor. In fact, PEP Boys (an auto parts chain store) sells a kit for $19.95 to do just this. Being really cheap, and not wanting to spend $20 on an experiment, I (at the suggestion of a colleague) devised a simple, quick, and cheap experiment.

I wrapped my sparkplug wires, distributor, and high-voltage coil in aluminum foil. It's all nice and shiny in there now :-) I wouldn't do this for a permanent installation, mind you, just for an experiment.

The result was a 3 S-unit reduction in noise (hard to be sure, it could be more, it is pretty noisy on 20 meters right now). This reduces my noise level from S7+ to S4-. I think there is still some noise but it is different in character from the ignition noise I was experiencing without the foil. I'll have to wait until 20 meters is quiet to be sure about the current noise level. Maybe I'll get to put some of those suggestions about other sources of noise to good use...

For a permanent installation I think I might try 3M Copper Foil Tape. I've got several rolls that I picked up at a hamfest for $0.25/each. I think, I'll try wrapping the plug wires and covering the surface of the little plastic piece that surrounds my distributor with this tape and see what happens.

By the way, I tried the foil both grounded and ungrounded. It didn't seem to matter.

So, if you're experiencing noise that might be capacitively coupled from your ignition system, try an experiment with aluminum foil.

Again, thanks for all the suggestions.

Along the same vein...
A few months ago, the hider in our local T-hunt loaded up an old telegraph line that ran about 3 miles on 2m. It was a (untranmittable word) to find!

All sorts of hot and dead spots. The only consistancy was that the signal was hot under the line. The T was hidden in a fake, but official-looking utility box buried in the ground, with the feed going up an old disconnected ground wire. A strong contender for "Hide of the Year"!

BTW, this was billed as a _beginner_ hunt :-)

Easy: just buy a thermometer with both scales on it!

Okay. You can use the following:

Temperature Conversions -- Fahrenheit Celsius

Celsius (centigrade) to Fahrenheit/ 212 100
Fahrenheit to Celsius 122 50
113 45
F=degrees in Fahrenheit 104 40
C=degrees in Celsius 98.6 37
95 35
F=(9/5 x C) + 32 86 30
77 25
C=(F - 32) x 5/9 68 20
59 15
9/5 = 1.8 50 10
41 5
5/9 = .555 32 0
23 -5
14 -10
5 -15
-4 -20
-13 -25

>I have a Larsen NMO mag mount and the plastic on the bottom is ripped. The
>magnet has started scratching the car paint.

>Suggestions of what to use to replace the plastic would be appreciated.

Sure :-)

1. Carefully unscrew the antenna from the magnet base.
2. With sharp diagonal cutters cut off the coax as close to
the magnet as possible: save for later use.
3. With either the correct size hole saw or a hole punch (punch
requires pulling down the headliner), put a properly sized
hole in the middle of your roof (you can use the scratch marks
from previous use of mag mount as a guide).
4. Attach salvaged coax (or use new) to a Larsen NMO roof mount.
Guide coax through nearby roof channel to radio location.
5. Insert Larsen NMO roof mount in hole in roof and tighten.
6. Carefully screw antenna onto the neatly mounted NMO in rooftop.
7. Enjoy radio and antenna without any more worry about base of
mount scratching paint, mount blowing off of roof, or branches
knocking your antenna over.
8. Use salvaged magnet to hold 5 1/4 inch computer floppies handy
on the side of the metal filing cabinet closest to computer.
(OKAY, this is just for show to confuse friends; don't do this
with floppies you expect to use again! :-)

Glad to be of assistance :-)

Yes!
One FTP site is:
archive.orst.edu
/pub/mirrors/oak.oakland.edu/simtel20/msdos/hamradio/sm410.zip

I've used the program and it is a great tutorial, although I have not
taken the code test yet.

Good Luck!

By strict legality, the _station_ is licensed, as well as the operator.
You're operating his station, therefore you sign with the station's
callsign.

There's a justification I've heard for using your own callsign: the owner
of the station temporarily transfers ownership of the station to you for
the duration of the contest, which makes it _your_ station, and you're
entitled to use your own callsign. If anybody were to question that sort
of thing carefully, I doubt it would hold up, but I suspect the FCC has
better things to do (like reducing the backlog on new licenses!).

^
>
>Both work--it just depends on which is easier to remember...

There is a typo in the second formula. It should read:

(C - 40) = (5 / 9)*(F + 40)

Although I remember the first formula (and its sibling),
I use the second formula because it will work for C -> F
with minor changes:

(F - 40) = (9 / 5)*(C + 40)

Actually all I remember is:

add 40 to the known temperature
multiply by 5/9 or 9/5
subtract 40

The only tricky part is knowing that F degrees are smaller than C degrees
so you multply by 5/9 to convert to C and 9/5 to convert to F.

I built a 40 meter loop a few years ago. If you want to experiment with this sort of thing, I suggest you get a copy of Ted Hart (W5QJR) book about small high efficiency loop antennas. He came out with the book several years ago. I would guess that he did a lot of the research, experimentation and documentation that AEA (Isoloop) and others are now marketing. The QST article is just a variation of W5QJR's ideas. I didn't read the whole article, but I don't think the importance of low loss in the variable capacitor was stressed. W5QJR went so far as to sell a capacitor that was made out of copper plates with all the parts silver soldered together for low loss.

Well, you want to stop when the cells get to 1.0V each, or 12V
for the pack. Anything after that and you risk cell reversal.

Unfortunately, Ah ratings are done independent of voltage. An
amp of current is an amp of current, so you want to count electrons,
not VAhr which is energy.

Nevertheless, I'm not surprised at your findings, since it is a new
pack. NiCds need to be cycled a couple of times before you get
full capacity. Most people don't bother, since in regular use,
it will get cycled. But, I would be curious to see what your

results would be if you repeated the experiment. Go to 12.0V only, the rest is bad for your cells. Do what you did, but just integrate current over time, and not worry about the terminal voltage as long as it is above 12.0V. I would guess that the second time you'll get more capacity.

Most delta-V chargers undercharge cells. NiCd chemistry is not very friendly to quick charging. Delta-V chargers will charge a cell to about 85 to 90 percent of full charge.
Delta-V chargers stop charging when the charge current starts oxygen production at the positive plate. This causes heating, which in turn reduces the polarization at the positive plate, lowering the terminal voltage, and the triggering delta-V.
To get the last 10 percent of the charge, you need to charge the cell until the terminal voltage reaches 1.6V in order to fully charge the positive plate. Unfortunately, at 1.6V, most of the current is going to produce oxygen at the positive terminal, and if it is done at too high a current, it will cause damage to the cell. So, you need to run the delta-V charger, then trickle charge for a while, say 3 hours at 0.1C or 80 mA in your case. Then test.

I suspect they are using Sanyo KR800-AAE cells. Those are good cells, and will supply their rated capacity if cycled a couple times and charged fully. Most manufacturers rate the cells when charged using the standard method, or 0.1C for 14-16 hours at 20C. NiCd charge efficiency drops off rapidly at higher temperatures.

Good luck and good post.

Yes, uuencoded, it seems. The M character at the beginning is the
encoded line length for a line of full size, so most uuencoded stuff
has each line beginning with M. ------- It is probably garbeled though,
so may not be fully decodable. It probably got there by accident anyway,
and probably has nothing to do with the thread you cite.

I was a little more brain-dead than usual when I typed the above.

It should read:

(C + 40) = (5 / 9)*(F + 40)

I usually type it the "traditional" way:

C = ((F + 40) * (5/9)) - 40

I recommend using tubular copper braiding to cover the spark plug wires,
building a copper cover over the distributor, and then bonding all this
to the block as close as possible to the distributor. I did this on my
1985 Toyota Tercel, and it made the ignition noise, which had been very
bad, almost unnoticable.

John Welch (jjw@seastar.seastar.org) wrote:
: Untill somebody else will do a side-by-side comparison,

I have done just that. My test was similar to yours as I compared the Isoloop to an 80 meter dipole tuned with a Johnson Matchbox to the 20 and 15 meter bands. (The dipole was mounted inverted vee fashion with the apex about 5 feet below the Isoloop, which was on a mast about 50 feet above ground.)

One difference between my test setup and yours is that I used a coax switch so I could do instantaneous comparisons of signals between the two antennas. In several days of testing, I was never able to see a significant difference between them. (Actually, there was one exception to that statement: A station in Calistoga, about 10 miles away, was about an S-unit stronger on the dipole, but I don't consider that a valid test on the 20 meter band.)

: I will
: stand beside the laws of physics that show smaller antenna size will
: mean worse performance, ...

The laws of physics show no such thing. It is theoretically possible for a small loop to be 100% efficient. It's true that it's hard to approach that ideal in practice, but the Isoloop comes impressively close.

As I said before, however, I am not a big Isoloop fan. I still think $300 is a lot to pay for an antenna that performs almost as well as a dipole. But for some situations, it might make sense.

: In short, if an antenna sounds too good to be
: true, it isn't true. There is no snake-oil cure for size.

That criticism might be valid for some antennas on the market (the similarly-named "Isotron" is one that comes to mind), but the Isoloop works as claimed and is a perfectly reasonable antenna to use.

The stock Yaesu duck (YHA28) on my FT470 works well too. About the same as an
Anli dual band duck that I had bought before. The Yaesu's about 8" but the
Anli's about 15" too. FYI, even IN a car they both work much better than an
MFJ dual band mag-mount mobile dummy load on the roof!

Poor Jeff, he was asking for advice on how not to scratch his car paint and ends up with a hole in the roof!

Here is what I did when my mag mount plastic worn out. Get a piece of flannel fabric (black will look better) and some contact cement (elmers will do). Clean the plastic left out in the mag mount and apply the cement. Place the mount on the fabric and cut the excess fabric with an exacto knife. You may want to try other materials instead of the flannel, however they may diminish the magnetic force of the magnet. Flannel works fine (up to 100 mph!).

I read another post that said it is common in other parts of the
U.S. I guess we just don't do it in Colorado. I think it would
be better, however, to say CQ instead of "blah blah blah monitoring."
It just seems more to the point. Don't ya think?

> novice and still not on the air!!)

Robert: I have an HW-16 (I don't have the vfo!). Heath can still supply
manuals. The HW-16 has a built in vfo for rcv only. The external
vfo is only used in transmit. You must be sure that you are transmitting
and receiving on the same frequency! The back of the HW-16 has an RCA
phono jack for the signal from the vfo. It also has an octal socket
(like a tube socket) for supplying power to the external vfo.
If you need more help, send me your e-mail address.

I think I want to get into amateur radio, and my son is also
interested. How do a couple of dummies get started? What are
the costs? How hard are the license tests?
I would probably use the radio more when backpacking or bike
camping, are thaere any problems there?
I do not know what I need to ask, so please provide any info
which would be helpful in deciding wheather amateur radio
is worth it for me and my son.
PLEASE RESPOND via E-MAIL.

>between F and C? I can't recall the formula (or where to find it), and
>would just like a way to rapidly convert between the two scales when
>in QSO.

Art...we have been living with this for more than a decade here in
Canada...a VERY rough quick conversion is double the C and add it to 32 F.

Example: 10 degrees C x 2 = 20 + 32 =~ 52 degrees F.
10 degrees C is actually 50 degrees F but you can see how close it is.

Hope this helps....Rob

Heh, heh, an even easier way to solve the whole problem would be for
us Americans to just drop F, then there would be no need for conversions.
(Easy for me to say--I was trained as a chemist. What the heck is
degrees F?? ;-) Does anyone in the world besides us use F??

I have just been notified that I was asleep at the wheel. The
battery in question is a 10-cell (12.0V) and thus, you want to stop
when it goes to 10.0V, not 12.0V. Whoops!

>
>it will get cycled. But, I would be curious to see what your

>you'll get more capacity.

Same problem. Substitute 10.0V for 12.0V.
Gotta get a new CPU for the space above the shoulders.

-Ken

p.s. for you electrochemically inclined, the reason you need to charge
to such a high terminal voltage and evolve oxygen at the positive electrode
to achieve full charge is that the equilibrium potential for the
Ni(3+)/Ni(2+) combination is 1.33V ref. hydrogen electrode in KOH, while
it only takes 1.23V to split water. So, in order to run at equilibrium,
you are already getting oxygen evolution. You need an overvoltage to
overcome polarization and kinetic effects.

4781. IPS Daily Report - 29 June 94

Newsgroup: rec.radio.amateur.misc

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 29/2330Z JUNE 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 29 JUNE AND FORECAST UP TO 2 JULY

IPS Disturbance Warning 17 was issued on 22 June and is current for
interval 24 June to 4 July

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 079/019

GOES satellite data for 28 June
Daily Proton Fluence >1 MeV: 5.5E+05
Daily Proton Fluence >10 MeV: 1.4E+04
Daily Electron Fluence >2 MeV: 2.8E+07
X-ray background: A4.6
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
30 June 01 July 02 July
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 080/020

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 28 June
Learmonth 17 3433 2433
Fredericksburg 20 17
Planetary 25 15

Observed Kp for 28 June: 4223 3335

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
30 Jun 16 Unsettled to active.

01 Jul 16 Unsettled to active.
02 Jul 16 Unsettled to active.

2C. MAGNETIC COMMENT
Resurgence of geomagnetic activity observed yesterday.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
29 Jun normal fair fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
30 Jun normal fair poor
01 Jul normal fair poor
02 Jul normal fair poor
3C. GLOBAL HF PROPAGATION COMMENT
Geomagnetic activity did not decline as expected. HF conditions
at high lats remained degraded.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T index for 29 June: 26

Predicted Monthly T Index for June is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
30 Jun 20 Near predicted monthly values.
01 Jul 25 Near predicted monthly values.
02 Jul 25 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Geomagnetic activity unexpectedly increased again, no significant
depressions expected (winter). However, degraded HF comms quality
expected, especially during local night.

4783. VOX for 2way radio in motorcycle helmet

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-29 23:17:41 UTC
From: cecil_walker@ccm.hf.intel.com
Message-ID: <2usvm9$af@chnews.intel.com>
Source record: 264233
Cross-posted to: rec.radio.amateur.misc,rec.motorcycles.racing,rec.ham-radio.misc

Does anyone know of a VOX (Voice Operated Transmit) unit that I can place onto my Yaesu FT-470 HT so I can place my headset and mic into my motorcycle helmet?

Please respond to:

cecil_walker@ccm.hf.intel.com

73s, Thanks, N7LTD

isn't this one of the questions that you could be asked when going for
your Licence ????

Try: FCC Gettysburg, PA

(Sorry, No Zip code handy)

No need to have a table nor remember formulas. We know the relationship
between F and C is linear so we can start with the basic linear
equation y = mx + b where m and b are constants we need to
determine. Our function y needs to map 0C to 32F and 100C
to 212F. So we start by setting x = 0 and y = 32:
32 = m0 + b which gives b = 32. So now we have
y = mx + 32. Next, set x = 100 and y = 212:
212 = 100m + 32; solving for m gives us
m = 9/5 so our C to F conversion is
y = (9/5)x + 32 or if you prefer
F = (9/5)C + 32. I'd show
the other conversion
but I've run out
of space.

4787. Let's be Careful Out There!

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-30 04:04:44 UTC
From: William_A._Kirsanoff@ccmail.anatcp.rockwell.COM
Message-ID: <9405297729.AA772945530@smtpgty.anatcp.rockwell.com>
Source record: 264239

Let's be Careful out there!

I heard something this afternoon that made me decide to post a little reminder to everyone who monitors a public safety frequency with their amateur radio:

Here in Orange County, CA, all police and sheriffs units monitor a county wide "red" frequency. Red is a popular frequency for hams and scanner buffs to listen in on, that's where the action was during the infamous "O.J. Simpson parad...uh pursuit.

Today, while driving, I heard someone on the red channel's output frequency pounding DTMF tones. It did not seem that they were trying to jam, it sounded very much like someone trying to control a repeater. The person pounded out a 5 digit code, waited, tried again, waited, tried another code . . . After a longer wait, they were back again, clearly seeming to be carefully trying to send a control sequence and not understanding why it didn't work. Since this was on the output only, it seems the control operator was not aware of the situation, they normally say something like "Unit on red?" when someone starts keying their system. That usually wakes up the person doing it. :-) Eventually, a patrol sergeant decided to ask for a radio check on red. That seems to have awakened them, the tones stopped.

Now the reminder: Be careful when using a transmit capable radio to monitor public safety frequencies! If your radio supports it, program an odd split so that if you do inadvertently transmit, it will be in the ham bands. This person was clearly not paying attention to what they were doing, but accidents do happen. This type of accident could land you a fine and license suspension. If someone is injured because you were messing around on the police band, the little mistake becomes a felony! No kidding!

I feel better now, thank's for reading. :-)

NOTE: The Effective Sunspot Number for 28 JUN 94 was 30.1.
The Full Kp Indices for 28 JUN 94 are: 4- 2- 2- 3- 3- 3o 3o 5-
The 3-Hr Ap Indices for 28 JUN 94 are: 21 7 6 14 11 15 15 37
Greater than 2 MeV Electron Fluence for 29 JUN is: 4.3E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low. However, flare frequency
increased over the last 24 hours. Region 7742 (S09E42) produced
occasional small subflares, the largest a B9/0F at 1445Z. A
weak delta remains in the leader spots. The other spotted
region visible, Region 7743 (S10E54), was quiet. Other activity
of interest included an eruptive prominence from N10E90 at
approximately 1335Z.

Solar activity forecast: solar activity is expected to be very low. Region 7742 may generate an isolated C-class event should further development occur.

The geomagnetic field varied from quiet to minor storm levels. Local nighttimes had the most disturbed periods. The greater than 2 MeV electron flux was at moderate to high levels.

Geophysical activity forecast: the geomagnetic field is expected to be generally active, with nighttime substorms persisting through the interval.

Event probabilities 30 jun-02 jul

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 30 jun-02 jul

A. Middle Latitudes
Active 40/40/40
Minor Storm 30/30/30
Major-Severe Storm 10/10/10

B. High Latitudes
Active 30/30/30
Minor Storm 40/40/40
Major-Severe Storm 20/20/20

HF propagation conditions were normal over the low and middle latitudes. High and polar latitudes were also mostly near-normal, although night-sector substorming produced occassional minor signal degradation during the local night time. Similar conditions are expected for the next 72 hours.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep

V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Well, the formulas are pretty complex, but the best place to start learning about propagation is from the book "The Shortwave Propagation Handbook," put out by CQ magazine. Well workth the money.

Gad - 20 years have flown by. I can remember when Orange County and
all cities within the county moved from 45 Mc up to UHF back in 1974.
What a mess that was trying to get used to all those channel colors.
Red, Orange North, Orange South, White, Blue, a dozen Greens. Each
public service member received a little orange book to keep in
their shirt pocket to help sort out the confusion. I've still got
mine somewhere. We had a good system - it was the only county in
the nation that had city and county-wide coordinated communications -
police, sheriff, fire (yea!), lifeguard, harbors, military police,
animal control, all overseen by one agency known over the radio
as Control 1 (nicknamed Dog-Patch). You couldn't sneeze without
Control 1 knowing about it. I was told that many counties across
the country started modelling their communications after ours :)

From a flyer a friend gave me:

Indianapolis Hamfest
host to the
ARRL Central Division Convention

July 9 & 10, 1994

Indiana's Largest Ham Radio and Electronics Flea Market

Hamfest Hours:
Saturday 6AM - 5PM EST
Sunday 7AM - 3PM EST

Overnight camping available
Commercial exhibits and forums
Indoor and Outdoor flea market
Major Prizes
Homebrew contest
Transmitter hunts

Easy access, I-465 & I-74, at the Marion County Fairgrounds

ARRL Central Division
Convention Banquet
Saturday Evening, July 9 (no time given on flyer)

For more info, write:
Indianapolis Hamfest Association
P.O. 11776
Indianapolis, IN 46201

>be better, however, to say CQ instead of "blah blah blah monitoring."
>It just seems more to the point. Don't ya think?

To a certain extent, I would agree. However, many times, I come on
with "AG0N monitoring", not as a CQ, but as a simple comment that I am
back in the vehicle, in case someone had been looking for me while I
was away from the radio. Most of the time, this in no way implies
that I want to talk to someone, it is just to let them know I'm there.

I fully agree that if CQ is what you mean, CQ is what you should use.
It just makes good sense.

W3ASK's handbook is a good first start, although it's fairly basic,
and unfortunately rather dated (1979). I've heard rumors of an
updated version being in the works.

If you're really interested in the math, I'd recommend:

Ionospheric Radio Propagation, Kenneth Davies, National Bureau of
Standards Monograph 80, 1965, 470 pages
or
Ionospheric Radio, Kenneth Davies, Peter Peregrinus Ltd, London,
1990, IBSN 0 86341 186 X, 578 pages

The first is almost impossible to find these days, except
perhaps in a good library. The second is available, but (like
all low-production technical books these days, expensive !!) There
is material in the monograph which is not in the 1990 rework, so
one should really have both. These are deeply technical, not for
the faint hearted.

Also, a brand new book:

Radio Amateurs Guide to the Ionosphere, Leo McNamara, Kreiger
Publishing, Malabar, Florida, 1994, 166 pages.

This is a large-format paperback which is a rework of the
hardcopy book, The Ionosphere, by the same author, with some
additional material of interest to hams. You can purchase it
(ca $40) directly from Kreiger. I don't have their phone nr
handy, but their address is PO Box 9542, Melbourne FL 32902.
It's a little less mathematical that Davies' books, hence an
easier read, but still very valuable. I recommend it highly.

You want to get and hang onto anything you can find written by Bob Brown, NM7M; the guy's a genius. He has a paper, "Long-Path Propagation" which is well worth reading. (Available from NM7M for the cost of printing, $5 or $10 I think).

Lastly, I'd recommend getting a copy of Miniprop Plus 2.0, the canonical propagation program by W6EL, and using it a lot. That will teach you a great deal. Miniprop is (IMHO) by far the best of the prediction pgms available to amateurs. And Shel is a heck of a nice guy. One can sometime run across Bob and Shel chatting on 40m. See Miniprop adds in QST, CQ, etc.

I also have several pieces of s/w from the Solar Teresterial Dispatch folk, including their new Skycom. Skycom is gee-whiz, but expensive, and I have yet to see it do anything actually useful (as opposed to merely cute.)

Finally, you might consider a periodic prayer to the Sun Gods, for some spots once in a while, so that propgation becomes more than a theoretical subject... Next couple of years are gonna be pretty grim in this regard. See pg 128 in the July CQ for a nice graph on when things might start getting fun again.

>(Not what he meant, but he did say it...)

That implies nothing of the sort. It implies that you may continue to
operate until you either recieve your renewed license or the FCC notifies
you that your application for renewal was denied.

Jeez, is it that complicated? Pretty crystal to me. You must be one of the
many who are misinterpreting the 2nd Amendment of the Constutution too...

|>be better, however, to say CQ instead of "blah blah blah monitoring."
|>It just seems more to the point. Don't ya think?

I would actually distinguish between the two types of call.

If I heard someone say "blah blah blah monitoring", I would probably not
go back to them unless I knew them, and wanted to talk to them about
something specific. (I think of this as an indication of their presence
on the frequency rather than an open invitation to chat --- an action that
strictly speaking is not permitted according to the UK license.)

A general CQ I interpret as an invitation for _anyone_ to respond, so I might.

Does anyone agree with that?

David (GM0SYA)

From: dstock@hpqmoca.sqf.hp.com
Message-ID: <Cs7EM1.BL9@hpqmoea.sqf.hp.com>
Source record: 264294

Alan Bloom (alanb@hpnmarb.sr.hp.com) wrote:

: The laws of physics show no such thing. It is theoretically possible
: for a small loop to be 100% efficient. It's true that it's hard to
: approach that ideal in practice, but the Isoloop comes impressively
: close.

A number of bad loops with lots of joints and sliding-contact
capacitors have created a folklore that all capacitor-loaded small loops
must be bad, very bad. It's famously difficult to overcome bad press.

Given the differences between horizontal and vertical mounting, I
think AEA shot themselves in the foot (or more vital area?) by filling
the world with photos of their thing deployed horizontally. Quite a lot
of people don't read but just look at the pictures :-)

100% efficiency can be approached, and the result on transmit is
easily understood; all the watts you stuff up the cable get radiated.
On receive, it is possible to get different levels of output from
different 100% efficient, perfect, lossless antennae. The difference is
in the effective capture area of different designs. The idea of antenna
reciprocity is founded on a pathetic algebraic fudge by comparing to a
half-wave dipole, and then sticking a frequency term into the standard
equations for path attenuation. Path attenuation is not directly freq
dependant, the term is a fix for the fact that at higher frequencies,
half wave dipoles are smaller and have a smaller capture area, so
collect less power from a given power flux density. I'd much rather see
antenna effects assigned to the antenna, not the path. It makes a simple
subject very confusing for beginners.

Hobby horse done with.

On RX smaller loops, still lossless, would yield smaller outputs,
think of a range of 100% efficient solar cells, all of different sizes,
operated side by side in the same lighting conditions. On the low
bands, the fight is not to get enough signal, but to try to get less
noise. Loops make rotatable low band antennae possible, to allow nulls
to be oriented onto QRM sources to help reception. On high bands in
small signal conditions, then a small antenna becomes a problem, given
limits on Rx sensitivity.

Someone with little space has little choice, and a loop is a prime
candidate. Even so, it is worth their while to find out about how to
pick an efficient one and how to orient it.
Someone with plenty of space and big antennae can still benefit from
some loop characteristics, it is an antenna worth having for RX when

conditions get difficult with QRM, especially on LF. It takes an open mind and a willingness to risk being seen using something that looks embarassingly unimpressive.

: As I said before, however, I am not a big Isoloop fan. I still think
: $300 is a lot to pay for an antenna that performs almost as well as a
: dipole. But for some situations, it might make sense.

A crazy price to pay for something that can be built from junk, and it sugically removes the fun and educational dimensions.

: That criticism might be valid for some antennas on the market (the
: similarly-named "Isotron" is one that comes to mind), but the Isoloop
: works as claimed and is a perfectly reasonable antenna to use.
: AL N1AL

I noticed that the chap who criticised the isoloop had no idea what the tuning box did. Would he accept the criticism of his favourite antenna by someone else who bought one, put it up (possibly oriented the least effective way) and had no idea of the tuning of element lengths ?

I'd rather have a quad or beam than a high band loop, loops are not perfect, and not up to a good dipole, but are not as bad as some people suggest. They also have a couple of useful properties.

I met that Maxcom dummy load resistor +whip thing at G3RJV's famous QRP vicarage Christmas party, with a room full of QRPers helpless with laughter. Some folk Do fool enough of the people enough of the time, I suppose.

Cheers
David

So in the commentary (where you did not assume that timely submittal of an application was implied), you thought it meant that the FCC might send you a renewed license [the part about "...until you eventually receive your renewed..."] without submitting an application. Why didn't you ding him on that? If I couldn't see your two last names, I'd suspect you were siblings. You sound just like my children.

Source record: 264256
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I bought this at a thrift store. I'va always wanted one. The only qustion
I have is, what is it? Front panel says:

Lotus FM Receiver
From left to right, it has
Audio Alert Switch leds for Pwr, Tx, Rx, Grace, Adj, OK

On back it has from left to right:
DB-25F labeled "from computer", a screw-on connector labeled "Antenna 75
Ohm", and an Ethernet-like port labeled "Data in BNC".

On bottom, it says:

Lotus Information Network Corp
Burlingame, CA
Model No. 109-13011XX
Serial No. M1302620

And it has a sticker that says : "ID# 34052"

It's 6 1/4"W x 1 1/2" H x 9 1/2 " D.

When I hook it up to a serial connection on the computer, the lights flash,
but I don't know what is is / does. Anyone have any ideas?

All pointers appreciated. Mail me and I'll summarize.

Thanks!

dave.

For all the idiots out there who cannot read:

The commentary was separated from the regs. The commentary did not mention anything about submitting an application. (The regs did, but that is a separate issue.) Th commentary was clearly stating an either or situation, with nothing at all about an application being submitted. The original reply was meant as a joke to point out that it *should* have been included. (But, it wasn't.)

Don't accuse someone of not being able to read what is not written if you are unable to catch the sarcasm that was virtually leaping of the page (or screen) at you!

Some people should quit griping on every little thing someone says as a joke and GET A LIFE!!!!!!!!!

|>
|> Poor Jeff, he was asking for advice on how not to scratch his car paint and
|> ends up with a hole in the roof!
|>
```

I thought it was very good advice. Some people use magnetic mounts so they can easily move from car to car - or be able to avoid theft. For those folks magnetic is best. Other folks say they don't want to deface/devalue their cars by making a hole, so they use magnetic mounts. Later, they have scuffing and scratching problems. Sometimes vandals give the cord a yank and really mess things up.

I opted to drill a hole. Vandals are more likely to leave it alone if there is not a handy cord to yank. The hole does not devalue the car if you plug it with a cellular antenna when you trade/sell it. If a dealer tries to mark down your trade, find a good dealer.

On my van, vandals would have to climb up on the hood or roof so they are likely to look for easier targets. Bye...

: > : but these are not the frequencies (about 1000 Mhz) used by ham operators.

The known and accepted hazard is mostly to people physically working on the
antennas and equipment. Microwaves are dangerous because energy is
easily contained in a small volume. For example, 25 watts concentrated
in a little piece of metal will melt tin (called soldering irons).
Yet a 25 watt space heater is pretty much useless for heating even a
tiny apartment.

: >
: > Could you talk about this a little bit more? What if your house is located
: > near teleco microwave towers? Could it be harmful?

: If you're in line of site of and in the path (direct or 'knife edge
: refraction from a mountain as was in Leukemia Valley in Northern NJ)
: then you can be in serious trouble. Generally the beam width is small and
: as long as the antenna is high enough over head it probably isn't saturating
: anything below.

Consider this example, you have a big 15 ft dish antenna with a 0.6 degree
beamwidth. Thus, over the distance of 1 mile, the radiation is mostly
concentrated in an area with a radius around 30 ft. Thus, if you are
running a 100 watt transmitter, or 10,000 mW, the power density is
0.038 mW/cm^2. At a radius of 60 ft, the power density is probably down
by a factor of 100. Thus, if the antenna were pointed at another antenna,
you probably wouldn't be in the region of greatest power density, unless you
were working on that antenna or flying between the two.

Now, most antennas don't have as sharp a beamwidth. This means the
radiation is spread over a wider area, but you don't have as high a
peak power density.

It may be counter-intuitive, but things like little horn antennas
are actually more hazardous than big dish antennas. The opening of
a little horn antenna may have very high field strengths. On the other
hand, that big dish antenna may not have high field strengths anywhere
except at the dish feed (again, that little horn antenna). This is
usually less dangerous, since people tend to associate big dishes with
danger and tend to keep away. Popping your head *inside* unfamiliar
mechanical structures is often unwise to begin with.

An exception may be periscope antenna systems, which may be banned by those worried about legal/safety problems. What you do is you mount the dish on the ground and bounce the signal off a reflector mounted on the tower. Obviously, some vandal inside the fence may easily expose herself to strong fields.

One Sunday morning STS-58 came over my house in Orlando, Florida. I had been tracking it on NASA Select TV all morning. I got a great copy of KC5ACR talking to Panama and other stations in the southeast. I tried to contact them but there were too many other HAMs in there.

I sent a position and signal report to ARRL for my QSL card about 8 months ago! To this day I have still not received it.

Why does it take so long just to send out cards?

Has anyone out there had this same problem?

I just rebuilt a mag mount purchased at a swapfest for $2 and ran
across the perfect stuff for the bottom:

At the local supermarket, I found a package (two 8-1/2x11 sheets)
of plastic for laminating cards, pictures, etc. It is reasonably thin,
almost too thin for laminating, but has an adhesive backing. Rough
out a piece, stick it on and trim with scissors or a sharp knife.

Use some of the remainder for laminating a copy of your license!

Ignore those replys suggesting trading minor scratches for a
permanent advertisement of radio gear in your vehicle.

4812. help

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-30 15:17:48 UTC
From: mikel@alpha.ee.ufl.edu
Message-ID: <2uunn0INN7kj@no-names.nerdc.ufl.edu>
Source record: 264265

Hi all:
I have had a rather destructive weekend for my 2m
gear and hoping that someone can give some help / suggestions.
In my shack I HAD :-(both an OLD HR2 crystal controlled rig and
an ICOM 27A. I usually use the HR2 for local repeater work and
the 27A for satellite and packet work. On Friday evening I was
chatting with a local friend on our repeater, and after a few
minutes into the QSO I began to notice that when I would TX that
a TV in the room would RX a lot of interference. A few more
transmissions and then the rig would not TX any more but would
still RX. At the time I figured no big deal, it was old rig and
I had had to repair it before. BUT.....Then on Sunday I was trying
to use the IC27 (albiet in an unusual way) and this rig
died in about the same manner. I must say that I was trying to
use the IC27 for CW (its really an FM rig). I had hooked a
key to the PTT lines and was communicating with another amateur
in order to have him evaluate the signal quality. We had
about a 5 minute QSO which consisted of my changing the mic
connector back and forth from CW to FM. I changed back over
to the CW connector and then nothing! Rig still RX but will
not transmit. I called ICOM to see if there would be any
problems with working the rig in this manner, and their
technical support person felt that it would not harm the rig.

My antenna setup is pretty simple, from a single push-up pole
I have a 2m 1/4 wave ground plane at the top, and a 2m 4 el.
beam about 6 ft below that. One end of a 40m dipole is also
connected to the top of the pole with about 2ft of nylon
rope. And RECENTLY added a 10m sloper also connected to the
top of the pole.

So heres my question, did Murphy just get me all at once, or
are these things inter-related? Could the addition of the
10m dipole have caused this type of destruction. I havent
recently checked the VHF ant SWR but when installed they were
both 2:1 or below. Possibly I killed the IC27 because I was
changing mic connections with the power still on? Maybe the
ICOM couldnt really handle being operated in CW?

Anyway the rigs are all under repair, and I want to hear
what some of you think BEFORE I set them back up!

Thanks for any help, es 73 de Mike n4oly

Why not have your thermometer calibrated in both C and F? You can use
it as a nomograph AND get the right temperature. I know the USA is
about the only country left that uses degrees F, but even here you can
find dual-calibrated thermometers even in the dimestore.

Message-ID: <SPIKE.399.2E12F19A@EESTAFF.watstar.uwaterloo.ca>
Source record: 264270

The interested in Amateur Radio has certainly changed with the new exams.
Many new amateurs have studied with the help of a course put on by the local
amateur radio club/association.
Most courses have a high level of hands on demonstration and a high level of
user protocol.

However: Listening to the new basic license amateurs indicates a need for
more understanding of the technology they are working with.
Maybe three written exams could be considered!
ie:
BASIC exam: As the present one.
Still 6 metres and up with 50 watts maximum (now 250 watts).
No packet.

INTERMEDIATE: Now the advanced. Add more safety, tower installation,
more antennas theory (concepts) and safety.
Still 6 metres and up with 250 watts (present basic at
250 watts).
Add packet.

ADVANCEDED: More on high power, repeater control, safety, grounding,
antennas.
Power to 1000 watts (present advanced).
More repeater practical.
Add packet sysop.

CODE: These two exam levels 5wpm & 12 wpm seem to be ok.
The 5wpm gets one started with code.
Many of the new basic certificates start to work on 5wpm
within the year.

|> 73 de Art, N0OQS

Don't have a numeric conversion chart, but there's a chart on
the wall here for the "metrically challenged":

40C - Dang hot!
35C - Really hot
30C - Warm
25C - Nice
20C - A bit chilly
15C - Cool
10C - Cold
5C - Brrr!

==========

Quite a while back I was calling CQ on 29.600 MHz F3E.

An anonymous responder said,"Do you mean CQ or do you really want to say QRZ?"

He was seemingly quite chagrined that I'd be calling CQ on 29.6 MHz.

I told him that I know what the Q signals mean and that I meant to call CQ and asked him if he knew what CQ means.

He evidentally didn't know 'cuz he never came back.

What a lid,

>>geez, people make this so complicated.

>>C = 1.8 (F-32).

Bwah hah! At least some of them got it right, though.

(I would have e-mailed him, but look at the length of
that address).

The original poster wanted to be able to tell someone
in another country what the temperature is at his place,
so it doesn't have to be highly accurate, you may as well
just subtract 30 from the F and halve it. That will be
within a degree or two, and anyway, who cares. If someone
tells me the temperature in Mongolia, I just make something
up. Or do you get an OO notice if you tell someone that
it's clear when it's actually raining?

Does anyone ever care what the temperature is 10,000 miles
away? Does anyone write it in their log? Or is it just so
that you can reply "fb ur temp OM" or "QSL the temperature
there old man"? You might just as well tell the other op
the color of your socks.

Give 'em a 599 and on to the next one, I say.

Hi there,

Does anyone know the programming technique for the MOTOROLA GP-300
commercial handheld radio. The radio has a channel selection switch
which is capbable of selecting 12 channels. The radio now is only
capbable of selecting 2 channel. Is it just a mechanical limiter on
the channel switch or there is something else in addition to that??

Motorola has some special equipment to program the radio to some
desire frequencies through the contacts on the back of the radio.
I believe it's just some serial data sending to the internal
microprocessor through those contacts. Does anyone know the protocol,
baud rate, line voltages, etc?? I really appreciate if someone can
help me with these - it's too expensive to have the factory to program
it everytime you want to change frequencies.

Thanks

>Thanks, 73s Tom WB7ASR...

The answer is no.2. Why? The HF transceiver and the 1KW RF amp are active
devices and may not be so linear, so bad freq.s could be generated within
which need filtering out. The 1KW antenna tuner is a passive and (unless you
really mess up) a linear device so what goes in frequency wise should be what
comes out. Also the tuner input offers the filter a 50-75 ohm output load
which may assist the filter's efficiency. No. 3 is not so bad a choice
given resonant 50-75 ohm antenna loads, but if you switch your tuner to
shunt or straight through position you arrive at no. 3 anyway.

Athos,

I have a TH78 and like it very much. It has good sensitivity for a HT
and it does dual-in-band very well. It is not too bad to
program, but make copies of the manual, and you will be all set.

I have found it to be very versatile and it sounds very good
on the air.

good luck and 73

CALL: N9MWB/AA

ENTRY CLASS: 1B commercial

SECTION / LOCATION: IN
Set up on the back porch of my brothers house on a lake in
Columbus Indiana.

RIG: Yaesu FT-767GX with modules for 6, 2, and 440.

ANTENNA: 60-70' Horizontal dipole up about 35', 20 meter sloper, twinlead
j-poles for 2 and 6, and no antenna for 440.

POWER SOURCE: Commercial mains

TOTAL ON-AIR OPERATION TIME: 5-10 hours. Not really sure as I worked a little,
water skied a little, swam a little, etc.

TOTAL SCORE:
4/1 SSB/CW QSOs on 6
18/3 SSB/CW QSOs on 10
73/0 SSB/CW QSOs on 15
38/0 SSB/CW QSOs on 20
60/0 SSB/CW QSOs on 40
----
193 TOTAL SSB QSOs
4 TOTAL CW QSOs
100 watts power
2 * (193 + 2*4) = 402 points

COMMENTS/LESSONS:

Remember to pay attention to which side of the sloper is up. The 20 meter
sloper worked much power than the 40 meter dipole on 20. Also I need to
get a tighter SSB filter to cut through all the QRM. I never could get
any other family member to operate, although my nephew logged for a brief
while. Also need a higher location if I want to work any VHF/UHF stations.
Being next to a lake while pretty, doesn't lend itself to line of sight
communication. Also need to remember to pick up the easy bonuses, i.e.
the ARRL message, and packet/satellite bonuses.

Had a ball!

Is it a little black box that has an antenna input and looks like a modem? If so, it is a receiver for Lotus' Signal service. It receives stock market data that is transmitted on a subcarrier of a local FM broadcast station and displays it on a PC. The bad news is that a password is required to activate the receiver, at a cost of about $250 a month.

I posted the clipart question a couple weeks ago and as promised to the inummerabe people that e-mailed me asking about my findings,I'll make public what I have found,wich,unfortunatly is not much :-(
The first try was the ARRL BBS's at 203-666-0578.After doing a file search,I found several ARRL related logos,like ARES,RACES and so on...
Thanks to a fellow ham from the UK who replied me,there is a small repository of some other radio related ham artwork available via FTP at

hpcsos.col.hp.com,I believe in the /pub/hamradio/clipart area.I found that the quality of most of the drawings to be quit amateurish and of low quality,but hey it is better than nothing!
Finnaly but not last,I combined all of this findings into a new files section of the BBS I run here in DC,Gallery's BBS at 202-298-6009.The clipart is in the Ham Art file section.
Hope you'll find this info usefull and keep your fingers crossed for the stuff from the above message to be availale soon :-)

(2).

Reason:

1) The harmonics come from the amplifier, and it is best
to get rid of them as soon as possible,

2) The REAL reason. Filters are designed to run into
matched loads. The best filters are doubly terminated,
and are designed to be fed with 50 ohms and run into
a 50 ohm load. The output of the TX should be 50 ohms
and the INPUT of the tuner should be 50 ohms.

The path between the antenna and the tuner is resonant
but not with 50 ohm terminations. (If it were, you
wouldn't need a tuner). There could be huge circulating
currents in the feedwire which the filter is not capable
of handling, and the filter will probably not give
the designed filter characteristics when run into a
non 50 ohm load.

-Ken

4835. Address for Wyle Electronics

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-30 21:46:34 UTC
From: bsn@ziggy.ph.utexas.edu
Message-ID: <2uvefq$ica@geraldo.cc.utexas.edu>
Source record: 264288

I would like the address and tel/fax no for Wyle Electronics.

Thanks,
Barry W5KH

Oops ! A missprint. It should read C = (F - 32)/1.8.

I went with a local club which ran a 9A station. Had a ball but
learned a big lesson. DO NOT bring your girlfriend with you. I had
to leave early since she got bored. C'est la vie.

I think "CQ from KG0CZ" is a GREAT idea, much more to the point than the backhanded, too-subtle, "KG0CZ monitoring" call *if you are wanting to strike up a conversation*. Unfortunately, that's not the prevailing style here in CO. So, we need a leader to lead us into new and better operating habits. Who'll be the first to risk embarassment and shame and call CQ on the repeater (not the long-winded form, just the above form)??

I still agree (maybe it's inconsistent) with keeping Q signal use to a minimum on VHF.

-Paul C. KG0CZ

4840. 900 MHz

Newsgroup: rec.radio.amateur.misc

Has anyone built anything for the no-license required 900 MHz band?

I assume FCC type acceptance would not be required for home-brewed, albeit compliant, gadgets for personal use.

4841. IPS Daily Report - 30 June 94

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-30 23:34:55 UTC
From: rwc@flare.syd.ips.oz.au
Message-ID: <1994Jun30.233455.7082@ips.oz.au>
Source record: 264292
Cross-posted to: aus.radio,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 30/2330Z JUNE 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 30 JUNE AND FORECAST UP TO 3 JULY

IPS Disturbance Warning 17 was issued on 22 June and is current for
interval 24 June to 4 July

1A. SOLAR SUMMARY
Activity: low

Flares Max Fadeout Begin End Freq. Sectors
M2/-- 2124UT possible lower East Pacific/
North American

Observed 10.7 cm flux/Equivalent Sunspot Number : 083/024

GOES satellite data for 29 June
Daily Proton Fluence >1 MeV: 1.1E+06
Daily Proton Fluence >10 MeV: 1.4E+04
Daily Electron Fluence >2 MeV: 4.3E+07
X-ray background: A4.4
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
01 July 02 July 03 July
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 085/027

1C. SOLAR COMMENT
Rgn 7742 produced the M2 flare. It has exhibited moderate growth
in recent days, but is not currently expected to produce further
significant activity.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 29 June
Learmonth 19 4434 3333
Fredericksburg 16 22
Planetary 18 21

Observed Kp for 29 June: 4543 3344

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
01 Jul 20 Unsettled to active.
02 Jul 20 Unsettled to active.
03 Jul 20 Unsettled to active.

2C. MAGNETIC COMMENT
None.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
30 Jun normal fair-normal poor-fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
01 Jul normal fair-normal poor-fair
02 Jul normal fair-normal poor-fair
03 Jul normal fair-normal poor-fair
3C. GLOBAL HF PROPAGATION COMMENT
Continuing geomagnetic activity may degrade propagation conditions at
mid and high lats.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T index for 30 June: 28

Predicted Monthly T Index for June is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
01 Jul 25 Near predicted monthly values.
02 Jul 20 Near predicted monthly values.
03 Jul 25 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Regular Sporadic E layer and occasional Spread F may have degraded
local propagations conditions yesterday. Similar conditions are
expected for today.
